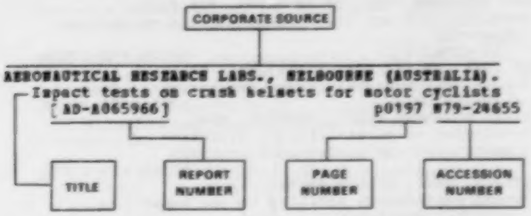
CORPORATE SOURCE INDEX

AEROSPACE MEDICINE AND BIOLOGY / *a continuing bibliography* JANUARY 1980

1979 Cumulative Index

Typical Corporate Source Index Listing



CORPORATE SOURCE
AERONAUTICAL RESEARCH LABS., MELBOURNE (AUSTRALIA).
Impact tests on crash helmets for motor cyclists
[AD-A065966] p0197 N79-24655
TITLE
REPORT NUMBER
PAGE NUMBER
ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document listed (e.g., NASA report, translation, NASA contractor report). The page and accession numbers are located beneath and to the right of the title, e.g. p 0197 N79-24655. Under any corporate source the accession numbers are arranged in sequence with the *IAA* accession numbers appearing first.

A

ACADEMISCH ZIEKENHUIS ST. RAPHAEL, LEUVEN (BELGIUM).

Follow-up and transversal study of vital capacity and FEV sub values among personnel of the Belgian Army forces p0028 N79-11796

CIVIL AEROMEDICAL INST., OKLAHOMA CITY, OKLA.
The morbidity experience of air traffic control personnel, 1967-1977
[AD-A056053] p0051 N79-12696
Reactions of methamidophos with mammalian cholinesterases
[AD-A058683/4] p0051 N79-12698
Visual performance assessment through clear and sunscreen-treated windows
[AD-A059750] p0080 N79-14775
Assessment of factors possibly contributing to the susceptibility of sickle trait erythrocytes to mild hypoxia. Volume 1: Design considerations and research protocol
[AD-A059412] p0084 N79-15577
A method to evaluate performance reliability of individual subjects in laboratory research applied to work settings
[FAA-AM-78-37] p0123 N79-17547
The measurement and scaling of workload in complex performance
[FAA-AM-78-34] p0125 N79-17558
Stress in air traffic controllers: A restudy of 32 controllers 5 to 9 years later
[FAA-AM-78-40] p0144 N79-18581
Characteristics of medically disqualified airman applicants in calendar years 1975 and 1976
[FAA-AM-78-25] p0144 N79-18582
Time-sharing ability in complex performance: An expanded replication
[FAA-AM-78-33] p0145 N79-18591
A comparison of three models for determining test fairness
[AD-A066586] N79-25751
The development of the ATC selection battery: A new procedure to make maximum use of available information when correcting correlations for restriction in range due to selection
[FAA-AM-78-36] N79-25752
Index to FAA Office of Aviation Medicine reports: 1961 through 1978
[AD-A067983] p0240 N79-26773
The optical properties of smoke-protective devices
[FAA-AM-78-41] p0242 N79-26784
A lower body negative pressure box for +Gz simulation in the upright seated position
[AD-A069326] p0259 N79-28868
The selection of air traffic control specialists: Two studies demonstrating methods to insure an accurate validity coefficient for selection devices
[AD-A068581] p0281 N79-30932
A comparison of the job attitudes and interest patterns of air traffic and airway facility personnel
[AD-A067826] p0281 N79-30933
Visual search performance during simulated radar observation with and without a sweepline
[AD-A068020] p0281 N79-30938
Effects of propranolol on Time of Useful Function (TUF) in rats
[AD-A068535/4] p0283 N79-31896
Oxygen equipment and rapid decompression studies
[AD-A070285] p0289 N79-31937
Effects of congener and noncongener alcoholic beverages on a clinical ataxia test battery
[AD-A069375] p0314 N79-33819
Laboratory performance during acute intoxication and hangover
[AD-A069373] p0314 N79-33820
Development of electrophysiological indices of neurological toxicity for organophosphate pesticides and depressant drugs
[AD-A070299] p0314 N79-33821

CIVIL AVIATION AUTHORITY, LONDON (ENGLAND).
The impact of coronary vascular risk factors on professional aircrew license loss in the United Kingdom
p0031 N79-11724
Cardiovascular fitness of pilots of transport aircraft
p0031 N79-11726

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library

Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 203)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in January 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, at the price $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 150 reports, articles and other documents announced during January 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $6.00 per document up to a maximum of 20 pages. The charge for each additional page is $0.25. Microfiche (1) of documents announced in *IAA* are available at the rate of $2.50 per microfiche on demand, and at the rate of $1.10 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.25 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.35 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $65.00 domestic; $130.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.). *Origins of Life,* vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

AEROSPACE MEDICINE AND BIOLOGY

A Continuing Bibliography (Suppl. 203)

FEBRUARY 1980

IAA ENTRIES

A80-10326 **Regulation of the energy metabolism and physiological state of the organism (Reguliatsiia energeticheskogo obmena i fiziologicheskoe sostoianie organizma).** Edited by M. N. Kondrashova. Moscow, Izdatel'stvo Nauka, 1978. 239 p. In Russian.

A collection of papers is presented concerning the investigation of relationships between intracellular and hormonal regulations of the use of oxidation substrates. Attention is given to a discussion of the phenomenon and mechanisms of alternate use of carbohydrates and lipids, as well as the role of mitochondrias in glyconeogenesis. The energetics of lymphocytes and substrate exchange between lymphoid tissue and other organs is described. The effectiveness of analyzing mitochondrial and mitochondrial-cytoplasmic transformations for evaluation of the physiological state of the body and the mechanism of pharmacological and toxic effects is demonstrated. S.D.

A80-10327 # **Alternate use of carbohydrates and lipids as a form of regulating the physiological state (Peremennoe ispol'zovanie uglevodov i lipidov kak forma reguliatsii fiziologicheskogo sostoianiia).** M. N. Kondrashova and E. I. Maevskii. In: Regulation of the energy metabolism and the physiological state of the organism. Moscow, Izdatel'stvo Nauka, 1978, p. 5-14. 17 refs. In Russian.

Intracellular regulators of energy metabolism are effective in regulating the physiological state of the body (principle of equivalence of regulatory mechanisms). Periodical alternation of carbohydrates and lipids forms the basis of biological clocks (rhythms). At the time of switching from the use of one storage to the use of another, additional influences may drastically hinder the normal periodicity of metabolic events. S.D.

A80-10328 # **Temporal organization of energy metabolism and the cellular clocks (Vremennaia organizatsiia energeticheskogo metabolizma i kletochnye chasy).** E. E. Sel'kov. In: Regulation of the energy metabolism and the physiological state of the organism. Moscow, Izdatel'stvo Nauka, 1978, p. 15-32. 15 refs. In Russian.

The paper presents a theoretical analysis of mechanisms responsible for the allosteric regulation of futile (potentially useless) cycles of energy metabolism. It is shown that the activation of phosphofructokinase production and the substrate depression of fructobisphosphatase by means of fructoso-1,6-bisphosphate - absolutely necessary for the normal functioning of carbohydrate energy metabolism - cause periodical reciprocal changes in the metabolism of carbohydrates, lipids, and amino acids. A conclusion is drawn that these changes are the only possible form of prolonged functioning of the energy metabolism containing futile cycles. S.D.

A80-10329 # **Oxidation of pyruvate in mitochondrias: Mathematical model - Regulation of the Kreb's cycle by adenine and pyridine nucleotides (Okislenie piruvata v mitokhondriiakh: Matematicheskaia model' - Reguliatsiia tsikla Krebsa adeninovymi i piridinovymi nukleotidami).** V. The study demonstrates that the energy regulation of sections (brain, liver, heart) is recovered after a specific metabolic period associated with the extirpation of the tissues. Variation of metabolic sensitivity in a responsive tissue reflects the energetic state of mitochondrias in tissue cell, as well as the tissue-specific characteristics of metabolic regulation in the cell. The temperature regime affects the state of the respiratory chain in the cell, the activity of its various sections, and the interaction with oxygen-dependent extra-mitochondrial processes. S.D.

Blood lymphocytes are cytochemically analyzed for succinate-dehyrogenase (SDH) activity in children, adolescents and middle-aged individuals, as well as in physically well trained athletes and untrained persons. It is shown that during the growth and development period, the SDH activity is enhanced, whereas it diminishes in the aging process. Empirical data are used to develop a theoretical curve which shows the trend of changes in the SDH activity during human lifetime. Systematic physical exercises inhibit the involute changes in SDH activity. As for athletes, the effect of SDH changes on muscular work depends on the fitness level. S.D.

A80-10344 **Behavioral measures of aircrew mental workload.** R. C. Williges and W. W. Wierwille (Virginia Polytechnic Institute and State University, Blacksburg, Va.). *Human Factors,* vol. 21, Oct. 1979, p. 549-574. 154 refs. AF Project 2050; NAVAIR Task 340F.

Behavioral research literature pertaining to the measurement of aircrew workload was classified into general categories of subjective opinion, spare mental capacity, and primary task metrics. Fourteen specific classes of workload measures related to these general categories were reviewed specifically in regard to aircrew workload assessment in the flight test and evaluation. Each class of measures was summarized in terms of background, applications, and implications for research and implementation. It was concluded that no one, single measure can be recommended as the definitive behavioral measure of mental workload. Due to the multidimensionality of workload, it appears that the most promising assessment procedure should include multiple measures of subjective opinions, spare mental capacity, and primary task measures as well as physiological correlates. (Author)

A80-10345 **Physiological measures of aircrew mental workload.** W. W. Wierwille (Virginia Polytechnic Institute and State University, Blacksburg, Va.). *Human Factors,* vol. 21, Oct. 1979, p. 575-593. 81 refs. AF Project 2050; NAVAIR Task 340F.

Physiological measures of aircrew mental workload were divided into fourteen specific classes. Each class was then summarized in terms of background, applications, and implications for research and implementation. It is concluded that several physiological measures appears promising, but that more research is needed to provide convincing evidence of viability. Physiological techniques can, however, be combined with other workload assessment techniques to provide a more complete understanding of the workload associated with given aircrew tasks. (Author)

A80-10422 **The normal values of spatial velocity in the second part of QRS /A cooperative study of 229 healthy individuals/.** A. J. Chorão de Aguiar, H. Guimarães, and A. Raposo (Coimbra, Universidade, Hospital, Coimbra, Portugal). *Journal of Electrocardiology,* vol. 12, Oct. 1979, p. 381-386. 21 refs.

The spatial velocity (SV) represents the inscription velocity from spatial vectors of the QRS loop. According to Sano (1967), this parameter has exhibited a diagnostic capacity for some well-defined pathologies. Using Hellerstein and Hamlin's formula (1960), the SV has been determined from the orthogonal Frank leads in a 250 mm/sec recording. Using Simonson's criteria (1961), 229 normal individuals, arranged in seven groups according to age and sex, were used in an attempt to get normal values for the second half of the QRS loop. SV was determined in six time intervals of 2.5 msec from the 25 msec vector before the end of QRS. Significant differences were found between the values obtained from each time interval, except in the 35-37.5 msec and 37.5-40 msec vectors. On the other hand, no significant differences were found among the normal individual groups. (Author)

A80-10423 **Torso mounted electrocardiographic electrodes for routine clinical electrocardiography.** D. Diamond (Mt. Auburn Hospital, Cambridge, Mass.), D. H. Griffith (Memorial Hospital, Pawtucket, R.I.), M. L. Greenberg, and R. A. Carleton (Memorial Hospital, Pawtucket; Brown University, Providence, R.I.). *Journal of Electrocardiology,* vol. 12, Oct. 1979, p. 403-406. 10 refs.

A system of torso-mounted electrocardiographic leads similar to that proposed by Mason and Likar (1966) for stress electrocardiography is compared with the standard lead system in order to define any limitations to the more general application of the modified system. Placement of the right and left arm electrodes immediately below the outer third of the respective clavicles, the left leg electrode 4 cm below the umbilicus and the right leg electrode over the right side of the abdomen in the mid-clavicular line is found to lead to only small random differences in the ECGs recorded from those of the standard lead system, which are similar to those observed between successive standard tracings. The modified system is considered to be faster and simpler to apply than the standard system, as well as more suitable for certain clinical conditions and patients, without requiring a modification of diagnostic criteria. A.L.W.

A80-10424 **Relationship between calcium and hydrogen ions in heart muscle.** A. R. Mattiazzi, H. E. Cingolani, and E. Spacapan de Castuma (La Plata, Universidad Nacional, La Plata, Argentina). *American Journal of Physiology,* vol. 237, Oct. 1979, p. H497-H503. 35 refs.

Experiments were performed on cat papillary muscles excised from the right ventricle of cats anesthetized with intraperitoneally administered sodium pentobarbital. The objective was to study the nature of the inverse effect of H(+) and Ca(2+) ions on cardiac performance. Evidence is presented that in cat papillary muscles this antagonistic action cannot be characterized as competitive. In particular, the experiments support the view that acid-base alterations are negative inotropic interventions in which a dissociation between maximal rate of force development and maximal velocity of relaxation occurs. The findings suggest that H(+) ion might have an effect on the relaxation process. S.D.

A80-10521 **Cardiac reflexes in normotensive and spontaneously hypertensive rats.** P. Thoren, E. Noresson, and S.-E. Ricksten (Goteborg, Universitet, Goteborg, Sweden). *American Journal of Cardiology,* vol. 44, Oct. 22, 1979, p. 884-888. 32 refs. Research supported by the Swedish Medical Research Council. Zanchetti (Milano, Università; CNR, Centro di Ricerche Cardiovascolari, Milan, Italy). *American Journal of Cardiology,* vol. 44, Oct. 22, 1979, p. 895-902. 38 refs.

A80-10525 **Gamma rays - Further evidence for lack of a threshold dose for lethality to human cells.** P. S. Furcinitti and P. Todd (Pennsylvania State University, University Park, Pa.). *Science,* vol. 206, Oct. 26, 1979, p. 475-477. 10 refs. Grant No. NIH-R01-CA-17536.

In experiments designed to measure human cell survival with + or - 2% accuracy it was found that low doses (21 to 87 rad) of gamma rays inactivated the colony-forming ability of cultured human cells with a probability of 0.00226 + or - 0.00012 per rad. There appears to be no threshold for the lethality of radiation to human cells in vitro. (Author)

A80-10650 **Work-science research on maximum work capacity and recovery time for informational-mental work based on the channel- and man-machine model along with superposed stress, using work in a hot environment as an example (Arbeitswissenschaftliche Untersuchungen von maximaler Arbeitsdauer und Erholungszeiten bei informatorischmentaler Arbeit nach dem Kanalund Regler-Mensch-Modell sowie superponierten Belastungen am Beispiel Hitzearbeit).** H. Luczak. *VDI-Zeitschriften Fortschritt-Berichte, Reine 10 - Angewandte Informatik*, no. 6, May 1979. 140 p. 207 refs. In German.

A80-10738 * # **The Viking mission and the search for life on Mars.** H. P. Klein (NASA, Ames Research Center, Directorate of Life Sciences, Moffett Field, Calif.). *(International Union of Geodesy and Geophysics, General Assembly, 17th, Canberra, Australia, Dec. 2-15, 1979.) Reviews of Geophysics and Space Physics*, vol. 17, Oct. 1979, p. 1655-1662. 80 refs.

Experiments conducted by the Viking mission to search for life on Mars are examined and the results of direct chemical analyses are surveyed to determine the presence of any complex organic compound. Observations taken from lander imaging and experiments from biological investigation are analyzed for pyrolytic release, gas exchange (both humid and nutrient) and labeled release (LR). Attention is given to the results in an attempt to simulate LR initial reaction, and to the implications and extrapolations of the Viking mission. C.F.W.

A80-10764 **Flight hour reductions in fleet replacement pilot training through simulation.** A. F. Smode (U.S. Navy, Training Analysis and Evaluation Group, Orlando, Fla.). In: 50 years of flight simulation; Proceedings of the Conference, London, England, April 23-25, 1979. Session 1. London, Royal Aeronautical Society, 1979, p. 58-72. 14 refs.

The 2F87F simulator was found to be an effective substitute for the P-3 aircraft in the transition training of pilots. The general conclusion of the TAEG study is that flight simulation efficiently utilized can be employed to advantage in military flight training. This is particularly so for pilot training in large multiengine, multipilot aircraft. New state-of-the-art flight simulators for these aircraft provide sufficient fidelity and capability to account for most training requirements. Safety is not compromised since transitioned pilots assume less than the aircraft commander role upon operational assignment. B.J.

A80-10774 **Simulator fidelity in the learning of complex flight tasks.** E. A. Stark (Singer Co., Link Div., Binghamton, N.Y.). In: 50 years of flight simulation; Proceedings of the Conference, London, England, April 23-25, 1979. Session 3.
London, Royal Aeronautical Society, 1979, p. 17-29. 7 refs.

The fidelity of training devices has traditionally been approached either by attempting to reproduce all of the stimuli available to a system operator in the operational task environment, or by a less expensive method based on representing only the stimuli considered essential to a given task. Neither approach to the design and development of training devices has involved more than cursory consideration of the learning and perceptual processes associated with training. Task analyses directed at training equipment design have been devoted largely to defining the information available to the operator, but far less attention has been given to the ways in which this information is perceived by trainees at the various stages of training, or to the mechanisms by which specific patterns of information come to elicit specific responses, through learning. The necessity of considering the mechanics of learning in the development of training devices is emphasized. V.P.

A80-10925 **Numerical calculation of electromagnetic energy deposition for a realistic model of man.** M. J. Hagmann, O. P. Gandhi, and C. H. Durney (Utah, University, Salt Lake City, Utah). *IEEE Transactions on Microwave Theory and Techniques*, vol. MTT-27, Sept. 1979, p. 804-809. 18 refs.

A80-11328 # **Convective and radiative heat transfer coefficients for a clothed man.** T. Mochida (Hokkaido University, Sapporo, Japan). *Hokkaido University, Faculty of Engineering, Bulletin*, June 1979, p. 1-9. 11 refs.

The paper considers convective and radiative heat transfer coefficients for a clothed man. The convection heat transfer coefficient is determined on the basis of the clothed man-equivalent thermal cylinder using Oosthuizen-Madan dimensionless equation for mixed heat transfer (1970). The radiative heat transfer coefficient expressed by the product of the emissivity of the human surface, the temperature factor, and the Stefan-Boltzmann constant was derived by linearizing the Gebhart absorption factor, and applying it to the space between a human body and its surroundings. The effect of clothing on the radiation heat transfer coefficient is discussed, and actual values computed. A.T.

A80-11371 **Microsecond sensitivity of the human visual system to irregular flicker.** A. L. Diamond (Simon Fraser University, Burnaby, British Columbia, Canada). *Science*, vol. 206, Nov. 9, 1979, p. 708-710. 7 refs. National Research Council Grant No. A-9940.

Six experiments that were conducted to determine the brain responses to various alternating voltages of a flickering light are discussed. The stimulus response association was examined as well as the synchronous and asynchronous intervals of 32 to 512 flashes and the evoked potential alternations due to differing flash sequences. Results were found to suggest an underlying mechanism that may enhance visual detection of high frequency flicker. C.F.W.

A80-11374 **Resting heart rate in apparently healthy middle-aged men.** J. Erikssen (Rikshospitalet, Oslo, Norway) and K. Rodahl (Norwegian College of Physical Education, Oslo, Norway). *European Journal of Applied Physiology*, vol. 42, no. 1, 1979, p. 61-69. 19 refs.

The resting heart rates of 2014 apparently healthy men between the ages of 40 and 59 were measured as part of a cardiovascular survey by means of a standardized ausculation technique. Values obtained were found to correlate well with ECG heart rate determinations of 200 subjects, and to be essentially the same in all clinically observed subgroups, including those with suspected coronary heart disease and pathological angiograms. Regression analysis indicated a drop in heart rate with age of 0.126 beats/year, accompanied by an increase in systolic blood pressure of 0.75 mm Hg/year. Blood pressure and heart rate were also found to correlate, possibly providing the link between heart rate and coronary heart disease. Discrepancies between the results of the present investigation and literature values were attributed in part to different experimental techniques. A.L.W.

A80-11378 **Modeling and parameter identification of the human respiratory system.** D. M. Wiberg, J. W. Bellville, O. Brovko, R. Maine, and T. C. Tai (California, University, Los Angeles, Calif.). *IEEE Transactions on Automatic Control*, vol. AC-24, Oct. 1979, p. 716-720. 16 refs. Grant No. NIH-HL-15659.

The human respiratory response to breathing an excess of carbon dioxide gas is modeled on physiological grounds as an almost linear second-order system. The parameters corresponding to the gains, time constants, threshold, and noise powers are identified by both least squares and maximum likelihood methods. The purpose is both to find the site of action of drugs and to gain understanding of this part of the respiratory control system. It is concluded that the maximum likelihood method is necessary in cases where the noise is not white and when unbiased estimates of the gains and variances are essential, such as in drug studies and in some physiological modeling. (Author)

A80-11520 # **Animal experiment on the effects of repeated exposure to sustained Gz of moderate magnitude. I - Histopathological studies in rabbits.** C. Mizumoto, N. Nitami, K. Ohara, and R. Yurugi (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 19, Mar. 1979, p. 139-145. 15 refs. In Japanese, with abstract in English.

Normal rabbits were repeatedly exposed to sustained 3-Gz acceleration by centrifugation during 30 min/day for a minimum of three days and a maximum of 20 days. Body weight and heart rate were measured daily during centrifugation, showing changes followed by return to normal level. Several organs of sacrificed animals were examined for gross and microscopic pathologies. Microscopic examination on the 20th day of exposure to stressful acceleration revealed a mild to moderate congestion of the alveolar wall, capillary hyperemia, and plasma exudation to the alveolar cavity at the lower lung lobes; the adrenal cortex exhibited mild congestion and moderate hemorrhage. In contrast, third-day autopsy showed no histopathological changes. S.D.

A80-11521 # **Effects of exposure to hypoxic environment upon operant behavior in rats.** I. Sakurai, E. Sakaguchi, T. Sakaguchi, H. Osada, K. Ohara, and R. Yurugi (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 19, Mar. 1979, p. 147-162. 13 refs. In Japanese, with abstract in English.

Rats were reinforced for food by two types of lever-press behavior of fixed ratio for 45 sec and low-rate differential reinforcement for 15 sec under normoxic and hypoxic environmental conditions with a view toward assessing changes in the functioning of the brain by examining the alteration of operant behavior in a hypoxic environment. The results suggest a close relation between decreased food intake and functional inhibition in the cerebral cortex during exposure to a hypoxic environment. S.D.

A80-11522 # **Behavioral scientific study on T-2 flight simulator. II - Comparison of pilot workload between aircraft and simulator.** H. Hagihara, S. Aramaki, and Y. Nagasawa (Japan Air Self-Defense Force, Aeromedical Laboratory, Tachikawa, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports,* vol. 19, Mar. 1979, p. 163-174. 17 refs. In Japanese, with abstract in English.

Pilot workload of T-2 aircraft and T-2 flight simulator was measured in terms of subjective feeling, subjective scores of flight difficulties, flight score given by an instructor pilot, and heart rate. Most pilots estimated that the feeling of simulator motion was more or less similar to the aircraft motion. Simulator takeoff and landing were evaluated as more difficult than actual flight, most probably due to absence of visual cue in the simulator. Heart rate variations were greater during actual flight. High score is obtained in simulator instrument flight and actual inflight workload. S.D.

A80-11627 **A modeling approach to the assessment of smooth pursuit eye movement.** E. J. Engelken and J. W. Wolfe (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *(Aerospace Medical Association, Annual Scientific Meeting, 50th, Washington, D.C., May 14-17, 1979.) Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1102-1107. 9 refs.

A quasilinear model of the oculomotor system in the performance of a smooth pursuit tracking task has been proposed. Model parameters (gain, phase, and spectral purity) have been measured for 21 normal subjects at stimulus frequencies of 0.2, 0.4, 0.8, 1.2, and 1.6 Hz. The normal oculomotor system was found to be quite linear when tracking at the three lowest frequencies, with up to 95% of the output power being linearly correlated with the input stimulus. Data from patients with known pathology are presented to demonstrate model parameter sensitivity to oculomotor dysfunction. (Author)

A80-11628 **Effect of transdermally administered scopolamine in preventing motion sickness.** M. E. McCauley, J. W. Royal, J. E. Shaw, and L. G. Schmitt (Human Factors Research, Inc., Goleta; ALZA Corp., Palo Alto, Calif.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1108-1111. 12 refs.

The efficacy of transdermally administered scopolamine was compared with the efficacy of oral dimenhydrinate and placebo therapy in the prevention of motion-induced nausea in a vertical oscillator. Medications were administered on a double-blind crossover basis, with the order of treatments counterbalanced. A placebo effect reduced the motion sickness incidence (MSI) from 100% to 59%. Administration of dimenhydrinate reduced the MSI to 32%, and use of the transdermal therapeutic system scopolamine (TTS-scopolamine) further reduced the MSI to 16%. TTS-scopolamine afforded 73% protection against motion-induced nausea, compared to 46% protection with dimenhydrinate. The TTS-scopolamine is designed to remain in the body for 72 hours, providing advantages over intramuscular or oral administration of scopolamine, which include reduced daily dosage, and an effective alternate to the gastrointestinal tract for administrating medication at times of gastrointestinal distress. (Author)

A80-11629 * **Self-motion magnitude estimation during linear oscillation - Changes with head orientation and following fatigue.** D. E. Parker, D. L. Wood, W. L. Gulledge, and R. L. Goodrich (Miami University, Oxford, Ohio; Harvard University, Cambridge, Mass.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1112-1121. 27 refs. Research supported by Miami University; Contracts No. F615-75-C-5029; No. NAS9-14538.

Two types of experiments concerning the estimated magnitude of self-motion during exposure to linear oscillation on a parallel swing are described in this paper. Experiment I examined changes in magnitude estimation as a function of variation of the subject's head orientation, and Experiments II a, II b, and II c assessed changes in magnitude estimation performance following exposure to sustained, 'intense' linear oscillation (fatigue-inducting stimulation). The subjects' performance was summarized employing Stevens' power law R = k x S to the nth, where R is perceived self-motion magnitude, k is a constant, S is amplitude of linear oscillation, and n is an exponent). The results of Experiment I indicated that the exponents, n, for the magnitude estimation functions varied with head orientation and were greatest when the head was oriented 135 deg off the vertical. In Experiments II a-c, the magnitude estimation function exponents were increased following fatigue. Both types of experiments suggest ways in which the vestibular system's contribution to a spatial orientation perceptual system may vary. This variability may be a contributing factor to the development of pilot/astronaut disorientation and may also be implicated in the occurrence of motion sickness. (Author)

A80-11630 * **Some influences of vision on susceptibility to motion sickness.** J. R. Lackner (U.S. Naval Aerospace Medical Center, Naval Aerospace Medical Research Laboratory, Pensacola, Fla.) and A. Graybiel (Brandeis University, Waltham, Mass.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1122-1125. 21 refs. Contract No. NAS9-15147. NASA Order T-9140-E.

Two experiments were performed to evaluate the influence of vision on susceptibility to motion sickness during exposure to constant patterns of vestibular stimulation. The motion profile involved accelerating subjects at 20 deg/sec per sec to 300 deg/sec, maintaining them at that constant velocity for 30 sec, and decelerating them to a rapid stop in about 1.5 sec. The number of stops tolerated by a subject before reaching the motion sickness endpoint served as his score. In Experiment 1, subjects were tested twice with their eyes open and twice with their eyes blindfolded. They tolerated fewer sudden stops when permitted sight of the experimental chamber. In Experiment 2, the effect of having the eyes open or closed at different stages of the motion profile was evaluated. Having the eyes open during any stage of the test was more stressful than having the eyes closed, but this was especially true during the sudden stops. The findings are discussed in terms of their general implications for understanding (1) situations in which vision alone elicits symptoms of motion sickness, and (2) situations involving vestibular stimulation where vision heightens susceptibility. A80-11631 * Oxygen levels safe for continued reproduction of Drosophila in normal and hypobaric atmospheres. G. P. Kloek (Kentucky State University, Frankfort, Ky.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1126-1128. 13 refs. Grant No. NsG-801.

A80-11632 Regional cerebral blood flow in conscious miniature swine during high sustained +Gz acceleration stress. M. H. Laughlin, W. M. Witt, and R. N. Whittaker (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1129-1133. 19 refs.

A80-11633 Responses of domestic fowl to repeated +Gz acceleration. A. H. Smith, W. L. Spangler, R. R. Burton, and E. A. Rhode (California, University, Davis, Calif.; USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1134-1138. 6 refs. Contract No. F41609-76-C-0012.

The responses of domestic fowl to repeated exposures of 4 min to +6Gz (8 times daily, 5 d weekly) are reported. Survivorship curves for the test group of 48 birds divided into three response categories: mode I, highly susceptible, with all individuals dying on the first day; mode II, more tolerant, with mortality occurring within the first 20 d of treatment; and mode III, highly tolerant, with mortality occurring only after 20 d of treatment. Observations of lymphocyte frequency, an index of systemic stress, and postmortem observations indicate that this heterogeneity has a biological basis. (Author)

A80-11634 The 24-hour cycle and nocturnal depression of human cardiac output. J. C. Miller and M. Helander (Human Factors Research, Inc., Goleta, Calif.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1139-1144. 22 refs.

The NASA-developed version of the impedance plethysmographic method for the determination of left ventricular stroke volume was applied to the investigation of the daily variation of cardiovascular function. Hourly determinations of cardiac output and arterial pressure (auscultation) were obtained from two male subjects over the course of a 48-h period in the laboratory. Cardiac output displayed a strong 24-h cycle of nearly 1/min, peak-to-peak, cresting in the late evening hours. Nocturnal sleep was associated with a reduction of cardiac output characterized by a minimum in the early morning hours. It was concluded that a nocturnal, 24-h cyclic depression of waking cardiac output is exacerbated during sleep periods, and mechanisms for this exacerbation were suggested. (Author)

A80-11635 Systolic time intervals and other cardiovascular changes following leg elevation. M. A. B. Frey and G. D. Krizsa (Wright State University, Dayton, Ohio). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1145-1149. 15 refs. Research supported by the American Heart Association; Grants No. NIH-IS-07155-01; No. NIH-R01-HL-19931-01.

Cardiovascular responses were noninvasively monitored as the legs of 16 supine human subjects were passively elevated to increase return of blood to the heart. Forearm vasodilation occurred promptly as previously observed by Roddie and Shepherd (1956). Arterial pressure and heart rate were unchanged. Ventricular performance, monitored by systolic-time-interval analysis, was enhanced after a delay of approximately 6 s, an effect which lasted throughout the 40-s leg-elevation period. All affected variables returned to control levels after the legs were lowered. This delayed response could result reflexly from stimulation of receptors in the left atrial region causing an increase in sympathetically mediated contractility or directly from the Frank-Starling mechanism in response to increased left ventricular filling. A80-11636 Noise dosimeter measurements in the Air Force. T. M. Fairman and D. L. Johnson (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, Ohio). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1150-1157. 5 refs. Research sponsored by the U.S. Environmental Protection Agency and U.S. Air Force.

The paper presents the results obtained from the use of personal noise dosimeter monitoring devices, operating on the Air Force rule of 4 dB per doubling time and 84 dB(A) criterion level, to determine the occupational noise exposures of Air Force personnel working in hazardously noisy jobs. It is reported that the 8-h occupational noise levels ranged from 66-111 dB(A) with the median level at 84.5 dB(A). In addition, it is reported that noise dosimeters have been used at Air Force bases across the country in an experimental effort to determine how well their use would fit in with existing Air Force hearing conservation programs. Finally, some of the merits of noise dosimeters, as well as some of the problems involved in setting up ongoing noise monitoring programs, are discussed. M.E.P.

A80-11637 Effects of pseudoephedrine and triprolidine on visual performance. S. M. Luria, H. M. Paulson, A. P. Ryan, and C. L. Schlichting (U.S. Naval Material Command, Naval Submarine Medical Research Laboratory, Groton, Conn.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1158-1160. 20 refs.

The effects of q.i.d. administration of 60 mg pseudoephedrine (Sudafed) tablets or pseudoephedrine-triprolidine (Actifed) tablets after 5 d of medication were measured on tests of night vision, color perception, stereopsis, and reaction time. Neither drug appeared to impair performance. (Author)

A80-11638 Survey on eye comfort in aircraft. II - Use of ophthalmic solutions. W. G. Eng (Eye Clinic, Alameda, Calif.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1166-1169. 15 refs. Research supported by Bausch and Lomb, Inc. and Association of Flight Attendants.

Flight attendants frequently use ophthalmic solutions (eyedrops) to relieve their eye discomfort while working in the aircraft. The purpose of this paper is to present some insight concerning the use of ophthalmic solutions by flight attendants. A questionnaire was developed in conjunction with the Air Safety Department of the Association of Flight Attendants. The common eye problem characterized by conjunctival redness and eye irritation occurred with 95% of the 774 respondents. Furthermore, 60% of these respondents indicated that they have used eyedrops while in flight. The majority of the respondents were using an ocular decongestant; however, it is suggested that the use of artificial tears would be more effective in relieving eye discomfort in the aircraft. (Author)

A80-11639 Sickle cell trait and the aviator. R. B. Rayman (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1170-1172. 8 refs.

The paper discusses the possibility that space travel enhances the sickle cell trait (SCT) found in humans. Attention is given to the risk of SCT in air travel and it is found that the danger becomes more perceptible when cabin altitudes exceed 21,000 ft. The possibility of SCT risk for USAF personnel is examined as well as the potential threat of cabin or cockpit decompression. It is determined that SCT occurs in a significant percentage of blacks and in individuals of Mediterranean descent. Although there is no apparent danger, since most people travel at altitudes below 21,000 ft, it is suggested that the problems that could result in the USAF be assessed of the risks involved. C.F.W.

A80-11640 Student pilots referred to the neuropsychiatry branch, USAFSAM 1968-78 - Implications for selection. R. A. Levy, D. B. Tolson, and E. H. Carlson (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 50, Nov. 1979, p. 1173-1175.

The case records of 76 student aviators referred to the Neuropsychiatry Branch of the USAF School of Aerospace Medicine during the period 1968-78 are reviewed. Demographic and diagnostic data are provided including source of recruitment, age, marital status, aircraft flown, flying hours, and diagnostic categories. Psychophysiological categories are particularly scrutinized and cameo case histories provided. Implications for pilot selection are discussed. (Author)

A80-11641 **Lower body negative pressure box for +Gz simulation in the upright seated position.** M. T. Lategola and C. C. Trent (FAA, Civil Aeromedical Institute, Oklahoma City, Okla.). *Aviation, Space, and Environmental Medicine*, vol. 50, Nov. 1979, p. 1182-1184. 6 refs.

A description and the operational characteristics of the lower body negative pressure (LBNP) box for plus Gz simulation in the upright seated position are presented. In this version, a negative pressure of minus 40 torr is considered the equivalent of a 2(plus Gz) stress, and the box has withstood a minus 120 torr test pressure. The LBNP box, the hatch cover, and its adjustable waist-surrounding iris system are described, noting that the pedal ergometry within the box is easily accomplished. The box was engineered to accomodate human height from 160 to 195 cm, and locating it within an altitude chamber allows application of LBNP at any level of chamber altitude. A.T.

A80-11876 # **Cortical mechanisms of integrative brain activity (Kortikal'nye mekhanizmy integrativnoi deiatel'nosti mozga).** A. S. Batuev. Leningrad, Izdatel'stvo Nauka, 1978. 53 p. 139 refs. In Russian.

The convergence and integration of somatic, visceral and external signals in elements of the cerebral cortex is examined in the case of the sensorimotor cortex. The internal organization of the various structural and functional neuronal modules in the sensorimotor cortex is discussed. Intersensory integration and the formation of cortifugal impulses are considered, with attention given to the principle of the dominant state of the central nervous system, mechanisms of sensory adaptation and sensitization, conditioned reflexes and the fixation of new behavior patterns. A.L.W.

A80-12223 **Was the pre-biotic atmosphere of the earth heavily reducing.** M. H. Hart (Trinity University, San Antonio, Tex.). *Origins of Life*, vol. 9, Sept. 1979, p. 261-266. 24 refs.

The oxidation state of the prebiotic earth atmosphere is estimated on the basis of oxygen production rates. It is shown that the approximately 32 x 10 to the 21st g of oxygen corresponding to the approximately 12 x 10 to the 21st g of carbon in sediments produced by green-plant photosynthesis can be accounted for mainly by the escape of 1.2 x 10 to the 21st g as free atmospheric oxygen, the incorporation of 8.0 x 10 to the 21st g in sedimentary rocks, and the oxidation of gases present in the prebiotic atmosphere and subsequently released volcanic gases by 23 x 10 to the 21st g of oxygen. Such a heavily reducing prebiotic atmosphere is shown to be compatible with juvenile volcanic emissions, and it is noted that only if the carbon sediment abundance has been greatly overestimated can the primordial earth atmosphere have been nonreducing. A.L.W.

A80-12227 **Antiquity and evolutionary status of bacterial sulfate reduction - Sulfur isotope evidence.** M. Schidlowski (Max-Planck-Institut fur Chemie, Mainz, West Germany). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, University of Maryland, College Park, Md., Oct. 18-20, 1978.) Origins of Life*, vol. 9, Sept. 1979, p. 299-311. 48 refs. Research supported by the Deutsche Forschungsgemeinschaft.

The Precambrian sedimentary sulfur isotope record is surveyed in order to narrow in time the possible rise of sulfate-respiring organisms during the Early Precambrian. The sulfur isotope abundances of the Archean age are taken as a baseline, exhibiting delta S-34 values close to zero per mil. Isotopic evidence of dissimilatory sulfate reduction is first observed in the upper Archean of the Aldan Shield, Siberia of 3.0 billion years ago and in the Michipicoten and Woman River banded iron formations of Canada of 2.75 billion years ago, narrowing the possible time of appearance of sulfate respirers to the interval 2.8 to 3.1 billion years ago. Sedimentary sulfur isotope data suggest that sulfate respiration followed sulfur photosynthesis, both of which significantly antedated oxygen respiration. Archean sulfate evaporites are thus attributed to the activity of photosynthetic sulfur bacteria, and not to the effects of oxidation weathering. A.L.W.

A80-12228 **Archean photoautotrophy - Some alternatives and limits.** A. H. Knoll (Oberlin College, Oberlin, Ohio). *(College Park Colloquium on Chemical Evolution: Limits of Life, 4th, University of Maryland, College Park, Md., Oct. 18-20, 1978.) Origins of Life*, vol. 9, Sept. 1979, p. 313-327. 85 refs. Research supported by Oberlin College.

Alternative hypotheses as to the nature of the photoautotrophs of the Archean era are discussed. Limits on the composition of the Early Proterozoic atmosphere provided by the change in composition of the continental sedimentary rocks are considered, and it is concluded that the Archean atmosphere contained small concentrations of oxygen, which rose significantly during the Early Proterozoic. Explanations of the rise of atmospheric oxygen include the hypotheses that (1) the transition reflects the appearance of the first blue-green algae; (2) primitive cyanobacteria flourished prior to the transition but backed the biochemical mechanisms to deal with the O2 produced; and (3) cyanobacterial Archean O2 production was consumed by volcanic emissions. An additional hypothesis that physiologically modern cyanobacteria of the Archean had low oxygen productivity, which rose sharply in the Early Proterozoic era to oxygenate the atmosphere, due to the replacement of Archean environments characterized by high rates of clastic and pyroclastic influx by widespread, stable, shallow marine platforms where productivity is high, is proposed. A.L.W.

A80-12229 * **Oxygen as a factor in eukaryote evolution - Some effects of low levels of oxygen on Saccharomyces cerevisiae.** L. Jahnke and H. P. Klein (NASA, Ames Research Center, Exobiology Research Div., Moffett Field, Calif.). *Origins of Life*, vol. 9, Sept. 1979, p. 329-334. 23 refs.

A comparative study of the effects of varying levels of oxygen on some of the metabolic functions of the primitive eukaryote, Saccharomyces cerevisiae, has shown that these cells are responsive to very low levels of oxygen: the level of palmitoyl-Co A desaturase was greatly enhanced by only 0.03 vol % oxygen. Similarly, an acetyl-CoA synthetase associated predominantly with anaerobic growth was stimulated by as little as 0.1% oxygen, while an isoenzyme correlated with aerobic growth was maximally active at much higher oxygen levels (greater than 1%). Closely following this latter pattern were three mitochondrial enzymes that attained maximal activity only under atmospheric levels of oxygen. (Author)

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.). *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

A80-12270 **Biochemical chromophores and the interstellar extinction at ultraviolet wavelengths.** F. Hoyle and C. Wickramasinghe (University College, Cardiff, Wales). *Astrophysics and Space Science*, vol. 65, no. 1, Sept. 1979, p. 241-244. 5 refs.

An attempt is made to identify the UV interstellar absorption feature at 2200 A with molecules in biological systems. A smoothed mean interstellar extinction curve is compared with a histogram and a computed average absorption curve for naturally occurring biological chromophores in 186 molecules. The existence of a broad peak in the histogram spanning the wavelength range from 2150 to 2400 A with a maximum close to 2200 A is taken as providing a prima facie case for identifying the 2200-A interstellar feature with molecules in biological systems. It is suggested that chromophores in biomolecules dominate the interstellar absorption at wavelengths of 1900 to 2800 A, that less pronounced interstellar features at reciprocal wavelengths of 5.8 and 6.3 per micron are most likely due to biological chromophores involving single-bond electrons in saturated hydrocarbons, and that the interstellar extinction curve in the range from 0 to 9 per micron is readily explained on the basis of scattering by bacteria and viruses in interstellar space, together with chromophoric absorption. F.G.M.

A80-13018 * **The radioracemization of isovaline - Cosmochemical implications.** W. A. Bonner, N. E. Blair, R. M. Lemmon, J. J. Flores, and G. E. Pollock (NASA, Ames Research Center, Moffett Field; Stanford University, Stanford; California, University, Lawrence Berkeley Laboratory, Berkeley, Calif.). *Geochimica et Cosmochimica Acta*, vol. 43, Nov. 1979, p. 1841-1846. 30 refs. Research supported by the U.S. Department of Energy and NASA.

The optically pure D- and L-enantiomers of isovaline, which cannot be racemized by ordinary chemical mechanisms involving alpha-hydrogen removal and which has been isolated in apparently racemic form from the Murchison meteorite, have been subjected to partial radiolysis by the ionizing radiation from a 3000-Ci Co-60 gamma-ray source. Both in the anhydrous and hydrated solid states and as solid sodium or hydrochloride salts each enantiomer suffered significant radioracemization of the undestroyed residue during its partial radiolysis. The sodium salt of isovaline in 0.1-M aqueous solution suffered extensive radiolysis with relatively small radiation doses, but showed no detectable radioracemization. The significance of these observations with respect to the primordial enantiomeric composition of the isovaline (and other amino acids) indigenous to meteorites is discussed. (Author)

A80-13075 * **Parabolic flight - Loss of sense of orientation.** J. R. Lackner (Brandeis University, Waltham, Mass.) and A. Graybiel (U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, Fla.). *Science*, vol. 206, Nov. 30, 1979, p. 1105-1108. 9 refs. Contract No. NAS9-15147. NASA Order T-5904-B.

On the earth, or in level flight, a blindfolded subject being rotated at constant velocity about his recumbent long body axis experiences illusory orbital motion of his body in the opposite direction. By contrast, during comparable rotation in the free-fall phase of parabolic flight, no body motion is perceived and all sense of external orientation may be lost; when touch and pressure stimulation is applied to the body surface, a sense of orientation is reestablished immediately. The increased gravitoinertial force period of a parabola produces an exaggeration of the orbital motion experienced in level flight. These observations reveal an important influence of touch, pressure, and kinesthetic information on spatial orientation and provide a basis for understanding many of the postural illusions reported by astronauts in space flight. SOUTH AMERICAN RIVER MORPHOLOGY AND HYDROLOGY
R. K. Holz, V. R. Baker, S. M. Sutton, Jr., and M. M. Penteado-Orellana (Fundacao Univ. de Brasilia) *In* NASA. Johnson Space Center Apollo-Soyuz Test Project, Vol. 2 1979 p 545-594 refs
Avail: NTIS HC A99/MF A01

A guide to the hydrologic properties of streams in the Amazon and Paraguay Basins is presented. Photographs are presented from the Apollo Soyuz Test Project of the Amazon Basin. Stream regimes, including analyses of meander wavelengths, flood plain development, and basin morphology are discussed. Basin size, drainage network density, flood plain width, vegetation types and density, climatic factors, and terrain variability are assessed. Adjustments of changes in river morphology caused by altered water and sediment discharges and by quaternary climatic changes are discussed. A.W.H.

Physiological, biochemical and morphological studies made on the Cosmos-782 biosatellite are presented. Rats, which were exposed on the biosatellite for 19.5 days, were examined immediately after completion of the flight and also during the 25 day period of readaptation to earth's conditions. The effect of factors of space flight, primarily weightlessness, on the organism was investigated for all systems of the body. R.E.S.

AN EXAMINATION OF STATISTICAL IMPACT ACCELERATION INJURY PREDICTION MODELS BASED ON TORQUE AND FORCE VARIABLES
Dennis E. Smith and John J. Peterson Jul. 1979 23 p refs
(Contract N00014-79-C-0128)
(AD-A071625; TR-112-1) Avail: NTIS HC A02/MF A01 CSCL 06/19

This technical report describes the construction of impact acceleration injury prediction models from a set of twenty eight -G sub x accelerator runs involving Rhesus monkeys with securely restrained torso and unrestrained head. Peak torque and force variables measured during these runs were used to predict injury likelihood. The relative contribution of these variables was examined with respect to the original and a modified version of the data set. Two possible prediction models were used to construct two critical envelopes, i.e., those values of the variables for which the predicted probability of injury (or fatality) is less than or equal to some specified probability. The preferred model was identified and discussed. GRA

TYPES OF AQUATIC MICROCOSMS AND THEIR RESEARCH APPLICATIONS
J. M. Giddings 1978 34 p refs Presented at the Symp. on the Savannah River Ecology Laboratory, Augusta, Ga., 8 Nov. 1978
(Contract W-7405-eng-26)
(CONF-781101-1; ESD-Publ-1254) Avail: NTIS HC A03/MF A01

Aquatic microcosm research has developed along two basic lines, the model ecosystem and the model food chain. Originally used mainly to test ecological hypotheses, microcosms are now finding applications in assessing the environmental effects of human activities, particularly chemical pollution. A critical problem today is selection of appropriate microcosm types for different research needs. Model ecosystems are used for studying community or ecosystem-level phenomena, such as diversity, stability, nutrient cycling, and energy flow, under controlled conditions. Model food chains, which are simpler, easier to analyze, but less realistic than model ecosystems, are applicable to studies of population dynamics, interspecific competition, predator-prey interactions, and trophic dynamics. In contaminant research, microcosms are more useful as predictive tools than as screening tools. DOE

CURRENT CONCEPTIONS ON THE GENESIS OF VESTIBULOVEGETATIVE DISORDERS IN WEIGHTLESSNESS
B. I Polyakov *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 1-12 refs Transl. into ENGLISH of Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 3-10

Avail: NTIS HC A07/MF A01

The hypotheses of the genesis of vestibulo-vegetative disorders in weightlessness are analyzed. Preference is given to the concept which attaches greatest importance to the changes in stereotyped interactions of analyzers responsible for space perception. It is however, emphasized that neither hypothesis can account for all the phenomena seen in crewmembers in orbital flight. It is, therefore, indicated that mechanisms of vestibulo-vegetative disorders need further study. It is believed that the most promising line of research is to study the role of endogenous factors determining individual variations of motion sickness susceptibility. J.M.S.

EFFECT OF HYPOXIA ON FLUID-ELECTROLYTE METABOLISM AND RENAL FUNCTION IN MAN AS RELATED TO DIFFERENT DEGREES OF MOTOR ACTIVITY
A. I. Grigoryev, V. I Korolkov, G. I. Kozyreyskaya, and M. A. Dotsenko *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 13-18 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 10-14

Avail: NTIS HC A07/MF A01

It was demonstrated that a prolonged (24 days) bed rest at altitudes of 2200 m and 3200 m as well as at sea level was accompanied by an increased renal excretion of fluids and osmotically active substances, including electrolytes. Exercises done during bed rest induced a smaller increase of the renal excretion of sodium and potassium. However, as bed rest continued the differences between the groups of test subjects disappeared. The levels of hypoxia and exercises used in the study proved inefficient to prevent changes in the fluid-electrolyte metabolism occurring during bed rest. Author

AGE-RELATED DISTINCTIONS OF CHANGES IN PSYCHOPHYSIOLOGICAL FUNCTIONS OF PILOTS IN THE CIVIL AVIATION UNDER THE INFLUENCE OF VIBRATION AND NOISE
Yu. N. Kamenskiy and Ye. A. Sokolova *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 30-34 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 21-24

Avail: NTIS HC A07/MF A01

The effect of vibration and noise of helicopters on the psychophysiological functions of their crewmembers was studied in relation to their age. The changes were mostly pronounced in pilots younger than 20-25 and older than 45 years. The peculiar changes in the psychophysiological functions can be associated with the age-related features of adaptation to vibration and noise effects and with the different level of professional training. DIETARY SUPPLEMENTS USED TO PREVENT SOME CHANGES IN THE HUMAN BODY IN THE PRESENCE OF NERVOUS AND EMOTIONAL STRESS
V. P. Bychkov and M. V. Markaryan *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 35-39 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 25-28

Avail: NTIS HC A07/MF A01

Stress situations similar to those encountered in space flight were simulated. These included: (1) ascent to an altitude of 8000 m in a pressure chamber; (2) anticipation of gravitational acceleration on a centrifuge; and (3) performance mental activity under the conditions of time defficiency in 'success' and 'failure' situations. Changes in protein, carbohydrate, and vitamin metabolism, heart rate, adrenal function, and peripheral blood were noted. Nutrient ingredients (vitamins, glucose, minerals, phosphatid concentrate) added to the diet before and during stressful exposures were shown to correct the parameters studied. J.M.S.

EFFECT OF SPACE FLIGHT CONDITIONS ON DEOXYRIBONUCLEOPROTEIN AND NUCLEIC ACID CONTENT OF RAT TISSUES
E. Misurova, R. A. Tigranyan, K. Kropaceva, and M. Praslicka *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 29 Oct. 1979 (JPRS-74470) p 45-49 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm Med. (Moscow), vol. 13, no. 5, 1979 p 32-35

Avail: NTIS HC A07/MF A01

The spleen of rats flown for 19.5 days aboard the biosatellite Cosmos-782 showed a significant increase of polydeoxyribonucleotides and a decrease of DNP and DNA. The spleen of synchronous rats did not exhibit any differences. This suggests that the increase of polydeoxyribonucleotides in flight rats immediately post-recovery was a result of the so-called gravity stress. The liver and white blood cells did not display any significant changes in DNP or nucleic acids. The changes in the content of nucleic acids in the thymus and bone narrow were insignificant. Author

(Moscow), vol. 13, no. 5, 1979 p 35-41

Avail: NTIS HC A07/MF A01

The influence of hypokinesia on the nature of development of hyperthermia and dynamics of functional state of the animal thermoregulatory system is described. It was shown that following acute thermal exposures, the survival rate and life-time of hypodynamic rats increased. The changes were more expressed after 15-day than after 30-day hypokinesia. By the 7th recovery day thermal stability of rats approached the initial level. M.M.M.

EFFECT OF HYPOKINESIA ON HIGHER NERVOUS ACTIVITY OF ALBINO RATS

M. A. Kuznetsova and Ye. S. Meyzerov *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 58-62 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 41-44

Avail: NTIS HC A07/MF A01

The effect of a 22-day hypokinesia study on the labyrinthine behavior of white rats was investigated. The test animals showed certain behavioral changes which developed throughout 22 days. However, significant changes occurred only during the first 6-7 days. Later, the changes diminished but retained their trend. The behavioral changes can be associated with inhibition of the nervous processes of higher cerebral compartments responsible for the higher nervous activity. M.M.M.

THE COMBINED EFFECT OF CARBON MONOXIDE AND HYPOKINESIA

B. I. Abidin, V. V. Kustov, V. I. Belkin, and A. N. Kondratyev *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 63-68 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 44-48

Avail: NTIS HC A07/MF A01

The 30-day experiment, in which white male rats were exposed to a combined effect of hypokinesia and carbon monoxide at a concentration of 0.05 + or - 0.002 mg/l, showed that carbon monoxide did not influence significantly hypokinesia-induced changes. It is concluded that maximally allowable concentrations of carbon monoxide need not be reduced for 30-day hypokinesia exposures. Author

LEVELS AND PROPORTION OF RNA AND PROTEINS IN THE SYSTEM OF THE NEURON: VESTIBULAR NUCLEAR NEUROGLIA AND CEREBELLUM DURING HYPOKINESIA

L. M. Mamalyga *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 69-75 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 49-53

Avail: NTIS HC A07/MF A01

The changes in the cell structures of the vestibular Bechterew's and Deiter's nuclei and in the cerebellal cortex were studied in rats in the presence of reduced muscular activity. The RNA and protein content were used to assess the direction and severity of changes in the functional activity of these brain elements. It was concluded that the restriction of motor activity has a substantial effect on RNA and protein content of the neuroglia system. The nature of changes in these substances was related both to the force of the extreme factor and morphofunctional organization of the brain, and the biochemical structure as well. M.M.M.

SOME HEMODYNAMIC PARAMETERS DURING RESPIRATION OF OXYGEN UNDER EXCESSIVE PRESSURE

K. I. Murakhovskiy and L. I. Letkova *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 76-81 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 53-57

Avail: NTIS HC A07/MF A01

The experimental findings on the pattern and value of circulation changes in ten test subjects exposed to oxygen breathing at positive pressure of 20 mm Hg are cited. The major parameters of central circulation were registered by the method of radioactive label (I131) dilution. During the exposure, the test subjects showed an average 27% decrease in the cardiac output as compared with the control level. The test subjects who were pretrained to the exposure displayed a smaller reduction of cardiac output. The circulation changes found under the experimental conditions were mainly induced by peripheral changes rather than by the cardiac function. It is concluded that the reduction of cardiac output is associated with a decrease of the venous return to the heart caused by the diminished circulating blood volume and by the increased total peripheral resistance. M.M.M.

BICHROMATE OXIDABILITY AS A CRITERION OF QUANTITATIVE LEVELS OF ORGANIC IMPURITIES IN RECLAIMED WATER

V. A. Kryuchkov and N. S. Mareyeva *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 82-87 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 57-61

Avail: NTIS HC A07/MF A01

Experiments were carried out to study permanganate and bichromate oxidation of chemicals that may contaminate reclaimed water, initial and intermediate products of reclamation. Permanganate oxidability can be used as a qualitative indicator of water contamination with readily oxidizable admixtures only. Bichromate oxidability can be employed as a quantitative indicator of the total content of organic admixtures, provided that oxidation is carried out in a certain way. For the water reclaimed from the atmospheric condensate the following correlation between bichromate oxidability and the concentration of admixtures has been established: 1 mg O2 consumed corresponds approximately to 0.66 mg of organic admixtures in water. ULTRASTRUCTURAL CHANGES IN CANINE HEPATOCYTES DURING CONTINUOUS CHRONIC EXPOSURE TO LOW DOSES OF GAMMA RADIATION

L. A. Bespalova, V. V. Shikhodyrov, and V. S. Romanov *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 93-99 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 65-69

Avail: NTIS HC A07/MF A01

Electron microscopy of the liver of dogs exposed to chronic 6-year gamma-irradiation from the Co60 source demonstrated early changes in the hepatocyte structure at a relatively low dosage of 63 rad for 3 years. A comparative study of the submicroscopic reaction of hepatocytes of 3 groups of test dogs showed equally pronounced changes in the endoplasmatic reticulum: vacuolar transformation balloon dystrophy. The heterogeneity of ultrastructural changes of different hepatocytes was probably associated with a simultaneous development of processes of injury, reparation and adaptation of intracellular structures during the long-term gamma-irradiation exposure.

Parallel development of these processes assured reparative biosynthesis to maintain the normal hepatic function. Author

RUSH NUTS (CYPERUS ESCULENTUS) AS A SOURCE OF VEGETABLE OIL IN A CLOSED LIFE SUPPORT SYSTEM

M. P. Shilenko, G. S. Kalacheva, G. M. Lisovskiy, and I. N. Trubachev *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 100-105 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 70-74

Avail: NTIS HC A07/MF A01

The cultivation schemes, productivity, total biochemical, lipid in particular, composition of nodules of chufa (Cyperus esculentus) were studied, using a phytotron. Upon continuous illumination, chufa yielded a high total productivity and a satisfactory coefficient of economic effectiveness (not less than 50%). Chufa nodules have an optimal ratio of proteins, carbohydrates, and fats containing essential fatty acids. To meet man's requirements for vegetable oils and essential fatty acids, it is necessary to produce daily 150-200 g dry chufa nodules which are quite acceptable as a dietary ingredient. Author

USE OF SHORT-ARM CENTRIFUGE TO PREVENT DECONDITIONING WHEN IMMERSED IN WATER (ACCORDING TO H-REFLEX)

B. I. Zborovskaya *In its* USSR Report: Space Biol. and Aerospace Med., Vol. 13, No. 5 (JPRS-74470) 29 Oct. 1979 p 114-116 refs Transl. into ENGLISH from Kosm. Biol. i Aviakosm. Med. (Moscow), vol. 13, no. 5, 1979 p 78-79

Avail: NTIS HC A07/MF A01

The possibility of using periodic rotation on a short-arm centrifuge (SAC) as a means of preventing the adverse effects of immersion was assessed. Healthy volunteer subjects were immersed in water for 3 days. The rate of build-up of accelerations constituted 0.2 units/s, time of exposure to accelerations of +3Gz constant in magnitude and direction constituted 5 min. Each subject was submitted to +3Gz after pure immersion and immersion combined with periodic rotation on a SAC, where accelerations of +0.8 Gz, +1.2 Gz or 1.6 Gz were generated for 60 min twice a day (first series) and for 40 min 3 times a day (second series). The subjects were positioned on the SAC in such a manner as to have the axis of rotation traverse the region of the bridge of the nose. Under these conditions, neuromuscular functions were tested by the methods of the H (Hoffmann) reflex and electromyography. Results are discussed. J.M.S.

USE OF THE PUPIL TO STUDY THE SCOTOPIC AND CHROMATIC MECHANISMS OF VISION IN HUMANS Ph.D. Thesis
Vasant Durgadas Saini 1979 361 p
Avail: Univ. Microfilms Order No. 7922962

Automated instrumentation was developed to conduct pupillometric experiments rapidly, accurately, and repeatably. Key features of the pupil light reflex were then studied, and its useful attributes were identified. A suitable procedure for measuring pupillary threshold was developed. It was verified that the pupil response to simple foveal flashes against a dark background was scotopic, but that other experiments indicated cone contribution to pupillary miosis. The unidirectional rate sensitivity of the pupil to retinal illumination was found to be a useful property of the pupil control system, and made it a convenient tool for studying the relationships between the scotopic and different chromatic channels of vision. This property was exploited, and a suitable model incorporating it was developed and used. Dissert. Abstr.

THE EXTENDED KALMAN FILTER AS PULMONARY BLOOD FLOW ESTIMATOR Ph.D. Thesis
Oleg Brovko 1979 276 p
Avail: Univ. Microfilms Order No. 7921375

The anesthetic uptake model was examined and developed to include dead space and shunt in the lung. The number of body compartments was examined and a representative model for anesthetic uptake was chosen which is computationally manageable for the on-line algorithm. Ljung's formulation of the extended Kalman filter was compared with the optimal nonlinear filter and modified to estimate time-varying lung perfusion. The results were then generalized to a large class of nonlinear filtering problems which are of theoretical and practical interest. The algorithm accuracy, ability to follow lung perfusion changes, stability and robustness were examined and the technique was shown to be as accurate as thermal dilution in the clinical environment. These experiments establish the potential value of the on-line algorithm as an estimator of pulmonary blood flow during both steady and nonsteady states. Dissert. Abstr.

N80-10780 Wayne State Univ., Detroit, Mich.
A MODEL FOR AUDITORY EVOKED POTENTIALS Ph.D. Thesis
Peter Michael Nefcy 1979 282 p
Avail: Univ. Microfilms Order No. 7921705

Volume-conducted potentials from brain stem auditory structures were recorded from the scalp. These auditory evoked potentials (AEP) are due to neuronal activity from subcortical structures located in the brain stem, as well as the primary cortical areas. A mathematical model utilizing moving and fixed dipoles in a homogeneous volume-conducting medium was developed to simulate the response of the auditory system to acoustic clicks of intensity 60 dBSL during the first fifteen msec after stimulus delivery. The model demonstrates that the waves of the AEP can be generated from multiple sites in the brain stem. Various neurological disorders can be modeled with changes in the pathways, dipole magnitudes, and tract delays which reflect mechanisms of the disease processes. Dissert. Abstr.

N80-10781 Pennsylvania State Univ., University Park.
PLASMA VOLUME CHANGES IN FIT MEN AND WOMEN DURING A HUMID HEAT STRESS BEFORE AND AFTER AN ACCLIMATION Ph.D. Thesis
Janet Torma-Krajewski 1979 158 p
Avail: Univ. Microfilms Order No. 7922358

Plasma volume responses of fit men and women demonstrating similar maximum aerobic capacities were measured during a humid heat stress while walking on a treadmill at 30% maximal oxygen consumption. Prior to the acclimation no statistical differences in the core temperature, heart rate and blood pressure responses of the three groups were found. However, as judged by these responses, the observed trends indicated less strain in the pre-ovulation females when compared to the post-ovulation females and males. The females were better acclimated than the males as indicated by the rectal temperature responses. No statistical differences were observed in heart rate or blood pressure responses among the three groups. Dissert. Abstr.

THERMAL CONDUCTION EFFECTS IN HUMAN SKIN. PHASE 2: EXPERIMENTAL VALIDATION AND APPLICATION OF DATA IN SELECTION OF MATERIALS
A. M. Stoll, M. A. Chianta, and J. R. Piergallini 15 Jan. 1979 17 p refs
(Contract CPSC-C-77-0091; WF51523000)
(AD-A068480) Avail: NTIS HC A02/MF A01 CSCL 06/14

Experimental production of threshold blisters at material temperatures, and contact times predicted from measurements of pain thresholds validated the concept underlying this study, that is, that the relationship between pain and blister thresholds established earlier for radiant and for convective heating could be extended into the region appropriate to conductive heating to provide a simple factor by which to convert pain threshold contact times to threshold blister times. From the successful demonstration of this thesis, it is concluded that extrapolation of converted pain threshold temperature-time values determined empirically constitutes a reliable means of predicting maximum permissible temperature of materials for safe contact with bare skin. The information so derived, pertinent to areas of minimal epidermal thickness, is presented to chart form suitable for use in preselection of thermally safe construction and manufacturing materials. PULMONARY ADAPTATION TO HIGH ALTITUDE Annual Report, 1 Feb. - 31 Dec. 1978
Jerome A. Dempsey 22 Dec. 1978 20 p refs
(Contract DAMD17-77-C-7006; DA Proj. 3E1-61102-BS-08)
(AD-A068317) Avail: NTIS HC A02/MF A01 CSCL 06/19

This project is aimed at two closely related questions concerning man's adaptation to high altitude hypoxia: (1) What mechanisms regulate the ionic composition of brain intra- and extra-cellular fluid in long-term hypoxia, and (2) What role do these regulatory factors play in mediating ventilatory acclimatization to hypoxia. In the second year of our contract, we have accomplished the following: (a) found that CSF (H-) changed as a function of ventilation during normoxia deacclimatization from chronic hypoxia; (b) established the rat as an animal model for human ventilatory acclimatization to chronic hypoxia, and observed the relative insensitivity of ventilation to alkaline brain perfusion in chronic hypoxia; (c) established the near-perfect regulation of brain pHi in short-term hypoxia and/or hypocapnia and determined the contribution of changes in brain metabolism of this regulation; (d) established the necessary biochemical and physiologic methods and then showed a close link between CNS serotonin metabolism and the control of air-breathing eupnea in the awake rat; and (e) showed the difference in and importance of ventilatory adaptation in other physiologic states--sleep and exercise. EFFECT OF A RAPID 4 PERCENT CARBOXYHEMOGLOBIN SATURATION INCREASE ON MAXIMAL TREADMILL EXERCISE
R. D. Stewart, P. E. Newton, J. Kaufman, H. V. Forster, J. P. Klein, M. H. Keelen, Jr., D. J. Stewart, A. Wu, and C. L. Hake 1978 46 p refs
(PB-296627/3; MCOW/ENVM/CO-78/2; CRC-APRAC-CAPM-22-75) Avail: NTIS HC A03/MF A01 CSCL 06T

The effect and adaptation to this hypoxic stress over four hours was measured in six physically fit fire fighters. The subjects were randomly exposed and exercised to exhaustion in a double blind experiment to either carbon monoxide (CO) or uncontaminated air twice a week for three weeks. On exposure days the subjects breathed 20,000 ppm CO for 45 seconds, followed by 30 ppm CO for four hours. The rapid increase in COHb resulted in a decrease (p less than .05) in the mean exhaustion times obtained immediately after the CO bolus (745.2 to 736.3 sec). However, this small exercise decrement was not consistently observed, and in 16 of the 44 measurements the trained subjects performed better following CO exposure. GRA

THE DEVELOPMENT OF THE ATC SELECTION BATTERY: A NEW PROCEDURE TO MAKE MAXIMUM USE OF AVAILABLE INFORMATION WHEN CORRECTING CORRELATIONS FOR RESTRICTION IN RANGE DUE TO SELECTION
James O. Boone and Mary A. Lewis Sep. 1978 46 p refs
(AD-A066132; FAA-AM-78-36) Avail: NTIS HC A03/MF A01 CSCL 05/9

A five test selection battery is currently given to select the air traffic controllers. Data was collected on two new tests being considered for incorporation into the battery. To determine the utility of the old and new tests, it is necessary to correlate the tests with a criterion of job success. However, since criterion information is available only on persons already selected for air traffic control work, the correlation is restricted to this upper range of persons, and is, thereby, spuriously low for prediction purposes. To properly evaluate the utility of the tests, the correlation must be corrected for this restriction in range. A new procedure that was developed to more accurately correct correlations for restriction in range is described. The new procedure was compared with Gulliksen and Thorndike's procedures by the Monte Carlo method and was shown to be more accurate. R.E.S.

RESEARCH ON THE PSYCHOPHYSIOLOGICAL BASIS OF HUMAN VIGILANCE Final Report, 1968 - 1978
James F. O'Hanlon, Jr. Apr. 1979 17 p refs
(Contract N00014-68-C-0296; NR Proj. 201-052)
(AD-A068562; TR-787-F) Avail: NTIS HC A02/MF A01 CSCL 05/10

The research products of a program of studies directed at identifying the psychophysiological basis of human vigilance are briefly summarized. Much of the work focused on identifying the relationship between the biogenic catecholamines, adrenaline (A) and noradrenaline (NA), and human vigilance. A new fluorometric assay for subnanogram concentrations of (A) and (NA) was developed. Several studies were performed showing substantial correlations between vigilance performance and circulating concentrations of (A). It was shown that vigilance could be increased through pulsatile infusions of (A). Vigilance was shown to be adversely affected by typical urban concentrations of carbon monoxide (CO) and by hypoxia experienced at high altitudes. It was also shown that vigilance decrements occur not only with typical laboratory tasks (used early in the program) but also with realistic radar monitoring tasks. Target detection performance, using a typical radar PPI, was shown to deteriorate over time as excretion rates of (A) decreased. Concurrent monitoring of the EEG showed that the performance decrement was also accompanied by a decreased percentage of Beta and increased percentage of Alpha and Theta. GRA

The major goal of the present study was to demonstrate an aptitude-strategy interaction in linear syllogistic reasoning. Specifically, it was hypothesized that the efficiency of each of four alternative strategies for solving linear syllogisms--problems such as 'John is taller than Bill; Bill is taller than Pete' who is tallest?--would depend upon subjects' patterns of verbal and spatial abilities. This hypothesis was confirmed. The research also had three subsidiary goals. The first was to determine whether it is possible to train subjects to use various classes of strategies for solving linear syllogisms. It was found that such training is possible. The second goal was to determine whether certain strategies for solving linear syllogisms might be more efficient on the average than others. It was found that one strategy, used spontaneously by only a small minority of subjects but rather easily trainable, is more efficient than alternative strategies that subjects seem to use. The third goal was to provide a series of converging operations for testing the validity of one particular account of linear-syllogistic reasoning--a spatial-linguistic mixture model--for subjects receiving no explicit instruction in the solution of linear syllogisms. The validity of this model for the untrained subjects was upheld. It was concluded that componential analysis, a series of concepetual and methodological techniques for investigating intelligent performance, can provide a useful means for studying interactions between aptitudes and experimental treatments. A STUDY OF COMPLEX LEARNING THEORY AND METHODOLOGIES

Ross A. Bott Mar. 1979 88 p
(Contract N00014-76-C-0628; ARPA Order 2284; NR Proj. 154-387)
(AD-A068323; REPT-7901) Avail: NTIS HC A05/MF A01 CSCL 05/10

This paper presents an analysis and model of the cognitive processes underlying complex learning situations. A theory is proposed that attempts to specify particular internal knowledge structures generated and modified during instruction, and to use them to explain specific difficulties that the learner experiences and also the overall progress being made. The theory states that (1) the underlying process reflects largely the prior knowledge structures of the student interacting with the information implied by the instruction; (2) the learning mechanisms involved are mostly simple and automatic; (3) the key information within the knowledge structures which allows complex learning to occur is the similarity between higher-order structures. This theory was applied to novices learning to use a computer text editor by reading a basic instruction manual and completing some exercises. After each sentence of instruction, they were asked to describe their current understanding, any difficulties they were aware of, and their expectations about what would follow. Their protocols were analyzed for evidence of underlying cognitive processes. These learning processes and the associated knowledge structures on which they operate were then modeled in terms of the theory at several levels of detail. Several issues of knowledge representation related to the model are discussed and possible solutions proposed. GRA

REMOTE OPERATOR PERFORMANCE COMPARING MONO AND STEREO TV DISPLAYS: THE EFFECTS OF VISIBILITY, LEARNING AND TASK FACTORS Final Report

D. C. Smith, R. E. Cole, J. O. Merritt, and R. L. Pepper Feb. 1979 46 p refs
(RR04207)
(AD-A068201; NOSC/TR-380) Avail: NTIS HC A03/MF A01 CSCL 05/10

An analysis of visual perception related to the underwater environment is presented, followed by a discussion of 3-dimensional space perception, and the absolute and relative cues employed by the operator during task performance. Using a category 1 task, experiment 1 employed highly practiced subjects to reduce the effects of learning. Mono and stereo TV performance was measured under three levels of visibility degradation (simulated by contrast reduction). As predicted, stereo was superior to mono under all conditions tested. Performance using both mono and stereo displays were both affected by degraded visibility. Experiment 2 was conducted with naive subjects using an experimental design which enabled an assessment of the degree of learning under operator testing conditions. We hypothesized that the category 1 task would show significantly less advantage for stereo, but that the effects of degraded visibility would continue to occur. The results are consistent with our interpretation. In experiment 3, the more visually complex category 2 task was employed. The design of the experiment was similar to experiment 2 so that evidence for learning could be assessed under these different conditions. Predictions concerning the degree of performance advantage for stereo vs mono displays were supported. This advantage was observed to increase with decreasing visibility, a finding which is consistent with our earlier predictions. GRA

EVOKED CORTICAL POTENTIALS AND INFORMATION PROCESSING Annual Report, 1 Jan. 1978 - 30 Jun. 1979

John L. Andreassi, Joseph A. Gallichio, and Nancy E. Young 30 Jun. 1979 104 p refs
(Contract N00014-77-C-0114)
(AD-A070789; AR-16) Avail: NTIS HC A05/MF A01 CSCL 05/2

In summary, the present findings show that there are perceptual differences between continuous and apparent motion and that these differences may be reflected in the latency and amplitude of the VEP. Furthermore, theoretical and cell system models were presented to account for the observed differences. These models propose that continuous motion is processed by specialized motion detecting cells which may respond to velocity as an intensity factor in motion. In apparent motion, the models suggest that cells would respond to the spatial and temporal change in position over time aspects of this type of motion and the role of velocity as an intensity factor would be diminished. Thus, it is suggested that future studies be undertaken to compare continuous and apparent motion using a wider range of velocity conditions and recording locations. Also, the direction of motion should be systematically examined for both continuous and apparent motion. GRA

A MEMORY RETRIEVAL AID FOR HYPOTHESIS GENERATION Progress Report, Aug. 1978 - Aug. 1979

Charles Gettys, Tom Mehle, Suzanne Baca, Stanley Fisher, and Carol Manning 27 Jul. 1979 37 p refs
(Contract N00014-77-C-0615; NR PROJ. 197-040)
(AD-A072657; TR-27-7-79) Avail: NTIS HC A03/MF A01 CSCL 05/10

This study investigates an aid for the hypothesis retrieval process which is based on a model for hypothesis retrieval developed by Gettys, Fisher, and Mehle (1978). A computer simulates the human hypothesis retrieval process by searching an enriched associative memory which contains the associations of a number of individuals in the form of a list of hypotheses for each datum. When the data of a decision problem become known, the appropriate lists are searched by the computer. Hypotheses that are common to most or all of the lists are suggested to the user, who assesses them for plausibility. An experiment was performed to determine the utility of the aid for both expert and non-expert users. The aid produced a substantial gain in performance for both groups of users, suggesting that further development of the aid would be worthwhile in decision situations which are repeated often enough to warrant the creation of an enhanced artificial memory. Also discussed are several techniques for implementing the aid, and determining the maximum gain in performance that the aid can produce. GRA

MODALITY EFFECTS IN SCANNING NONVERBAL INFORMATION: EVIDENCE FOR MULTIPLE MEMORY CODES Ph.D. Thesis
R. L. Hann Jun. 1979 74 p refs
(AF PROJ. 7184)
(AD-A072297; AMRL-TR-79-53) Avail: NTIS
HC A04/MF A01 CSCL 05/2

The purpose of this experiment was to study memory coding processes as a function of input sensory modality. Some investigators have proposed a single auditory/articulatory code, regardless of stimulus modality, while others have suggested that multiple sensory-specific codes are generated. Subjects in this study learned to associate 10 twelve-sided random polygons with ten complex sounds. These paired associates were then used in several versions of a Sternberg binary choice reaction time task. Results indicated that subjects were able to maintain sensory-specific memory information when it was advantageous to do so. The observed effects were best interpreted in terms of a multiple-code model, in which both a primary (same-modality) code and a weaker associate (opposite-modality) code are simultaneously generated as the to-be-remembered information is input. HUMAN VIGILANCE INVESTIGATION ANALYSIS OF THE PATTERN ARRAY TEST (FURTHER DATA ANALYSIS) Final Report
Andrew C. Have Apr. 1979 68 p refs Prepared in cooperation with Calif. Polytechnic State Univ., San Luis Obispo
(Contract W-7405-eng-48)
(UCRL-13891-3) Avail: NTIS HC A04/MF A01

A test which is designed to help solve problems of human vigilance encountered in a material safeguard system is presented. The efficiency of an operator is measured when large amounts of information are being processed from a video screen over extended periods of time. For the test, eight objects, either circles, squares, or triangles, are set in a 5 x 5 matrix which appeared on a video screen. The eight objects are shown for a specified length of time, blanked out for another specified period, and then eight objects are again shown in the same 5 x 5 matrix. The observer is tested on his ability to discern changes in patterns and/or symbols from frame to frame. It was found that changes in pattern were more easily identified than changes in symbols. DOE

HC A05/MF A01 CSCL 06K

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

(NASA-CR-160332; LSI-ER-312-4) Avail: NTIS
HC A04/MF A01 CSCL 06K

A three-person capacity preprototype vapor compression distillation subsystem for recovering potable water from wastewater aboard spacecraft was designed, assembled, and tested. The major components of the subsystem are: (1) a distillation unit which includes a compressor, centrifuge, central shaft, and outer shell; (2) a purge pump; (3) a liquids pump; (4) a post-treat cartridge; (5) a recycle/filter tank; (6) an evaporator high liquid level sensor; and (7) the product water conductivity monitor. A computer based control monitor instrumentation carries out operating mode change sequences, monitors and displays subsystem parameters, maintains intramode controls, and stores and displays fault detection information. The mechanical hardware occupies 0.467 m3, requires 171 W of electrical power, and has a dry weight of 143 kg. The subsystem recovers potable water at a rate of 1.59 kg/hr, which is equivalent to a duty cycle of approximately 30% for a crew of three. The product water has no foul taste or odor. Continued development of the subsystem is recommended for reclaiming water for human consumption as well as for flash evaporator heat rejection, urinal flushing, washing, and other on-board water requirements. DESIGN CONSIDERATIONS FOR THE MAN-MACHINE RELATIONS USER INTERFACE TO TAS Interim Technical Report, 15 Mar. - 15 Jul. 1979
15 Jul. 1979 134 p
(Contract MDA903-79-C-0261; ARPA Order 3705)
(AD-A071207) Avail: NTIS HC A07/MF A01 CSCL 09/2

This effort consists of the analysis and design of a user interface which employs several man-machine relations factors; an existing system will be employed as a testbed for these beliefs - the COINS II Terminal Access System (TAS). This new interface must not interfere with the existing TAS user interface; it must coexist with the original and both must be accessible to TAS users. In addition to the software effort, intelligent terminals (i.e., microprocessor controlled) will emulate an electronic desk environment for the user. We feel that such modifications will result in greatly increased user acceptance of TAS, while providing a good indication of how such considerations can be applied to other systems and the possible effects of such efforts. VISUAL SEARCH PERFORMANCE IN SIMULATED REMOTELY PILOTED VEHICLE UTILIZATION AS A FUNCTION OF AUXILIARY TASK LOADING ON THE OBSERVER Final Report, 25 Aug. 1975 - 3 May 1976

Richard B. Huntoon, Benjamin Schohan, and Uldi Shvern Apr. 1979 65 p refs
(Contract DAHC19-76-C-0011)
(AD-A072402; ARI-TR-357) Avail: NTIS HC A04/MF A01 CSCL 05/5

Baseline data were obtained on how well observers could extract information from a TV monitor while performing auxiliary tasks under task loading conditions that might be encountered in use of a remotely piloted vehicle (RPV) as the sensor platform. A simulation facility was used. It contained a terrain model, a TV camera transport, hybrid computing equipment, and a television display and control console. Six pilots and six nonpilots participated in the three-phase effort. Phase A required participants to detect and recognize tank-sized targets in open and cluttered backgrounds from a simulated altitude of 2,000 feet and a simulated RPV velocity of 100 knots. Phase B required participants to monitor and correct deviations in the RPV course and altitude and to respond to two visual warning indicators. Increasing the auxiliary load level decreased the probabilities and ranges of target detection and recognition. Target acquisition task demands similarly increased auxiliary task response times. Cluttered background significantly degraded target acquisition task performance, particularly when the auxiliary task was performed concurrently. GRA

THE 5-THIO-D-GLUCOSE THERMOREGULATORY EFFECTS IN MICE AT VARIOUS TEMPERATURES

Ralph P. Francesconi and Milton Mager 14 May 1979 24 p refs

(AD-A069511; USARIEM-M-12/79) Avail: NTIS HC A02/MF A01 CSCL 06/5

Adult, male mice were administered various doses of 5-thio-D-glucose (5-TG) at three environmental temperatures: 4 C, 22 C, and 35 C. Both intracerebroventricular (ICV) and intraperitoneal (IP) administration of 5-TG resulted in significant (p less than .05 to p less than .001) decreases in rectal temperature (Tre) which were usually dose-dependent. After 30 min the hypothermic effects were significantly (p less than .001, ICV, 100 microgram) exacerbated by cold exposure (4 C vs 22 C) and were likewise intensified significantly (p less than .005, 45 min, fed vs 18 h fasted) by food deprivation. These decrements in rectal temperature (Tre) were accompanied by significant (p less than .001) increases in circulating levels of glucose. The present results indicate that 5 TG may be eliciting both central *and* peripheral cellular glucopenia concomitant with circulatory hyperglycemia; thus, the resultant hypothermia may be arising from competitive inhibition of glycolysis by 5 TG intermediates as well as reduced availability of tissue glucose. GRA

EARLY DIAGNOSIS OF DECOMPRESSION SICKNESS. CHANGES IN THE BLOOD FOUND SHORTLY AFTER DECOMPRESSION. EXPERIMENTS ON RATS
M. Wijnans, P. M. Draeck, and P. vanEck Jul. 1978 29 p refs In DUTCH; ENGLISH summary
(MBL-1978-7) Avail: NTIS HC A03/MF A01

In rats subjected to compression followed by decompression hemoconcentration was observed. The effects were then related to the severity of the applied compression-decompression procedure. In nearly all cases this hemoconcentration became apparent before signs of decompression-sickness were observed. Hemoconcentration occurred even in rats without symptoms. In a relatively large number of rats a drop in platelet count was noticed soon after decompression; but usually only after the platelet count was corrected for the hemoconcentration. It was found that in rats a rise in hematocrit had the highest prognostic value for the occurrence of symptoms of decompression sickness. Recommendations are given for an investigation of the possible prognostic value of hemoconcentration in divers. Author (ESA)

DISCRETE MULTIVARIATE ANALYSIS ON RADIOBIOLOGICAL RESULTS FROM THE BIOSTACK 3 BACILLUS SUBTILIS EXPERIMENT
R. Facius, H. Buecker, and M. Schaefer 1979 6 p refs Presented at 22d COSPAR Plenary Meeting, Bangalore, India, May-Jun. 1979
Avail: NTIS HC A02/MF A01

The dependency of spore survival on HZE particle linear energy transfer (LET) and on their distance from the particles' trajectory during Biostack 3 experiments is discussed. Multivariate methods are applied as far as the stochastic point of view is concerned, it is shown that the major features of the bivariate results cannot be reduced to the heterogeneous frequency distributions of the respectively remaining physical parameters of the HZE particles. These findings bear on considerations about mechanisms, by which biological damage might be induced by high LET heavy ions. Author (ESA)

IDENTIFICATION OF CONTROLS IN NEUROMUSCULOSKELETAL CONTROL SYSTEM MODELS
H. Hatze Oct. 1978 25 p refs
(CSIR-TWISK-52) Avail: NTIS HC A02/MF A01

The commonly adopted practice of identifying the myoactuator torques in neuro-musculoskeletal control systems as the system controls is discussed. It is demonstrated that it leads to biologically unrealistic results. A systems model describing the excitation and contraction dynamics of skeletal muscle is then presented. In this model the control parameters are the actual neural controls, motor unit recruitment and stimulation frequency, and the model correctly predicts experimentally observed muscular force outputs for a wide variety of neural control inputs. A general myocybernetic performance criterion, and certain special cases pertaining to specific contractive modes are also discussed. R.E.S.

INTERSTIMULUS INTERVAL AS IT AFFECTS TEMPORARY THRESHOLD SHIFT IN SERIAL PRESENTATIONS OF LOUD TONES
Jerry V. Tobias Jun. 1979 10 p refs
(AD-A072006; FAA-AM-79-16) Avail: NTIS HC A02/MF A01 CSCL 06/16

Temporary threshold shifts were measured repeatedly during a session in order to determine effects of interstimulus interval (ISI) on the shift. The fatiguing sound was a 3 minute, 110 dB SPL, 4,000 Hz tone. Immediately following the 3 minute stimulation, Bekesy-audiometric tracings were made for 3 minutes at 5,656 Hz. Then the subject sat quietly for the ISI that was used during that session. The effect of the subject's rest time or time off was compared at two points on the recovery curve: at 30 seconds and at 2 minutes following the cessation of the fatiguing sound. For susceptible subjects tested with short-duration ISIs, each successive threshold showed a greater shift than the earlier ones for at least four tests. As ISI was increased, improvement seemed not to follow the expected linear form. At some critical value that varies from subject to subject, successive tests no longer differ from each other: each one is similar to a first trial in which no previous exposure to the high-level tone has occurred. For most subjects run under these conditions, the critical ISI value is at least 30 minutes. Author

HYPOTHERMIA INDUCED BY CHLORPROMAZINE OR L-TRYPTOPHAN EFFECTS ON TREADMILL PERFORMANCE IN THE HEAT
Ralph P. Francesconi and Milton Mager 28 Mar. 1979 21 p refs
(DA Proj. 3E1-61102-BS-08)
(AD-A069849; USARIEM-M-8/79) Avail: NTIS HC A02/MF A01 CSCL 06/19

To study the effects of preinduced hypothermia on the physiological and thermoregulatory responses to exercise in the heat, rats were intravenously administered 100 microgram of chlorpromazine (Cpz) or 200 mg/kg of L-tryptophan (L-tryp) under restraint in a cold (4 C) environment. When rectal temperatures (Tre) reached 32-33 C, the rats were removed to a hot environment (35 C) where they ran on a level treadmill (9.14 m/min) to hyperthermic exhaustion (Tr - 42.5-43 C). Both Cpz and L-tryp hypothermia was effective in increasing significantly (p less than .001) the time to hyperthermic exhaustion. However, the maximal tre and skin temperatures (Tsk) attained were unaffected by either treatment. While exercising on the treadmill increments (C/min) in Tre and Tsk were significantly (p less than .02, minimal) greater for the initially hypothermic animals when compared to normothermic controls. Cooling rates were unaffected by either treatment. We concluded from these studies that while preinduced hypothermia is extremely effective in prolonging the time to hyperthermic exhaustion, no additional beneficial thermoregulatory responses accrued as a result of this treatment. COLD AIR INHALATION, ESOPHAGEAL TEMPERATURE LUNG FUNCTION IN EXERCISING HUMANS Final Report

J. J. Jaeger, E. Chandler Deal, Jr., D. E. Roberts, and E. R. McFadden, Jr. 14 Mar. 1979 24 p refs Prepared in cooperation with Peter Bent Brigham Hospital, Boston, Mass. and Harvard Medical School, Boston, Mass.

(AD-A069510; USARIEM-M-7/79) Avail: NTIS HC A02/MF A01 CSCL 06/16

Eight normal individuals performed 10 min of bicycle exercise at 80% of their predicted maximum workload while breathing air at 22 C, saturated with water vapor and air at -40 C, dry. Rectal temperature and temperature at various locations along the length of the esophagus were measured during the exercise period. Pulmonary mechanics were measured before and 5 to 10 min after exercise. Temperature in the lower third of the esophagus was in close agreement with rectal temperature and was unaffected by level of respiratory heat exchange. Upper esophageal temperature decreased substantially during exercise, the magnitude of the decrease being dependent upon proximity to intrathoracic airways and the level of respiratory heat exchange. Subjects bronchodilated in response to exercise breathing warm air but this response was abolished by exercise breathing -40 C air. We conclude that at sufficiently high levels of respiratory heat exchange, normal individuals exhibit mild bronchoconstriction qualitatively similar to the severe bronchospasm induced in asthmatics by modest increases in respiratory heat exchange. A PORCINE BIOASSAY METHOD FOR ANALYSIS OF THERMALLY PROTECTIVE FABRICS: A CLINICAL GRADING SYSTEM Final Report

Thomas L. Wachtel, Francis S. Knox, III, and G. R. McCahan, Jr. Jun. 1978 35 p refs

(DA Proj. 3E7-62173-A-819)

(AD-A069202; USAARL-78-8) Avail: NTIS HC A03/MF A01 CSCL 06/3

A clinical grading system of severity of cutaneous burn was developed in a porcine cutaneous burn bioassay model using a flame thermal source. From surface appearance, color, sensation, tactile response, tenacity of hair anchoring, and appearance on cut section, a progression of the severity of burn injury was developed and documented with serial still photographs, high-speed cinephotomacrography and clinical descriptions. Variations in this grading scheme were required for skin protected or partially protected with fabrics, blackened with stove polish, or deprived of its circulation. GRA

CALCULATED LINEAR ENERGY TRANSFER SPECTRA OF HZE PARTICLES FOR THE FREE FLYER BIOSTACK EXPERIMENT ON THE LDEF-MISSION

W. Heinrich 1979 14 p refs

Avail: NTIS HC A02/MF A01

The LDEF-mission, scheduled for launch on the Space Shuttle in 1981, will fly for about nine months in a near earth orbit with an inclination angle of 28. During this flight the Free Flyer Biostack experiment will measure biological effects of individual heavy ions from cosmic radiation. The corresponding results of a calculation of linear energy transfer (LET) spectra in free space and inside the experiment are presented. The calculation considers the geomagnetic shielding of the spacecraft against charged particles with low energies and the disintegration of the heavy ions inside the experiment by fragmentation. For this mission the LET spectra will differ significantly from those of previous experiments. Primary particles with high LET are scarce. Inside the experiment the LET spectra change with depth of matter due to the energy loss and fragmentation of the nuclei. Author (ESA)

SUMMARY OF RADIOBIOLOGICAL FINDINGS: FROM SPACEFLIGHT TO GROUND-BASED STUDIES Annual Report

H. Buecker and R. Facius 1979 8 p refs Presented at 22d COSPAR Plenary Meeting, Bangalore, India, May/Jun. 1979

Avail: NTIS HC A02/MF A01

Radiobiological studies relative to manned space flight are reviewed. The prediction of relevant physical parameters, radiation effects and space flight factors, late effects, and heavy effects are discussed. It is concluded that a reliable a priori assessment of the radiobiological risk from longer duration space missions remains as yet a difficult task. The fact that some symptoms of biological injury become manifest only long after exposure is pointed out. Author (ESA)

PERFORMANCE, PHYSIOLOGICAL, AND OCULOMETER EVALUATION OF VTOL LANDING DISPLAYS Final Report

R. A. North, S. P. Stackhouse, and K. Graffunder NASA Sep. 1979 160 p refs

(Contract NAS1-15081)

(NASA-CR-3171; HONEYWELL-F0584-FR1-1) Avail: NTIS HC A08/MF A01 CSCL 05H

A methodological approach to measuring workload was investigated for evaluation of new concepts in VTOL aircraft displays. Physiological, visual response, and conventional flight performance measures were recorded for landing approaches performed in the NASA Visual Motion Simulator (VMS). Three

displays (two computer graphic and a conventional flight director), three crosswind amplitudes, and two motion base conditions (fixed vs moving base) were tested in a factorial design. Multivariate discriminant functions were formed from flight performance and/or visual response variables. The flight performance variable discriminant showed maximum differentation between crosswind conditions. The visual response measure discriminant maximized differences between fixed vs motion base conditions and experimental displays. Physiological variables were used to attempt to predict the discriminant function values for each subject/condition trial. The weights of the physiological variables in these equations showed agreement with previous studies. High muscle tension, light but irregular breathing patterns, and higher heart rate with low amplitude all produced higher scores on this scale and thus represent higher workload levels.

THE SCOPE, LIMITS, AND TRAINING IMPLICATIONS OF THREE MODELS OF AIRCRAFT PILOT EMERGENCY RESPONSE BEHAVIOR Research Report
Stuart E. Dreyfus and Hubert L. Dreyfus Feb. 1979 39 p refs
(Grant AF-AFOSR-3594-78; AF Proj. 2313)
(AD-A071320; ORC-79-2) Avail: NTIS HC A03/MF A01 CSCL 05/9

Three models of skill acquisition are proposed: (1) Nonsituational, (2) Intermediate, and (3) Situational. It is argued that only the third can account for highly skilled performance. The type of emergency training program each suggests and the level of pilot performance that each can be expected to produce is then investigated. We conclude that only training based on the situational model could possibly produce highly skilled emergency response behavior.

ROTARY WING PROFICIENCY-BASED AVIATOR SELECTION SYSTEM (PASS) Final Report, 15 Feb. 1977 - 1 Mar. 1978
Ruth Ann Marco, Richard F. Bull, Ronald L. Vidmar, and Brian D. Shipley, Jr. Jan. 1979 244 p refs
(Contract DAHC19-77-C-0015; DA Proj. 2Q2-63743-A-722)
(AD-A069838; MDC-1839; ARI-TR-79-A2) Avail: NTIS HC A11/MF A01 CSCL 05/9

The Proficiency-Based Aviator Selection System (PASS) is the result of an operational feasibility program developed to determine whether a learning sample approach could be used to select candidates for rotary wing aviator training. PASS was based on the Automatic Pilot Aptitude Measurement System (APAMS), a five-hour learning sample of fixed wing piloting tasks, developed for the Air Force Pilot Selection Program. PASS utilizes a UH-1 Flight Simulator (UH-1 FS) with a five-degree-of-freedom motion base to present the syllabus and test materials. the APAMS syllabus was extensively modified to conform to rotary wing flight operations, and the UH-1 FS software was reconfigured and formatted to meet the PASS requirements for training and performance measurement. Four voice synthesizers (VOTRAX) were interfaced to the UH-1 FS to provide vocal feedback. The operational capability of the PASS was demonstrated in a test with 11 experienced rotary wing pilots and 11 candidates for rotary wing training. The primary audience for this report will be operational personnel in training selection and simulation, particularly for rotary wing aircraft.

INTELLIGENCE AS AN INFORMATION PROCESSING CONCEPT Interim Report, 1 Apr. 1978 - 31 Mar. 1979
Earl Hunt May 1979 91 p refs Presented at the Brit. Psychological Soc. Conf. Nottingham, Engl. Apr. 1979
(Contract N00014-77-C-0225; NR Proj. 154-398; RR0420601)
(AD-A069953) Avail: NTIS HC A05/MF A01 CSCL 05/10

This paper examines the relationship between general cognitive competence and several aspects of information processing. Three sources of individual differences in information processing are proposed: structure, strategy, and general attentional resources. Structural factors set limits on the effectiveness of specific information processing steps. These factors appear to be important when we contrast the cognitive capacities of extreme groups, such as normal and mentally retarded persons but they account for only a small amount of the variability in homogeneous groups such as college students. The reason may be that within such groups, strategy of attacking problems is a more important source of variation, and moderates the relationship between simple information processing steps and complex reasoning. Finally, the fact that scores on almost all measures of cognitive competence are positively correlated may be related to the fact that all mental processes seem to compete for general attentional resources, and that individuals differ in the attentional resources they can bring to bear on any cognitive task.

DEVELOPMENT OF UNIT TRAINING AND EVALUATION TECHNIQUES FOR COMBAT-READY HELICOPTER PILOTS. TASK 2: ASSESSMENT OF ARTEP AND ATM TRAINING OBJECTIVES AND REQUIREMENTS FOR MAINTAINING OPERATIONAL READINESS Research Note, 21 Sep. 1977 - 20 Sep. 1978
Colin D. Ciley, Jr. and George E. Long May 1979 25 p refs
(Contract DAHC19-77-C-0059)
(AD-A069224; FTR-01-78; ARI-RN-79-11) Avail: NTIS HC A02/MF A01 CSCL 05/9

The recently published Army Training and Evaluation Programs (ARTEP) and Aircrew Training Manuals (ATM) represent a new concept of Army aviation unit training. Commanders are now responsible for determining the training requirements of their individual units and for developing and implementing programs to meet those requirements. The ARTEP and ATMs were designed to assist the unit commanders in carrying out that responsibility. This report presents the results of a brief review of the utility of these documents in the field and the extent to which their content adequately represents the training objectives and requirements for maintaining combat readiness. The research concludes that the documents have been well received and are being utilized effectively by field commanders; that they contain a valid, though not entirely complete, reflection of combat-readiness training objectives and requirements; but, that the required recordkeeping is burdensome and there is a need for a more effective feedback system between its users and its developers.

HC A05/MF A01 CSCL 05/9

The attainment and maintenance of combat readiness must be a, if not the, primary responsibility of every field unit commander. To carry out that responsibility, commanders of units with combat missions need training and evaluation techniques that will train pilots who already know how to fly to accomplish the requirements of a specific mission in a battlefield environment as part of the combined arms team. In order to provide the required techniques and procedures noted above, it is first necessary to derive an effective and efficient approach to their development. That approach should result in the availability of techniques and procedures that will facilitate the attainment of the highest level of combat readiness in the largest number of operational units in the shortest amount of time. This report describes the research effort directed at the derivation of an approach to the development of training and evaluation techniques and procedures for combat-readiness training that will meet the above noted requirements. It also describes the effort directed at the partial development of two training modules consistent with that approach. Author (GRA)

LINEAR STATE FEEDBACK CONTROL OF RIGID-LINK MANIPULATORS

David F. Golla May 1979 66 p refs
(UTIAS-TN-214; ISSN-0082-5263) Avail: NTIS
HC A04/MF A01

Linear state variable feedback controllers were designed for rigid-link manipulator arms. Two types of feedback schemes were considered, general rigid control (GRC) which allows for both interjoint and intrajoint feedback, and independent joint control (IJC) which allows for only intrajoint feedback. The design scheme consisted of arbitrary closed loop pole placement. Pole assignment algorithms were developed for both GRC and IJC feedback control schemes. Two controllers, IJC and GRC, were designed for a preliminary two-link rigid model of the space shuttle manipulator arm carrying a full payload in planar motion. The two models are simulated and the controllers compared. R.E.S.

HC A06/MF A01 CSCL 05/10

A new model for temporal and spatial encoding in the visual system is developed and presented. Three series of experiments were conducted to validate the model. The experiments used (1) a TV display of random, dynamic noise, and (2) a specially designed stimulus generator which produces very large homogeneous visual fields which can be easily modulated to reproduce a large variety of temporal waveforms having a rise time longer than 1 ms. The obtained results support the proposed model. The principal findings are: (1) Time integration of the eye is locally controlled at the retina and has very fast dynamics. (2) The obtained CFF curves suggest a correlation between the frequency at which maximum sensitivity is obtained and the sensitivity itself. (3) As predicted by the model, temporal bands are developed in the visual system for stimuli showing temporal discontinuity points. The width of the temporal bands was measured and a strong correlation was found between the temporal band width and the integration time. The width of the temporal bands is a function of the luminance level of the bands; the width is not dependent on the stimulus slope. The apparent brightness of the temporal band is, however, dependent on the slope of the stimulus. GRA

HELMET-MOUNTED DISPLAYS: AN EXPERIMENTAL INVESTIGATION OF DISPLAY LUMINANCE AND CONTRAST

B. J. Cohen, J. R. Bloomfield, and K. J. McAleese Jul. 1979 73 p refs
(Contract F33615-72-C-0420)
(AD-A072059; AMRL-TR-79-60) Avail: NTIS
HC A04/MF A01 CSCL 14/2

This study was carried out in order to validate experimentally the predictions of previous analytic work (Cohen, 1973). The objective was to determine the best combination of filter coatings and display luminances required for viewing the Helmet Mounted Display (HMD) against a wide, but operationally realistic variety of background luminances. The predictions relating beamsplitter transmittance, visor transmittance and display luminance to performance were largely supported by the data. GRA

HELMET-MOUNTED DISPLAYS: A COMPUTER-ASSISTED ANALYSIS OF DAY-NIGHT VISUAL REQUIREMENTS

B. J. Cohen Jul. 1979 296 p refs
(Contract F33615-72-C-0420; AF Proj. 5973)
(AD-A072061; HONEYWELL-2079-SR5; AMRL-TR-79-62)
Avail: NTIS HC A13/MF A01 CSCL 14/2

Honeywell has conducted a computer-assisted analysis in order to predict the range of ambient luminance conditions under which Helmet Mounted Display (HMD) imagery can be usefully resolved by an observer. This report examines those variables relating to ambient luminance, display luminance, and the attenuation of each in terms of optimizing display contrast minimizing differences in luminance to the two eyes. Visual performance predictions were made based upon comparing the analytically derived data with criteria values obtained from a limited number of technical reports. These criteria values were used even though it was recognized that the monocular see-through HMD is a unique system, thus limiting the applicability of data obtained from studies of related but still dissimilar systems such as head-up displays (HUDs) and occluded monocular HMDs. Among the factors affecting the quality of the displayed imagery, those variables most crucial to display luminance and contrast were systematically varied on a computer. GRA

THE ROLE OF THE UPPER FIELD OF VIEW IN SELECTED HMS/D VISUAL TASKS
B. J. Cohen and R. A. Levit 12 Jul. 1979 38 p refs
(Contract F33615-72-C-0420; AF Proj. 5973)
(AD-A072064; F4001-HSR1; AMRL-TR-79-65) Avail: NTIS HC A03/MF A01 CSCL 05/8

A study was conducted to determine whether opaque obstructions located in an observer's upper field of view would affect the visual detection of briefly illuminated targets located above his horizontal line of sight. Five versions of an acrylic visor considered for use with a helmet-mounted sight and display (HMS/D) contained one or more opaque areas located above their horizontal axes. Target detection performance for 12 subjects using the experimental visors was compared with the subjects' performance using an unobstructed control visor. Target appearance was signalled by a central cue light for six subjects (directed search), while the other six subjects were forced to rely only on peripheral detection of the briefly illuminated targets (undirected search). It was found that target detection performance was unaffected by either visor obstructions or by method of search, or any combination of the two. It was concluded that any of the visors would be usable from a visual performance standpoint. GRA

HELMET-MOUNTED SIGHT/DISPLAY PROGRAM: CESSNA 310 FLIGHT TEST
L. J. Mueller and B. A. Olson 12 Jul. 1979 84 p refs
(Contract F33615-72-C-0420)
(AD-A072058; F5517-HSR2; AMRL-TR-79-59) Avail: NTIS HC A05/MF A01 CSCL 05/8

The first phase of an engineering flight evaluation of operator performance with a Helmet-Mounted Sight/Display system has been completed. A total of 22 flights were conducted during which subjects utilized a helmet-mounted sight to control the pointing direction of a gimballed television camera and a helmet-mounted display to view the picture from the TV camera. Particular attention was paid to any indication of disorientation or discomfort attributable to the helmet-mounted equipment. No significant effect was noted. Secondary investigations considered the effect of servo dynamics in the TV camera system, angular motion limits in the pointing system, display field for view, display brightness, and environmental factors including target complexity and contrast, ambient brightness, and atmospheric haze. Interaction between the ambient scene viewed directly and through the combining glass of the helmet display caused no difficulty during the experiment. A second phase of this study considered the potential for inducing vertigo through the use of helmet-mounted equipment. The test plan and preliminary results for this experiment are presented in an appendix to this report. A detailed report on Phase II will be issued later. GRA

HEAD AIMING/TRACKING ACCURACY IN A HELICOPTER ENVIRONMENT Final Report
Robert W. Verona, John C. Johnson, and Heber D. Jones May 1979 86 p
(AD-A071359; USAARL-79-9) Avail: NTIS HC A05/MF A01 CSCL 05/8

This experiment was conducted to measure man's head aiming/tracking capability using a helmet mounted sighting device. The influences of target speed, helmet suspension types, and helmet weighting parameters on head aiming/tracking were investigated. If the aiming/tracking accuracy was sensitive to manipulation of these man-machine interface parameters, then it would seem to indicate that improved aiming/tracking accuracy could be obtained by improving the interface. The factors analyzed were eye dominance, helmet weighting, target speed, and helmet suspension. The eye dominance, helmet weighting, and target speed factors were statistically significant; however, the only factor of practical significance was target speed. A subject aiming at a static target with his head had an RMS error of about 3 milliradians. When the target began to move 4 degrees/second, the error increased to about 10.5 milliradians. When the subject began to vibrate, too, the error increased to 13 milliradians. When the target speed doubled, the vibrating error increased to 16.8 milliradians. GRA

AIR TRAFFIC CONTROLLERS (PERSONNEL)
The development of the ATC selection battery: A new procedure to make maximum use of available information when correcting correlations for restriction in range due to selection
[AD-A066132] N80-10788

AIRBORNE INFECTION
Amount of microorganisms discharged from the upper respiratory tract and integument of people confined in a sealed chamber
N80-10767

AIRCRAFT NOISE
Noise dosimeter measurements in the Air Force
A80-11636

AIRCRAFT PILOTS
Sickle cell trait and the aviator
A80-11639

ALGAE
Archean photoautotrophy - Some alternatives and limits
A80-12228

ALGORITHMS
The extended Kalman filter as pulmonary blood flow estimator
N80-10779

ALTITUDE ACCLIMATIZATION
Altitude acclimatization. Citations from the International Aerospace Abstracts data base
[NTIS/PS-79/0857/7] N80-11770

ALTITUDE SICKNESS
Course of altitude caisson disease in dogs exposed to accelerations
N80-10773

ALVEOLAR AIR
Investigation of alveoloarterial difference for oxygen and carbon dioxide when breathing high-density gas mixtures
N80-10774

AMAZON REGION (SOUTH AMERICA)
South American river morphology and hydrology
N80-10574

AMINO ACIDS
The radioracemization of isovaline - Cosmochemical implications --- gamma ray effects on Murchison meteorite primordial composition
A80-13018

ANAEROBES
Antiquity and evolutionary status of bacterial sulfate reduction - Sulfur isotope evidence
A80-12227

ANEMIAS
Sickle cell trait and the aviator
A80-11639

ANESTHETICS
Strength-interval curves of isolated rat papillary muscle during hypoxia and reoxygenation - Effect of lidocaine
A80-10421

ANTHROPOMETRY
Revised height/weight sizing programs for men's protective flight garments
[AD-A070732] N80-10803
Height/weight sizing programs for womens protective garments
[AD-A072376] N80-11781

ANTIHISTAMINICS
Effects of pseudoephedrine and triprolidine on visual performance
A80-11637

ARMED FORCES (UNITED STATES)
Height/weight sizing programs for womens protective garments
[AD-A072376] N80-11781

ARTIFICIAL GRAVITY
Lower body negative pressure box for +Gz simulation in the upright seated position
A80-11641

ATMOSPHERIC COMPOSITION
Was the pre-biotic atmosphere of the earth heavily reducing
A80-12223

ATMOSPHERIC PRESSURE
Oxygen levels safe for continued reproduction of Drosophila in normal and hypobaric atmospheres
A80-11631

AUDITORY STIMULI
Interstimulus interval as it affects temporary threshold shift in serial presentations of loud tones
[AD-A072006] N80-11762

AUTOTROPHS
Archean photoautotrophy - Some alternatives and limits
A80-12228

B

BACTERIA
Antiquity and evolutionary status of bacterial sulfate reduction - Sulfur isotope evidence
A80-12227

BARORECEPTORS
Control of blood pressure by carotid sinus baroreceptors in human beings
A80-10522

BEHAVIOR
Effects of exposure to hypoxic environment upon operant behavior in rats
A80-11521

Effect of hypokinesia on higher nervous activity of albino rats
N80-10762

BIBLIOGRAPHIES

BIOGEOCHEMISTRY
Antiquity and evolutionary status of bacterial sulfate reduction - Sulfur isotope evidence
A80-12227
Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota
A80-12230

BIOINSTRUMENTATION
Torso mounted electrocardiographic electrodes for routine clinical electrocardiography
A80-10423

BIOLOGICAL EFFECTS
Ultrastructure of chlorella pyrenoidosa cells (strain g-11-1) following growth under conditions of a prolonged space flight
N80-11001

Calculated linear energy transfer spectra of HZE particles for the free flyer Biostack experiment on the LDEF-mission
N80-11767

Summary of radiobiological findings: From spaceflight to ground-based studies
N80-11768

BIOLOGICAL EVOLUTION

Archean photoautotrophy - Some alternatives and limits
A80-12228

Oxygen as a factor in eukaryote evolution - Some effects of low levels of oxygen on Saccharomyces cerevisiae
A80-12229

BIOMEDICAL DATA

Plasma volume changes in fit men and women during a humid heat stress before and after an acclimation
N80-10781

STARPAHC space-oriented medical evaluation --- telemedicine system
[NASA-CR-160360] N80-11763

Cold air inhalation, esophageal temperature lung function in exercising humans
[AD-A069510] N80-11765

BIOMETRICS

Two important directions of development of Soviet biometry
N80-10997

BIONICS

Modeling and parameter identification of the human respiratory system
A80-11378

A model for auditory evoked potentials
N80-10780

Identification of controls in neuro-musculoskeletal control system models
[CSIR-TWISK-52] N80-11761

BIOTELEMETRY

STARPAHC space-oriented medical evaluation --- telemedicine system
[NASA-CR-160360] N80-11763

BLISTERS

Thermal conduction effects in human skin. Phase 2: Experimental validation and application of data in selection of materials
[AD-A068480] N80-10783

BLOOD FLOW

Regional cerebral blood flow in conscious miniature swine during high sustained +Gz acceleration stress
A80-11632

BLOOD PRESSURE

Control of blood pressure by carotid sinus baroreceptors in human beings
A80-10522

BLOOD VOLUME

Plasma volume changes in fit men and women during a humid heat stress before and after an acclimation
N80-10781

BLUE GREEN ALGAE

Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota
A80-12230

BODY TEMPERATURE

Evaluation of heat flow components from heater to skin in an electric thermal suit
N80-11000

The 5-thio-d-glucose thermoregulatory effects in mice at various temperatures
[AD-A069511] N80-11757

BODY WEIGHT

Animal experiment on the effects of repeated exposure to sustained Gz of moderate magnitude. I - Histo-pathological studies in rabbits
A80-11520

BRAIN

Microsecond sensitivity of the human visual system to irregular flicker
A80-11371

Effect of hypoxia on ATPase activity of the brain
N80-10776

Spatio-temporal intergration in the visual system
[AD-A069558] N80-11780

BRAIN CIRCULATION

Regional cerebral blood flow in conscious miniature swine during high sustained +Gz acceleration stress
A80-11632

BREATHING APPARATUS

Portable breathing system --- a breathing apparatus using a rebreathing system of heat exchangers for carbon dioxide removal
[NASA-CASE-MSC-16182-1] N80-10799

BURNS (INJURIES)

A porcine bioassay method for analysis of thermally protective fabrics: A clinical grading system
[AD-A069202] N80-11766

C

CABIN ATMOSPHERES

Toxic effects of chemicals in the altered gas environment of pressurized chambers
N80-10775

CALCIUM

Relationship between calcium and hydrogen ions in heart muscle
A80-10424

CARBOHYDRATE METABOLISM

Alternate use of carbohydrates and lipids as a form of regulating the physiological state
A80-10327

Role of mitochondrias in glyconeogenesis
A80-10331

CARBON DIOXIDE

Investigation of alveoloarterial difference for oxygen and carbon dioxide when breathing high-density gas mixtures
N80-10774

Carbon dioxide contributions in respiratory control
N80-11760

CARBON DIOXIDE REMOVAL

Portable breathing system --- a breathing apparatus using a rebreathing system of heat exchangers for carbon dioxide removal
[NASA-CASE-MSC-16182-1] N80-10799

Extended duration orbiter study: CO2 removal and water recovery
[NASA-CR-160317] N80-10800

CARBON MONOXIDE

The combined effect of carbon monoxide and hypokinesia
N80-10763

CARBONACEOUS CHONDRITES

The radioracemization of isovaline - Cosmochemical implications --- gamma ray effects on Murchison meteorite primordial composition
A80-13018

CARDIAC VENTRICLES

Relationship between calcium and hydrogen ions in heart muscle
A80-10424

CARDIOGRAMS

The normal values of spatial velocity in the second part of QRS /A cooperative study of 229 healthy individuals/
A80-10422

CARDIOLOGY

Cardiac reflexes in normotensive and spontaneously hypertensive rats
A80-10521

CARDIOVASCULAR SYSTEM

The 24-hour cycle and nocturnal depression of human cardiac output
A80-11634

Systolic time intervals and other cardiovascular changes following leg elevation
A80-11635

Some hemodynamic parameters during respiration of oxygen under excessive pressure
N80-10765

CAROTID SINUS REFLEX

Control of blood pressure by carotid sinus baroreceptors in human beings
A80-10522

CELLS (BIOLOGY)

Temporal organization of energy metabolism and the cellular clocks
A80-10328

Gamma rays - Further evidence for lack of a threshold dose for lethality to human cells
A80-10525

Oxygen as a factor in eukaryote evolution - Some effects of low levels of oxygen on Saccharomyces cerevisiae
A80-12229

Ultrastructural changes in canine hepatocytes during continuous chronic exposure to low doses of gamma radiation
N80-10768

Kidney cell electrophoresis
[NASA-CR-160353] N80-10782

Ultrastructure of chlorella pyrenoidosa cells (strain g-11-1) following growth under conditions of a prolonged space flight
N80-11001

CENTRAL NERVOUS SYSTEM

Effect of hypokinesia on higher nervous activity of albino rats
N80-10762

CENTRIFUGES

Use of short-arm centrifuge to prevent deconditioning when immersed in water (according to H-reflex)
N80-10772

CENTRIFUGING STRESS

Animal experiment on the effects of repeated exposure to sustained Gx of moderate magnitude. I - Histo-pathological studies in rabbits
A80-11520

CEREBELLUM

Levels and proportion of RNA and proteins in the system of the neuron: Vestibular nuclear neuroglia and cerebellum during hypokinesia
N80-10764

CEREBRAL CORTEX

Effects of exposure to hypoxic environment upon operant behavior in rats
A80-11521

Cortical mechanisms of integrative brain activity --- Russian book
A80-11876

CHEMICAL EVOLUTION

Antiquity and evolutionary status of bacterial sulfate reduction - Sulfur isotope evidence
A80-12227

Archean photoautotrophy - Some alternatives and limits
A80-12228

The radioracemization of isovaline - Cosmochemical implications --- gamma ray effects on Murchison meteorite primordial composition
A80-13018

CHEMOTHERAPY

Effect of transdermally administered scopolamine in preventing motion sickness
A80-11628

CHLORELLA

Ultrastructure of chlorella pyrenoidosa cells (strain g-11-1) following growth under conditions of a prolonged space flight
N80-11001

CHROMATES

Bichromate oxidability as a criterion of quantitative levels of organic impurities in reclaimed water
N80-10766

CIRCADIAN RHYTHMS

The 24-hour cycle and nocturnal depression of human cardiac output
A80-11634

CIVIL AVIATION

Age-related distinctions of changes in psychophysiological functions of pilots in the civil aviation under the influence of vibration and noise
N80-10757

CLINICAL MEDICINE

Torso mounted electrocardiographic electrodes for routine clinical electrocardiography
A80-10423

The extended Kalman filter as pulmonary blood flow estimator
N80-10779

The third system of regulation of animal and human functions, the active point system
N80-10996

STARPAHC space-oriented medical evaluation --- telemedicine system
[NASA-CR-160360] N80-11763

A porcine bioassay method for analysis of thermally protective fabrics: A clinical grading system
[AD-A069202] N80-11766

CLOSED ECOLOGICAL SYSTEMS

Oxygen levels safe for continued reproduction of Drosophila in normal and hypobaric atmospheres
A80-11631

Types of aquatic microcosms and their research applications
[CONF-781101-1] N80-10747

CLOTHING

Convective and radiative heat transfer coefficients for a clothed man
A80-11328

COCKPITS

Simulator fidelity in the learning of complex flight tasks
A80-10774

COGNITION

Evoked cortical potentials and information processing
[AD-A070789] N80-10794

Intelligence as an information processing concept
[AD-A069953] N80-11775

COGNITIVE PSYCHOLOGY

A study of complex learning theory and methodologies
[AD-A068323] N80-10792

Cognitive styles: A review of the literature
[AD-A069435] N80-11772

COLOR VISION

Use of the pupil to study the scotopic and chromatic mechanisms of vision in humans
N80-10777

COMBAT

Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 2: Assessment of ARTEP and ATM training objectives and requirements for maintaining operational readiness
[AD-A069224] N80-11776

Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 1: Development of an instruction program for individual and unit training with combat-ready pilots
[AD-A069242] N80-11777

COMPUTER ASSISTED INSTRUCTION

A memory retrieval aid for hypothesis generation
[AD-A072657] N80-10795

COMPUTER TECHNIQUES

A portable stand for assessing the dynamics of a working individual's functional state --- based on a microprocessor
N80-10750

CONCENTRATION (COMPOSITION)

Investigation of alveoloarterial difference for oxygen and carbon dioxide when breathing high-density gas mixtures
N80-10774

CONDUCTIVE HEAT TRANSFER

Evaluation of heat flow components from heater to skin in an electric thermal suit
N80-11000

CONFINEMENT

Amount of microorganisms discharged from the upper respiratory tract and integument of people confined in a sealed chamber
N80-10767

CONTROL

Carbon dioxide contributions in respiratory control
N80-11760

CONTROLLERS

Linear state feedback control of rigid-link manipulators
[UTIAS-TN-214] N80-11779

CONVECTIVE HEAT TRANSFER

Convective and radiative heat transfer coefficients for a clothed man
A80-11328

CORONARY ARTERY DISEASE

Resting heart rate in apparently healthy middle-aged men
A80-11374

CORPUSCULAR RADIATION
- Discrete multivariate analysis on radiobiological results from the biostack 3 Bacillus subtilis experiment N80-11759

COSMONAUTS
- Health prognosis in flight discussed N80-10995

COSMOS 782 SATELLITE
- The effect of dynamic factors of space flight on animal organisms [NASA-TM-75692] N80-10745

COST REDUCTION
- Flight hour reductions in fleet replacement pilot training through simulation A80-10764

CYTOLOGY
- Oxygen as a factor in eukaryote evolution - Some effects of low levels of oxygen on Saccharomyces cerevisiae A80-12229

D

DATA PROCESSING TERMINALS
- Design considerations for the man-machine relations user interface to TAS [AD-A071207] N80-10802

DATA SYSTEMS
- National library of medicine toxicology data base management system [ORNL/CSD/TM-80] N80-10785

DECISION MAKING
- Life stress, self-preoccupation, and social supports [AD-A068624] N80-10789

DECISION THEORY
- A memory retrieval aid for hypothesis generation [AD-A072657] N80-10795

DECOMPRESSION SICKNESS
- Course of altitude caisson disease in dogs exposed to accelerations N80-10773
- Early diagnosis of decompression sickness. Changes in the blood found shortly after decompression. Experiments on rats [MBL-1978-7] N80-11758

DEOXYRIBONUCLEIC ACID
- Effect of space flight conditions on deoxyribonucleoprotein and nucleic acid content of rat tissues N80-10760

DESERTS
- Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota A80-12230

DISPLAY DEVICES
- Performance, physiological, and oculometer evaluation of VTOL landing displays [NASA-CR-3171] N80-11771
- Integrated helmet-mounted sight/display program: Coating technology [AD-A072060] N80-11782
- Helmet-mounted displays: An experimental investigation of display luminance and contrast [AD-A072059] N80-11783
- Helmet-mounted displays: A computer-assisted analysis of day-night visual requirements [AD-A072061] N80-11784
- The role of the upper field of view in selected HMS/D visual tasks [AD-A072064] N80-11785
- Helmet-mounted sight/display program: Cessna 310 flight test [AD-A072058] N80-11786
- Operational pilot factors analysis report [AD-A072063] N80-11787
- Head aiming/tracking accuracy in a helicopter environment [AD-A071359] N80-11788

DISTILLATION
- Preprototype vapor compression distillation subsystem --- recovering potable water from wastewater [NASA-CR-160332] N80-10801

DOGS
- Ultrastructural changes in canine hepatocytes during continuous chronic exposure to low doses of gamma radiation N80-10768

DOSIMETERS
- Noise dosimeter measurements in the Air Force A80-11636

DROPS (LIQUIDS)
- Survey on eye comfort in aircraft. II - Use of ophthalmic solutions A80-11638

DROSOPHILA
- Oxygen levels safe for continued reproduction of Drosophila in normal and hypobaric atmospheres A80-11631

E

EARTH CRUST
- Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota A80-12230

EDUCATION
- The scope, limits, and training implications of three models of aircraft pilot emergency response behavior [AD-A071320] N80-11773
- Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 2: Assessment of ARTEP and ATM training objectives and requirements for maintaining operational readiness [AD-A069224] N80-11776
- Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 1: Development of an instruction program for individual and unit training with combat-ready pilots [AD-A069242] N80-11777

EFFECTIVE PERCEIVED NOISE LEVELS
- Interstimulus interval as it affects temporary threshold shift in serial presentations of loud tones [AD-A072006] N80-11762

ELECTROCARDIOGRAPHY
- Torso mounted electrocardiographic electrodes for routine clinical electrocardiography A80-10423

ELECTROCHEMISTRY
- Indirect microbial detection [NASA-CASE-LAR-12520-1] N80-11756

ELECTRODES
- Torso mounted electrocardiographic electrodes for routine clinical electrocardiography A80-10423

ELECTROLYTE METABOLISM
- Effect of hypoxia on fluid-electrolyte metabolism and renal function in man as related to different degrees of motor activity N80-10754

ELECTROMAGNETIC ABSORPTION
- Numerical calculation of electromagnetic energy deposition for a realistic model of man A80-10925

ELECTROPHORESIS
- Kidney cell electrophoresis [NASA-CR-160353] N80-10782

ELECTROPHYSIOLOGY
- Physiological measures of aircrew mental workload A80-10345
- Strength-interval curves of isolated rat papillary muscle during hypoxia and reoxygenation - Effect of lidocaine A80-10421

EMERGENCIES
- The scope, limits, and training implications of three models of aircraft pilot emergency response behavior [AD-A071320] N80-11773

ENERGY DISSIPATION
- Numerical calculation of electromagnetic energy deposition for a realistic model of man A80-10925

ENERGY DISTRIBUTION
- Numerical calculation of electromagnetic energy deposition for a realistic model of man A80-10925

ENERGY SPECTRA
- Calculated linear energy transfer spectra of HZE particles for the free flyer Biostack experiment on the LDEF-mission N80-11767

ENERGY TRANSFER
Regulation of the energy metabolism and physiological state of the organism --- Russian book
A80-10326
Calculated linear energy transfer spectra of HZE particles for the free flyer Biostack experiment on the LDEF-mission
N80-11767

ENVIRONMENT EFFECTS
Effects of exposure to hypoxic environment upon operant behavior in rats
A80-11521
Types of aquatic microcosms and their research applications
[CONF-781101-1] N80-10747

ENVIRONMENTAL MONITORING
Types of aquatic microcosms and their research applications
[CONF-781101-1] N80-10747

ENZYME ACTIVITY
Age-dependent dynamics of the succinate-dehydrogenase activity of lymphocytes in physically active and inactive persons
A80-10333
Variation of the enzymatic activity of blood lymphocytes at various stages of adaptation to physical loads
A80-10334
Effect of hypoxia on ATPase activity of the brain
N80-10776

ESTIMATING
Modeling and parameter identification of the human respiratory system
A80-11378

EXOBIOLOGY
The Viking mission and the search for life on Mars
A80-10738
Biochemical chromophores and the interstellar extinction at ultraviolet wavelengths
A80-12270

EXTRATERRESTRIAL LIFE
The Viking mission and the search for life on Mars
A80-10738

EYE (ANATOMY)
Survey on eye comfort in aircraft. II - Use of ophthalmic solutions
A80-11638

EYE MOVEMENTS
A modeling approach to the assessment of smooth pursuit eye movement
A80-11627

F

FATIGUE (BIOLOGY)
Self-motion magnitude estimation during linear oscillation - Changes with head orientation and following fatigue
A80-11629

FEEDBACK CONTROL
Linear state feedback control of rigid-link manipulators
[UTIAS-TN-214] N80-11779

FEMALES
Height/weight sizing programs for womens protective garments
[AD-A072376] N80-11781

FLICKER
Microsecond sensitivity of the human visual system to irregular flicker
A80-11371

FLIGHT CREWS
Behavioral measures of aircrew mental workload
A80-10344
Physiological measures of aircrew mental workload
A80-10345
Survey on eye comfort in aircraft. II - Use of ophthalmic solutions
A80-11638

FLIGHT FATIGUE
Psychoprophylaxis of fatigue and functional cardiovascular diseases in pilots by means of self-conditioning
N80-10771

FLIGHT FITNESS
Student pilots referred to the neuropsychiatry branch, USAFSAM 1968-78 Implications for selection
A80-11640

FLIGHT SIMULATION
Flight hour reductions in fleet replacement pilot training through simulation
A80-10764
Visual search performance in simulated remotely piloted vehicle utilization as a function of auxiliary task loading on the observer
[AD-A072402] N80-10804

FLIGHT SIMULATORS
Flight hour reductions in fleet replacement pilot training through simulation
A80-10764
Simulator fidelity in the learning of complex flight tasks
A80-10774
Behavioral scientific study on T-2 flight simulator. II - Comparison of pilot workload between aircraft and simulator
A80-11522
Lower body negative pressure box for +Gz simulation in the upright seated position
A80-11641

FLIGHT STRESS (BIOLOGY)
USSR Report: Space Biology and Aerospace Medicine, volume 13, no. 5, 1979 --- effects of space flight stress
[JPRS-74470] N80-10752
Effect of space flight conditions on deoxyribonucleoprotein and nucleic acid content of rat tissues
N80-10760

FLIGHT TESTS
Helmet-mounted sight/display program: Cessna 310 flight test
[AD-A072058] N80-11786

FLIGHT TIME
Flight hour reductions in fleet replacement pilot training through simulation
A80-10764

FLIGHT TRAINING
Rotary wing proficiency-based Aviator Selection System (PASS)
[AD-A069838] N80-11774
Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 2: Assessment of ARTEP and ATM training objectives and requirements for maintaining operational readiness
[AD-A069224] N80-11776
Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 1: Development of an instruction program for individual and unit training with combat-ready pilots
[AD-A069242] N80-11777

FREE FALL
Parabolic flight - Loss of sense of orientation
A80-13075

G

GAMMA RAYS
Gamma rays - Further evidence for lack of a threshold dose for lethality to human cells
A80-10525
The radioracemization of isovaline - Cosmochemical implications --- gamma ray effects on Murchison meteorite primordial composition
A80-13018
Ultrastructural changes in canine hepatocytes during continuous chronic exposure to low doses of gamma radiation
N80-10768

GAS COMPOSITION
Toxic effects of chemicals in the altered gas environment of pressurized chambers
N80-10775

GAS DENSITY
Investigation of alveoloarterial difference for oxygen and carbon dioxide when breathing high-density gas mixtures
N80-10774

GLUCOSE
Role of mitochondrias in glyconeogenesis
A80-10331
The 5-thio-d-glucose thermoregulatory effects in mice at various temperatures
[AD-A069511] N80-11757

GLUTAMATES
Variation of substrate contents and activity of enzymes of the energy metabolism in the heart under the action of glutamate during hypoxia and sodium nitride poisoning of animals
A80-10335

GRAVITATIONAL EFFECTS
Use of short-arm centrifuge to prevent deconditioning when immersed in water (according to H-reflex)
N80-10772

H

HEAD (ANATOMY)
Self-motion magnitude estimation during linear oscillation - Changes with head orientation and following fatigue
A80-11629

HEALTH
Health prognosis in flight discussed
N80-10995

HEALTH PHYSICS
Numerical calculation of electromagnetic energy deposition for a realistic model of man
A80-10925

HEART
Variation of substrate contents and activity of enzymes of the energy metabolism in the heart under the action of glutamate during hypoxia and sodium nitride poisoning of animals
A80-10335

Strength-interval curves of isolated rat papillary muscle during hypoxia and reoxygenation - Effect of lidocaine
A80-10421

HEART DISEASES
Psychoprophylaxis of fatigue and functional cardiovascular diseases in pilots by means of self-conditioning
N80-10771

HEART FUNCTION
Relationship between calcium and hydrogen ions in heart muscle
A80-10424

Cardiac reflexes in normotensive and spontaneously hypertensive rats
A80-10521

The 24-hour cycle and nocturnal depression of human cardiac output
A80-11634

Roentgenological examination of the human heart after 100-day hypokinesia
N80-10759

HEART RATE
Resting heart rate in apparently healthy middle-aged men
A80-11374

Animal experiment on the effects of repeated exposure to sustained Gz of moderate magnitude. I - Histo-pathological studies in rabbits
A80-11520

HEAT EXCHANGERS
Portable breathing system --- a breathing apparatus using a rebreathing system of heat exchangers for carbon dioxide removal
[NASA-CASE-MSC-16182-1] N80-10799

HEAT TRANSFER COEFFICIEN
coefficients for a clothed man
A80-11328

HEATING EQUIPMENT
Evaluation of heat flow components from heater to skin in an electric thermal suit
N80-11000

HELICOPTERS
Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 2: Assessment of ARTEP and ATM training objectives and requirements for maintaining operational readiness
[AD-A069224] N80-11776

Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 1: Development of an instruction program for individual and unit training with combat-ready pilots
[AD-A069242] N80-11777

HELMETS
Integrated helmet-mounted sight/display program: Coating technology
[AD-A072060] N80-11782

Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059] N80-11783

Helmet-mounted displays: A computer-assisted analysis of day-night visual requirements
[AD-A072061] N80-11784

The role of the upper field of view in selected HMS/D visual tasks
[AD-A072064] N80-11785

Helmet-mounted sight/display program: Cessna 310 flight test
[AD-A072058] N80-11786

Head aiming/tracking accuracy in a helicopter environment
[AD-A071359] N80-11788

HEMODYNAMICS
Regional cerebral blood flow in conscious miniature swine during high sustained +Gz acceleration stress
A80-11632

HIGH ACCELERATION
Regional cerebral blood flow in conscious miniature swine during high sustained +Gz acceleration stress
A80-11632

HIGH ALTITUDE BREATHING
Pulmonary adaptation to high altitude
[AD-A068317] N80-10784

HIGH ALTITUDE ENVIRONMENTS
Altitude acclimatization. Citations from the International Aerospace Abstracts data base
[NTIS/PS-79/0857/7] N80-11770

HIGH PRESSURE
Some hemodynamic parameters during respiration of oxygen under excessive pressure
N80-10765

HUMAN BEHAVIOR
Behavioral measures of aircrew mental workload
A80-10344

Life stress, self-preoccupation, and social supports
[AD-A068624] N80-10789

Research on the psychophysiological basis of human vigilance
[AD-A068562] N80-10790

Summary of project to develop handbook of human reliability analysis for nuclear power plant operations
[SAND-78-1812C] N80-10797

The scope, limits, and training implications of three models of aircraft pilot emergency response behavior
[AD-A071320] N80-11773

HUMAN BEINGS
Gamma rays - Further evidence for lack of a threshold dose for lethality to human cells
A80-10525

Some hemodynamic parameters during respiration of oxygen under excessive pressure
N80-10765

Amount of microorganisms discharged from the upper respiratory tract and integument of people confined in a sealed chamber
N80-10767

baroreceptors in human beings
A80-10522

Numerical calculation of electromagnetic energy deposition for a realistic model of man
A80-10925

Convective and radiative heat transfer coefficients for a clothed man
A80-11328

HUMAN CENTRIFUGES
Parabolic flight - Loss of sense of orientation
A80-13075

HUMAN FACTORS ENGINEERING
Work-science research on maximum work capacity and recovery time for informational-mental work based on the channel- and man-machine model along with superposed stress, using work in a hot environment as an example
A80-10650

Simulator fidelity in the learning of complex flight tasks
A80-10774
Use of the pupil to study the scotopic and chromatic mechanisms of vision in humans
N80-10777
Plasma volume changes in fit men and women during a humid heat stress before and after an acclimation
N80-10781
Thermal conduction effects in human skin. Phase 2: Experimental validation and application of data in selection of materials
[AD-A068480] N80-10783
Research on the psychophysiological basis of human vigilance
[AD-A068562] N80-10790
Remote operator performance comparing mono and stereo TV displays: The effects of visibility, learning and task factors
[AD-A068201] N80-10793
Summary of project to develop handbook of human reliability analysis for nuclear power plant operations
[SAND-78-1812C] N80-10797
Design considerations for the man-machine relations user interface to TAS
[AD-A071207] N80-10802
Revised height/weight sizing programs for men's protective flight garments
[AD-A070732] N80-10803
Helmet-mounted sight/display program: Cessna 310 flight test
[AD-A072058] N80-11786
Operational pilot factors analysis report
[AD-A072063] N80-11787

HUMAN PERFORMANCE
Effects of pseudoephedrine and triprolidine on visual performance
A80-11637
Summary of project to develop handbook of human reliability analysis for nuclear power plant operations
[SAND-78-1812C] N80-10797
Human vigilance investigation analysis of the pattern array test (further data analysis)
[UCRL-13891-3] N80-10798
Hypothermia induced by chlorpromazine or L-tryptophan effects on treadmill performance in the heat
[AD-A069849] N80-11764
Operational pilot factors analysis report
[AD-A072063] N80-11787

HUMAN REACTIONS
Modeling and parameter identification of the human respiratory system
A80-11378

HUMAN TOLERANCES
Altitude acclimatization. Citations from the International Aerospace Abstracts data base
[NTIS/PS-79/0857/7] N80-11770

HYDROGEN IONS
Relationship between calcium and hydrogen ions in heart muscle
A80-10424

HYDROLOGY
South American river morphology and hydrology
N80-10574

HYOSCINE
Effect of transdermally administered scopolamine in preventing motion sickness
A80-11628

HYPERTENSION
Cardiac reflexes in normotensive and spontaneously hypertensive rats
A80-10521

HYPOBARIC ATMOSPHERES
Oxygen levels safe for continued reproduction of Drosophila in normal and hypobaric atmospheres
A80-11631

HYPOKINESIA
Roentgenological examination of the human heart after 100-day hypokinesia
N80-10759
Reactions of rats to overheating following prolonged hypokinesia
N80-10761
Effect of hypokinesia on higher nervous activity of albino rats
N80-10762
The combined effect of carbon monoxide and hypokinesia
N80-10763
Levels and proportion of RNA and proteins in the system of the neuron: Vestibular nuclear neuroglia and cerebellum during hypokinesia
N80-10764

HYPOTHERMIA
Hypothermia induced by chlorpromazine or L-tryptophan effects on treadmill performance in the heat
[AD-A069849] N80-11764

HYPOTHESES
A memory retrieval aid for hypothesis generation
[AD-A072657] N80-10795

HYPOXIA
Variation of substrate contents and activity of enzymes of the energy metabolism in the heart under the action of glutamate during hypoxia and sodium nitride poisoning of animals
A80-10335
Strength-interval curves of isolated rat papillary muscle during hypoxia and reoxygenation - Effect of lidocaine
A80-10421
Effects of exposure to hypoxic environment upon operant behavior in rats
A80-11521
Effect of hypoxia on fluid-electrolyte metabolism and renal function in man as related to different degrees of motor activity
N80-10754
Effect of hypoxia on ATPase activity of the brain
N80-10776
Pulmonary adaptation to high altitude
[AD-A068317] N80-10784
Effect of a rapid 4 percent carboxyhemoglobin saturation increase on maximal treadmill exercise
[PB-296627/3] N80-10786

I

IMPACT ACCELERATION
An examination of statistical impact acceleration injury prediction models based on torque and force variables
[AD-A071625] N80-10746

IN-FLIGHT MONITORING
STARPAHC space-oriented medical evaluation --- telemedicine system
[NASA-CR-160360] N80-11763

INDUSTRIAL SAFETY
Analysis of airborne particulates and human urine by inductively coupled plasma-atomic emission spectrometry
[PB-297775/9] N80-10787

INFORMATION RETRIEVAL
A memory retrieval aid for hypothesis generation
[AD-A072657] N80-10795

INFORMATION SYSTEMS
Telecommunications in medicine. A bibliography with abstracts
[NTIS/PS-79/0786/8] N80-11769

INJURIES
An examination of statistical impact acceleration injury prediction models based on torque and force variables
[AD-A071625] N80-10746

INTELLIGENCE
Intelligence as an information processing concept
[AD-A069953] N80-11775

INTERSTELLAR EXTINCTION
Biochemical chromophores and the interstellar extinction at ultraviolet wavelengths
A80-12270

IONIZING RADIATION
A method of defining the optimum level of ionizing radiation from determinate sources during space flights
N80-10770

K

KNOWLEDGE
A study of complex learning theory and methodologies
[AD-A068323] N80-10792

KREBS CYCLE
Oxidation of pyruvate in mitochondrias: Mathematical model - Regulation of the Kreb's cycle by adenine and pyridine nucleotides
A80-10329

L

LEARNING
An aptitude-strategy interaction in linear syllogistic reasoning
[AD-A068498] N80-10791
A study of complex learning theory and methodologies
[AD-A068323] N80-10792
Remote operator performance comparing mono and stereo TV displays: The effects of visibility, learning and task factors
[AD-A068201] N80-10793
Modality effects in scanning nonverbal information: Evidence for multiple memory codes
[AD-A072297] N80-10796
Cognitive styles: A review of the literature
[AD-A069435] N80-11772

LEG (ANATOMY)
Systolic time intervals and other cardiovascular changes following leg elevation
A80-11635

LIFE SUPPORT SYSTEMS
Extended duration orbiter study: CO2 removal and water recovery
[NASA-CR-160317] N80-10800

LIGHT (VISIBLE RADIATION)
Microsecond sensitivity of the human visual system to irregular flicker
A80-11371

LINEAR ENERGY TRANSFER (LET)
Discrete multivariate analysis on radiobiological results from the biostack 3 Bacillus subtilis experiment
N80-11759

LIPID METABOLISM
Alternate use of carbohydrates and lipids as a form of regulating the physiological state
A80-10327

LIPIDS
Rush nuts (Cyperus esculentus) as a source of vegetable oil in a closed life support system
N80-10769

LIVER
Role of mitochondrias in glyconeogenesis
A80-10331
Phosphoenolpyruvate synthesis and reactions of the respiratory chain of mitochondrias in the liver of animals during physiological adaptive responses
A80-10332
Ultrastructural changes in canine hepatocytes during continuous chronic exposure to low doses of gamma radiation
N80-10768

LOUDNESS
Interstimulus interval as it affects temporary threshold shift in serial presentations of loud tones
[AD-A072006] N80-11762

LUMINANCE
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059] N80-11783

LUNGS
The extended Kalman filter as pulmonary blood flow estimator
N80-10779

LYMPHOCYTES
Age-dependent dynamics of the succinate-dehydrogenase activity of lymphocytes in physically active and inactive persons
A80-10333
Variation of the enzymatic activity of blood lymphocytes at various stages of adaptation to physical loads
A80-10334

M

MALES
Revised height/weight sizing programs for men's protective flight garments
[AD-A070732] N80-10803

MAN MACHINE SYSTEMS
Work-science research on maximum work capacity and recovery time for informational-mental work based on the channel- and man-machine model along with superposed stress, using work in a hot environment as an example
A80-10650
Design considerations for the man-machine relations user interface to TAS
[AD-A071207] N80-10802
Linear state feedback control of rigid-link manipulators
[UTIAS-TN-214] N80-11779
Integrated helmet-mounted sight/display program: Coating technology
[AD-A072060] N80-11782
Helmet-mounted displays: A computer-assisted analysis of day-night visual requirements
[AD-A072061] N80-11784
The role of the upper field of view in selected HMS/D visual tasks
[AD-A072064] N80-11785
Operational pilot factors analysis report
[AD-A072063] N80-11787
Head aiming/tracking accuracy in a helicopter environment
[AD-A071359] N80-11788

MANNED SPACE FLIGHT
Problems of pharmacology in space medicine
N80-10749
Health prognosis in flight discussed
N80-10995
Summary of radiobiological findings: From spaceflight to ground-based studies
N80-11768

MARS SURFACE
The Viking mission and the search for life on Mars
A80-10738

MATHEMATICAL MODELS
A model for auditory evoked potentials
N80-10780

MEDICAL SCIENCE
National library of medicine toxicology data base management system
[ORNL/CSD/TM-80] N80-10785

MEDICAL SERVICES
Telecommunications in medicine. A bibliography with abstracts
[NTIS/PS-79/0786/8] N80-11769

MEMORY
Modality effects in scanning nonverbal information: Evidence for multiple memory codes
[AD-A072297] N80-10796

MENTAL PERFORMANCE
Behavioral measures of aircrew mental workload
A80-10344
Work-science research on maximum work capacity and recovery time for informational-mental work based on the channel- and man-machine model along with superposed stress, using work in a hot environment as an example
A80-10650
An aptitude-strategy interaction in linear syllogistic reasoning
[AD-A068498] N80-10791
Modality effects in scanning nonverbal information: Evidence for multiple memory codes
[AD-A072297] N80-10796
Human vigilance investigation analysis of the pattern array test (further data analysis)
[UCRL-13891-3] N80-10798
Intelligence as an information processing concept
[AD-A069953] N80-11775

METABOLISM
Regulation of the energy metabolism and physiological state of the organism --- Russian book
A80-10326
Temporal organization of energy metabolism and the cellular clocks
A80-10328

METEORITIC COMPOSITION
The radioracemization of isovaline - Cosmochemical implications --- gamma ray effects on Murchison meteorite primordial composition
A80-13018

MICE
The 5-thio-d-glucose thermoregulatory effects in mice at various temperatures
[AD-A069511] N80-11757
MICROBIOLOGY
Indirect microbial detection
[NASA-CASE-LAR-12520-1] N80-11756
MICROORGANISMS
Oxygen as a factor in eukaryote evolution - Some effects of low levels of oxygen on Saccharomyces cerevisiae
A80-12229
Amount of microorganisms discharged from the upper respiratory tract and integument of people confined in a sealed chamber
N80-10767
Indirect microbial detection
[NASA-CASE-LAR-12520-1] N80-11756
MICROPROCESSORS
A portable stand for assessing the dynamics of a working individual's functional state --- based on a microprocessor
N80-10750
MICROSTRUCTURE
Ultrastructure of chlorella pyrenoidosa cells (strain g-11-1) following growth under conditions of a prolonged space flight
N80-11001
MICROWAVE RESONANCE
Numerical calculation of electromagnetic energy deposition for a realistic model of man
A80-10925
MITOCHONDRIA
Oxidation of pyruvate in mitochondrias: Mathematical model - Regulation of the Kreb's cycle by adenine and pyridine nucleotides
A80-10329
Role of mitochondrias in glyconeogenesis
A80-10331
Phosphoenolpyruvate synthesis and reactions of the respiratory chain of mitochondrias in the liver of animals during physiological adaptive responses
A80-10332
MORPHOLOGY
South American river morphology and hydrology
N80-10574
Ultrastructural changes in canine hepatocytes during continuous chronic exposure to low doses of gamma radiation
N80-10768
MOTION PERCEPTION
Self-motion magnitude estimation during linear oscillation - Changes with head orientation and following fatigue
A80-11629
Evoked cortical potentials and information processing
[AD-A070789] N80-10794
MOTION SICKNESS
Some influences of vision on susceptibility to motion sickness
A80-11630
Current conceptions on the genesis of vestibulovegetative disorders in weightlessness
N80-10753
MOTION SICKNESS DRUGS
Effect of transdermally administered scopolamine in preventing motion sickness
A80-11628
MULTIVARIATE STATISTICAL ANALYSIS
Discrete multivariate analysis on radiobiological results from the biostack 3 Bacillus subtilis experiment
N80-11759
MUSCULAR FUNCTION
Relationship between calcium and hydrogen ions in heart muscle
A80-10424
MUSCULAR STRENGTH
Strength-interval curves of isolated rat papillary muscle during hypoxia and reoxygenation - Effect of lidocaine
A80-10421
MUSCULOSKELETAL SYSTEM
Identification of controls in neuro-musculoskeletal control system models
[CSIR-TWISK-52] N80-11761
MYOCARDIUM
Relationship between calcium and hydrogen ions in heart muscle
A80-10424

N

NEUROGLIA
Levels and proportion of RNA and proteins in the system of the neuron: Vestibular nuclear neuroglia and cerebellum during hypokinesia
N80-10764
NEURONS
Levels and proportion of RNA and proteins in the system of the neuron: Vestibular nuclear neuroglia and cerebellum during hypokinesia
N80-10764
NEUROPHYSIOLOGY
Cortical mechanisms of integrative brain activity --- Russian book
A80-11876
NEUROPSYCHIATRY
Student pilots referred to the neuropsychiatry branch, USAFSAM 1968-78 Implications for selection
A80-11640
NIGHT VISION
Use of the pupil to study the scotopic and chromatic mechanisms of vision in humans
N80-10777
NOISE MEASUREMENT
Noise dosimeter measurements in the Air Force
A80-11636
NONFLAMMABLE MATERIALS
A porcine bioassay method for analysis of thermally protective fabrics: A clinical grading system
[AD-A069202] N80-11766
NUCLEOTIDES
Oxidation of pyruvate in mitochondrias: Mathematical model - Regulation of the Kreb's cycle by adenine and pyridine nucleotides
A80-10329
Effect of space flight conditions on deoxyribonucleoprotein and nucleic acid content of rat tissues
N80-10760
NUTRITION
Dietary supplements used to prevent some changes in the human body in the presence of nervous and emotional stress
N80-10758
NUTRITIONAL REQUIREMENTS
Rush nuts (Cyperus esculentus) as a source of vegetable oil in a closed life support system
N80-10769
NUTS (FRUITS)
Rush nuts (Cyperus esculentus) as a source of vegetable oil in a closed life support system
N80-10769

O

OCULOMETERS
Performance, physiological, and oculometer evaluation of VTOL landing displays
[NASA-CR-3171] N80-11771
OPERATOR PERFORMANCE
Work-science research on maximum work capacity and recovery time for informational-mental work based on the channel- and man-machine model along with superposed stress, using work in a hot environment as an example
A80-10650
Remote operator performance comparing mono and stereo TV displays: The effects of visibility, learning and task factors
[AD-A068201] N80-10793
OPHTHALMODYNAMOMETRY
Microsecond sensitivity of the human visual system to irregular flicker
A80-11371
OPHTHALMOLOGY
Survey on eye comfort in aircraft. II - Use of ophthalmic solutions
A80-11638
OPTICAL TRACKING
A modeling approach to the assessment of smooth pursuit eye movement
A80-11627

ORGANIC COMPOUNDS
Bichromate oxidability as a criterion of quantitative levels of organic impurities in reclaimed water N80-10766

OSCILLATIONS
Self-motion magnitude estimation during linear oscillation - Changes with head orientation and following fatigue A80-11629

OXIDATION
Oxidation of pyruvate in mitochondrias: Mathematical model - Regulation of the Kreb's cycle by adenine and pyridine nucleotides A80-10329
Factors affecting the regulation of biological oxidation processes in tissue specimens A80-10330
Bichromate oxidability as a criterion of quantitative levels of organic impurities in reclaimed water N80-10766

OXYGEN
Oxygen levels safe for continued reproduction of Drosophila in normal and hypobaric atmospheres A80-11631
Oxygen as a factor in eukaryote evolution - Some effects of low levels of oxygen on Saccharomyces cerevisiae A80-12229
Investigation of alveoloarterial difference for oxygen and carbon dioxide when breathing high-density gas mixtures N80-10774

OXYGEN BREATHING
Some hemodynamic parameters during respiration of oxygen under excessive pressure N80-10765

OXYGEN CONSUMPTION
Strength-interval curves of isolated rat papillary muscle during hypoxia and reoxygenation - Effect of lidocaine A80-10421

OXYGEN PRODUCTION
Was the pre-biotic atmosphere of the earth heavily reducing A80-12223

P

PALEONTOLOGY
Archean photoautotrophy - Some alternatives and limits A80-12228

PARABOLIC FLIGHT
Parabolic flight - Loss of sense of orientation A80-13075

PATHOLOGICAL EFFECTS
Animal experiment on the effects of repeated exposure to sustained Gz of moderate magnitude. I - Histo-pathological studies in rabbits A80-11520

PERCEPTION
Cognitive styles: A review of the literature [AD-A069435] N80-11772

PERIPHERAL CIRCULATION
Some hemodynamic parameters during respiration of oxygen under excessive pressure N80-10765

PERMANGANATES
Bichromate oxidability as a criterion of quantitative levels of organic impurities in reclaimed water N80-10766

PERSONNEL SELECTION
The development of the ATC selection battery: A new procedure to make maximum use of available information when correcting correlations for restriction in range due to selection [AD-A066132] N80-10788

PHARMACOLOGY
Effects of pseudoephedrine and triprolidine on visual performance A80-11637
USSR Report: Biomedical and Behavioral Sciences, no. 122 --- emphasizing pharmacology in space flight, psychometric test equipment, and air filters [JPRS-74365] N80-10748
Problems of pharmacology in space medicine N80-10749

PHOSPHORUS METABOLISM
Phosphoenolpyruvate synthesis and reactions of the respiratory chain of mitochondrias in the liver of animals during physiological adaptive responses A80-10332

PHOTOSENSITIVITY
Microsecond sensitivity of the human visual system to irregular flicker A80-11371

PHOTOSYNTHESIS
Was the pre-biotic atmosphere of the earth heavily reducing A80-12223
Archean photoautotrophy - Some alternatives and limits A80-12228

PHYSICAL EXERCISE
Effect of a rapid 4 percent carboxyhemoglobin saturation increase on maximal treadmill exercise [PB-296627/3] N80-10786
Hypothermia induced by chlorpromazine or L-tryptophan effects on treadmill performance in the heat [AD-A069849] N80-11764
Cold air inhalation, esophageal temperature lung function in exercising humans [AD-A069510] N80-11765

PHYSICAL FITNESS
Age-dependent dynamics of the succinate-dehydrogenase activity of lymphocytes in physically active and inactive persons A80-10333

PHYSIOCHEMISTRY
Pulmonary adaptation to high altitude [AD-A068317] N80-10784

PHYSIOLOGICAL EFFECTS
Parabolic flight - Loss of sense of orientation A80-13075
Effect of space flight conditions on deoxyribonucleoprotein and nucleic acid content of rat tissues N80-10760
The combined effect of carbon monoxide and hypokinesia N80-10763
Pulmonary adaptation to high altitude [AD-A068317] N80-10784

PHYSIOLOGICAL RESPONSES
Regulation of the energy metabolism and physiological state of the organism --- Russian book A80-10326
Alternate use of carbohydrates and lipids as a form of regulating the physiological state A80-10327
Variation of the enzymatic activity of blood lymphocytes at various stages of adaptation to physical loads A80-10334
Physiological measures of aircrew mental workload A80-10345
Modeling and parameter identification of the human respiratory system A80-11378
Animal experiment on the effects of repeated exposure to sustained Gz of moderate magnitude. I - Histo-pathological studies in rabbits A80-11520
Effects of exposure to hypoxic environment upon operant behavior in rats A80-11521

PHYSIOLOGICAL TESTS
Variation of substrate contents and activity of enzymes of the energy metabolism in the heart under the action of glutamate during hypoxia and sodium nitride poisoning of animals A80-10335
Resting heart rate in apparently healthy middle-aged men A80-11374
Effect of transdermally administered scopolamine in preventing motion sickness A80-11628
Some influences of vision on susceptibility to motion sickness A80-11630

best copy available

Responses of domestic fowl to repeated +Gz acceleration A80-11633

PILOT PERFORMANCE

Age-related distinctions of changes in psychophysiological functions of pilots in the civil aviation under the influence of vibration and noise N80-10757

The scope, limits, and training implications of three models of aircraft pilot emergency response behavior [AD-A071320] N80-11773

PILOT SELECTION

Student pilots referred to the neuropsychiatry branch, USAFSAM 1968-78 Implications for selection A80-11640

Rotary wing proficiency-based Aviator Selection System (PASS) [AD-A069838] N80-11774

PILOT TRAINING

Flight hour reductions in fleet replacement pilot training through simulation A80-10764

Simulator fidelity in the learning of complex flight tasks A80-10774

Behavioral scientific study on T-2 flight simulator. II - Comparison of pilot workload between aircraft and simulator A80-11522

Psychoprophylaxis of fatigue and functional cardiovascular diseases in pilots by means of self-conditioning N80-10771

Rotary wing proficiency-based Aviator Selection System (PASS) [AD-A069838] N80-11774

PLANETOLOGY

The Viking mission and the search for life on Mars A80-10738

PLETHYSMOGRAPHY

The 24-hour cycle and nocturnal depression of human cardiac output A80-11634

POLLUTION MONITORING

Noise dosimeter measurements in the Air Force A80-11636

Types of aquatic microcosms and their research applications [CONF-781101-1] N80-10747

PORTABLE LIFE SUPPORT SYSTEMS

Portable breathing system --- a breathing apparatus using a rebreathing system of heat exchangers for carbon dioxide removal [NASA-CASE-MSC-16182-1] N80-10799

POSTURE

Systolic time intervals and other cardiovascular changes following leg elevation A80-11635

POTABLE WATER

Preprototype vapor compression distillation subsystem --- recovering potable water from wastewater [NASA-CR-160332] N80-10801

POTENTIOMETERS (INSTRUMENTS)

Indirect microbial detection [NASA-CASE-LAR-12520-1] N80-11756

PRECAMBRIAN PERIOD

Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota A80-12230

PRESSURE CHAMBERS

Toxic effects of chemicals in the altered gas environment of pressurized chambers N80-10775

PRIMITIVE EARTH ATMOSPHERE

Was the pre-biotic atmosphere of the earth heavily reducing A80-12223

PROBLEM SOLVING

An aptitude-strategy interaction in linear syllogistic reasoning [AD-A068498] N80-10791

Intelligence as an information processing concept [AD-A069953] N80-11775

PROGNOSIS

Early diagnosis of decompression sickness. Changes in the blood found shortly after decompression. Experiments on rats [MBL-1978-7] N80-11758

PROTECTIVE CLOTHING

Revised height/weight sizing programs for men's protective flight garments [AD-A070732] N80-10803

Height/weight sizing programs for womens protective garments [AD-A072376] N80-11781

PROTEINS

Levels and proportion of RNA and proteins in the system of the neuron: Vestibular nuclear neuroglia and cerebellum during hypokinesia N80-10764

PSYCHOLOGICAL FACTORS

Student pilots referred to the neuropsychiatry branch, USAFSAM 1968-78 Implications for selection A80-11640

PSYCHOMETRICS

USSR Report: Biomedical and Behavioral Sciences, no. 122 --- emphasizing pharmacology in space flight, psychometric test equipment, and air filters [JPRS-74365] N80-10748

A portable stand for assessing the dynamics of a working individual's functional state --- based on a microprocessor N80-10750

An aptitude-strategy interaction in linear syllogistic reasoning [AD-A068498] N80-10791

PSYCHOPHYSIOLOGY

Age-related distinctions of changes in psychophysiological functions of pilots in the civil aviation under the influence of vibration and noise N80-10757

Research on the psychophysiological basis of human vigilance [AD-A068562] N80-10790

Evoked cortical potentials and information processing [AD-A070789] N80-10794

PULMONARY CIRCULATION

The extended Kalman filter as pulmonary blood flow estimator N80-10779

PULMONARY FUNCTIONS

Cold air inhalation, esophageal temperature lung function in exercising humans [AD-A069510] N80-11765

PURSUIT TRACKING

A modeling approach to the assessment of smooth pursuit eye movement A80-11627

PYRUVATES

Oxidation of pyruvate in mitochondrias: Mathematical model - Regulation of the Kreb's cycle by adenine and pyridine nucleotides A80-10329

Phosphoenolpyruvate synthesis and reactions of the respiratory chain of mitochondrias in the liver of animals during physiological adaptive responses A80-10332

Q

QUANTITATIVE ANALYSIS

Bichromate oxidability as a criterion of quantitative levels of organic impurities in reclaimed water N80-10766

R

RADIATION EFFECTS

The radioracemization of isovaline - Cosmochemical implications --- gamma ray effects on Murchison meteorite primordial composition A80-13018

Summary of radiobiological findings: From spaceflight to ground-based studies N80-11768

RADIATION HAZARDS
Calculated linear energy transfer spectra of HZE particles for the free flyer Biostack experiment on the LDEF-mission
N80-11767

RADIATION MEDICINE
Summary of radiobiological findings: From spaceflight to ground-based studies
N80-11768

RADIATION PROTECTION
A method of defining the optimum level of ionizing radiation from determinate sources during space flights
N80-10770

RADIATION TOLERANCE
Gamma rays - Further evidence for lack of a threshold dose for lethality to human cells
A80-10525

RADIATIVE HEAT TRANSFER
Convective and radiative heat transfer coefficients for a clothed man
A80-11328

RADIO ASTRONOMY
Summary of radiobiological findings: From spaceflight to ground-based studies
N80-11768

RADIOBIOLOGY
Discrete multivariate analysis on radiobiological results from the biostack 3 Bacillus subtilis experiment
N80-11759

RADIOPATHOLOGY
Gamma rays - Further evidence for lack of a threshold dose for lethality to human cells
A80-10525

RANKING
A porcine bioassay method for analysis of thermally protective fabrics: A clinical grading system
[AD-A069202] N80-11766

RATS
Effect of space flight conditions on deoxyribonucleoprotein and nucleic acid content of rat tissues
N80-10760

Reactions of rats to overheating following prolonged hypokinesia
N80-10761

Effect of hypokinesia on higher nervous activity of albino rats
N80-10762

The combined effect of carbon monoxide and hypokinesia
N80-10763

Levels and proportion of RNA and proteins in the system of the neuron: Vestibular nuclear neuroglia and cerebellum during hypokinesia
N80-10764

Early diagnosis of decompression sickness. Changes in the blood found shortly after decompression. Experiments on rats
[MBL-1978-7] N80-11758

REBREATHING
Portable breathing system --- a breathing apparatus using a rebreathing system of heat exchangers for carbon dioxide removal
[NASA-CASE-MSC-16182-1] N80-10799

RECOVERABILITY
Interstimulus interval as it affects temporary threshold shift in serial presentations of loud tones
[AD-A072006] N80-11762

REFLEXES
Cardiac reflexes in normotensive and spontaneously hypertensive rats
A80-10521

REMOTE MANIPULATOR SYSTEM
Linear state feedback control of rigid-link manipulators
[UTIAS-TN-214] N80-11779

REMOTELY PILOTED VEHICLES
Visual search performance in simulated remotely piloted vehicle utilization as a function of auxiliary task loading on the observer
[AD-A072402] N80-10804

RENAL FUNCTION
Effect of hypoxia on fluid-electrolyte metabolism and renal function in man as related to different degrees of motor activity
N80-10754

REPRODUCTION (BIOLOGY)
Oxygen levels safe for continued reproduction of Drosophila in normal and hypobaric atmospheres
A80-11631

RESPIRATION
Investigation of alveoloarterial difference for oxygen and carbon dioxide when breathing high-density gas mixtures
N80-10774

Cold air inhalation, esophageal temperature lung function in exercising humans
[AD-A069510] N80-11765

RESPIRATORY PHYSIOLOGY
Factors affecting the regulation of biological oxidation processes in tissue specimens
A80-10330

Phosphoenolpyruvate synthesis and reactions of the respiratory chain of mitochondrias in the liver of animals during physiological adaptive responses
A80-10332

Carbon dioxide contributions in respiratory control
N80-11760

RESPIRATORY SYSTEM
Modeling and parameter identification of the human respiratory system
A80-11378

Carbon dioxide contributions in respiratory control
N80-11760

RETINA
Spatio-temporal intergration in the visual system
[AD-A069558] N80-11780

RHYTHM (BIOLOGY)
Alternate use of carbohydrates and lipids as a form of regulating the physiological state
A80-10327

RIBONUCLEIC ACIDS
Levels and proportion of RNA and proteins in the system of the neuron: Vestibular nuclear neuroglia and cerebellum during hypokinesia
N80-10764

RIVERS
South American river morphology and hydrology
N80-10574

RUNNING
Variation of the enzymatic activity of blood lymphocytes at various stages of adaptation to physical loads
A80-10334

S

SENSORIMOTOR PERFORMANCE
Cortical mechanisms of integrative brain activity --- Russian book
A80-11876

Parabolic flight - Loss of sense of orientation
A80-13075

Cognitive styles: A review of the literature
[AD-A069435] N80-11772

SIGNAL PROCESSING
Modeling and parameter identification of the human respiratory system
A80-11378

SITTING POSITION
Lower body negative pressure box for +Gz simulation in the upright seated position
A80-11641

SKIN (ANATOMY)
Thermal conduction effects in human skin. Phase 2: Experimental validation and application of data in selection of materials
[AD-A068480] N80-10783

SOILS
Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota
A80-12230

SOUTH AMERICA
South American river morphology and hydrology
N80-10574

SPACE FLIGHT
A method of defining the optimum level of ionizing radiation from determinate sources during space flights
N80-10770

SPACE FLIGHT FEEDING
Rush nuts (Cyperus esculentus) as a source of vegetable oil in a closed life support system
N80-10769

SPACE FLIGHT STRESS
USSR Report: Space Biology and Aerospace Medicine, volume 13, no. 5, 1979 --- effects of space flight stress
[JPRS-74470] N80-10752
Dietary supplements used to prevent some changes in the human body in the presence of nervous and emotional stress
N80-10758
Course of altitude caisson disease in dogs exposed to accelerations
N80-10773

SPACE SHUTTLE ORBITERS
Extended duration orbiter study: CO2 removal and water recovery
[NASA-CR-160317] N80-10800

SPACE SHUTTLES
Calculated linear energy transfer spectra of HZE particles for the free flyer Biostack experiment on the LDEF-mission
N80-11767

SPACECRAFT ENVIRONMENTS
The effect of dynamic factors of space flight on animal organisms
[NASA-TM-75692] N80-10745

SPACECREWS
STARPAHC space-oriented medical evaluation --- telemedicine system
[NASA-CR-160360] N80-11763

SPORES
Discrete multivariate analysis on radiobiological results from the biostack 3 Bacillus subtilis experiment
N80-11759

STATISTICAL CORRELATION
The development of the ATC selection battery: A new procedure to make maximum use of available information when correcting correlations for restriction in range due to selection
[AD-A066132] N80-10788

STRESS (PHYSIOLOGY)
Responses of domestic fowl to repeated +Gz acceleration
A80-11633
Plasma volume changes in fit men and women during a humid heat stress before and after an acclimation
N80-10781
Effect of a rapid 4 percent carboxyhemoglobin saturation increase on maximal treadmill exercise
[PB-296627/3] N80-10786
Hypothermia induced by chlorpromazine or L-tryptophan effects on treadmill performance in the heat
[AD-A069849] N80-11764
Altitude acclimatization. Citations from the International Aerospace Abstracts data base
[NTIS/PS-79/0857/7] N80-11770

STRESS (PSYCHOLOGY)
Dietary supplements used to prevent some changes in the human body in the presence of nervous and emotional stress
N80-10758
Life stress, self-preoccupation, and social supports
[AD-A068624] N80-10789

SUBMERGING
Use of short-arm centrifuge to prevent deconditioning when immersed in water (according to H-reflex)
N80-10772

SUITS
Evaluation of heat flow components from heater to skin in an electric thermal suit
N80-11000

SULFATES
Antiquity and evolutionary status of bacterial sulfate reduction - Sulfur isotope evidence
A80-12227

SULFUR ISOTOPES
Antiquity and evolutionary status of bacterial sulfate reduction - Sulfur isotope evidence
A80-12227

SYSTOLE
Systolic time intervals and other cardiovascular changes following leg elevation
A80-11635

T

T-2 AIRCRAFT
Behavioral scientific study on T-2 flight simulator. II - Comparison of pilot workload between aircraft and simulator
A80-11522

TARGET ACQUISITION
Visual search performance in simulated remotely piloted vehicle utilization as a function of auxiliary task loading on the observer
[AD-A072402] N80-10804

TASK COMPLEXITY
Simulator fidelity in the learning of complex flight tasks
A80-10774

TAXONOMY
Two important directions of development of Soviet biometry
N80-10997

TELECOMMUNICATION
Telecommunications in medicine. A bibliography with abstracts
[NTIS/PS-79/0786/8] N80-11769

TEMPERATURE EFFECTS
Reactions of rats to overheating following prolonged hypokinesia
N80-10761
The 5-thio-d-glucose thermoregulatory effects in mice at various temperatures
[AD-A069511] N80-11757

TEST STANDS
A portable stand for assessing the dynamics of a working individual's functional state --- based on a microprocessor
N80-10750

THERMAL CONDUCTIVITY
Thermal conduction effects in human skin. Phase 2: Experimental validation and application of data in selection of materials
[AD-A068480] N80-10783

THERMOREGULATION
Reactions of rats to overheating following prolonged hypokinesia
N80-10761
The 5-thio-d-glucose thermoregulatory effects in mice at various temperatures
[AD-A069511] N80-11757

THRESHOLDS
Interstimulus interval as it affects temporary threshold shift in serial presentations of loud tones
[AD-A072006] N80-11762

TISSUES (BIOLOGY)
Factors affecting the regulation of biological oxidation processes in tissue specimens
A80-10330
Effect of space flight conditions on deoxyribonucleoprotein and nucleic acid content of rat tissues
N80-10760

TOXIC HAZARDS
Toxic effects of chemicals in the altered gas environment of pressurized chambers
N80-10775

TOXICITY
National library of medicine toxicology data base management system
[ORNL/CSD/TM-80] N80-10785

TOXICOLOGY
National library of medicine toxicology data base management system
[ORNL/CSD/TM-80] N80-10785
Analysis of airborne particulates and human urine by inductively coupled plasma-atomic emission spectrometry
[PB-297775/9] N80-10787

TRACE ELEMENTS
Analysis of airborne particulates and human urine by inductively coupled plasma-atomic emission spectrometry
[PB-297775/9] N80-10787

TRACKING (POSITION)
Head aiming/tracking accuracy in a helicopter environment
[AD-A071359] N80-11788

U

U.S.S.R.
Two important directions of development of Soviet biometry
N80-10997

UH-1 HELICOPTER
Rotary wing proficiency-based Aviator Selection System (PASS)
[AD-A069838] N80-11774

ULTRAVIOLET ABSORPTION
Biochemical chromophores and the interstellar extinction at ultraviolet wavelengths
A80-12270

URINE
Analysis of airborne particulates and human urine by inductively coupled plasma-atomic emission spectrometry
[PB-297775/9] N80-10787

V

VECTORCARDIOGRAPHY
The normal values of spatial velocity in the second part of QRS /A cooperative study of 229 healthy individuals/
A80-10422

VERTICAL TAKEOFF AIRCRAFT
Performance, physiological, and oculometer evaluation of VTOL landing displays
[NASA-CR-3171] N80-11771

VIKING LANDER SPACECRAFT
The Viking mission and the search for life on Mars
A80-10738

VISION
Spatio-temporal intergration in the visual system
[AD-A069558] N80-11780

VISORS
Integrated helmet-mounted sight/display program: Coating technology
[AD-A072060] N80-11782

VISUAL DISCRIMINATION
Human vigilance investigation analysis of the pattern array test (further data analysis)
[UCRL-13891-3] N80-10798
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059] N80-11783
Helmet-mounted sight/display program: Cessna 310 flight test
[AD-A072058] N80-11786

VISUAL OBSERVATION
Visual search performance in simulated remotely piloted vehicle utilization as a function of auxiliary task loading on the observer
[AD-A072402] N80-10804

VISUAL PERCEPTION
Microsecond sensitivity of the human visual system to irregular flicker
A80-11371
Some influences of vision on susceptibility to motion sickness
A80-11630
Use of the pupil to study the scotopic and chromatic mechanisms of vision in humans
N80-10777
Remote operator performance comparing mono and stereo TV displays: The effects of visibility, learning and task factors
[AD-A068201] N80-10793
Evoked cortical potentials and information processing
[AD-A070789] N80-10794
Spatio-temporal intergration in the visual system
[AD-A069558] N80-11780
Helmet-mounted displays: A computer-assisted analysis of day-night visual requirements
[AD-A072061] N80-11784
The role of the upper field of view in selected HMS/D visual tasks
[AD-A072064] N80-11785

VISUAL TASKS
Effects of pseudoephedrine and triprolidine on visual performance
A80-11637

VOMITING
Effect of transdermally administered scopolamine in preventing motion sickness
A80-11628

W

WASTE WATER
Preprototype vapor compression distillation subsystem --- recovering potable water from wastewater
[NASA-CR-160332] N80-10801

WATER POLLUTION
Bichromate oxidability as a criterion of quantitative levels of organic impurities in reclaimed water
N80-10766

WATER RECLAMATION
Extended duration orbiter study: CO2 removal and water recovery
[NASA-CR-160317] N80-10800
Preprototype vapor compression distillation subsystem --- recovering potable water from wastewater
[NASA-CR-160332] N80-10801

WATER TREATMENT
Preprototype vapor compression distillation subsystem --- recovering potable water from wastewater
[NASA-CR-160332] N80-10801

WEIGHTLESSNESS
The effect of dynamic factors of space flight on animal organisms
[NASA-TM-75692] N80-10745
Current conceptions on the genesis of vestibulovegetative disorders in weightlessness
N80-10753
Use of short-arm centrifuge to prevent deconditioning when immersed in water (according to H-reflex)
N80-10772

WORKLOADS (PSYCHOPHYSIOLOGY)
Behavioral measures of aircrew mental workload
A80-10344
Physiological measures of aircrew mental workload
A80-10345
Work-science research on maximum work capacity and recovery time for informational-mental work based on the channel- and man-machine model along with superposed stress, using work in a hot environment as an example
A80-10650
Behavioral scientific study on T-2 flight simulator. II - Comparison of pilot workload between aircraft and simulator
A80-11522
Performance, physiological, and oculometer evaluation of VTOL landing displays
[NASA-CR-3171] N80-11771

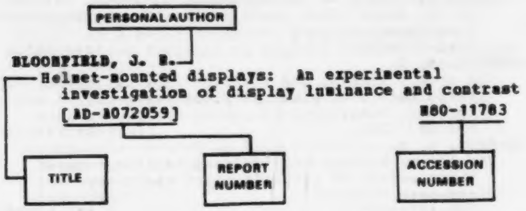
X

X RAY ANALYSIS
Roentgenological examination of the human heart after 100-day hypokinesia
N80-10759

blank page

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ABIDIN, B. I.
The combined effect of carbon monoxide and hypokinesia
N80-10763

ADAMS, E. M.
Carbon dioxide contributions in respiratory control
N80-11760

ALEXANDER, M.
Revised height/weight sizing programs for men's protective flight garments
[AD-A070732] N80-10803
Height/weight sizing programs for womens protective garments
[AD-A072376] N80-11781

ALGANOR, M.
Spatio-temporal intergration in the visual system
[AD-A069558] N80-11780

ANDREASSI, J. L.
Evoked cortical potentials and information processing
[AD-A070789] N80-10794

ARAMAKI, S.
Behavioral scientific study on T-2 flight simulator. II - Comparison of pilot workload between aircraft and simulator
A80-11522

AUSBURN, F. B.
Cognitive styles: A review of the literature
[AD-A069435] N80-11772

AUSBURN, L. J.
Cognitive styles: A review of the literature
[AD-A069435] N80-11772

AVITALL, B.
Strength-interval curves of isolated rat papillary muscle during hypoxia and reoxygenation - Effect of lidocaine
A80-10421

B

BACA, S.
A memory retrieval aid for hypothesis generation
[AD-A072657] N80-10795

BACK, K. T.
Cognitive styles: A review of the literature
[AD-A069435] N80-11772

BAKER, V. R.
South American river morphology and hydrology
N80-10574

BARSUKOVA, L. P.
Phosphoenolpyruvate synthesis and reactions of the respiratory chain of mitochondrias in the liver of animals during physiological adaptive responses
A80-10332

BATUEV, A. S.
Cortical mechanisms of integrative brain activity
A80-11876

BAYEVSKIY, R.
Health prognosis in flight discussed
N80-10995

BELKIN, V. I.
The combined effect of carbon monoxide and hypokinesia
N80-10763

BELLVILLE, J. W.
Modeling and parameter identification of the human respiratory system
A80-11378

BESPALOVA, L. A.
Ultrastructural changes in canine hepatocytes during continuous chronic exposure to low doses of gamma radiation
N80-10768

BLAIR, N. E.
The radioracemization of isovaline - Cosmochemical implications
A80-13018

BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059] N80-11783

BONNER, W. A.
The radioracemization of isovaline - Cosmochemical implications
A80-13018

BOONE, J. O.
The development of the ATC selection battery: A new procedure to make maximum use of available information when correcting correlations for restriction in range due to selection
[AD-A066132] N80-10788

BOTT, R. A.
A study of complex learning theory and methodologies
[AD-A068323] N80-10792

BROVKO, O.
Modeling and parameter identification of the human respiratory system
A80-11378
The extended Kalman filter as pulmonary blood flow estimator
N80-10779

BRYANTSEV, I. A.
Investigation of alveoloarterial difference for oxygen and carbon dioxide when breathing high-density gas mixtures
N80-10774

BUECKER, H.
Discrete multivariate analysis on radiobiological results from the biostack 3 Bacillus subtilis experiment
N80-11759
Summary of radiobiological findings: From spaceflight to ground-based studies
N80-11768

BULL, R. F.
Rotary wing proficiency-based Aviator Selection System (PASS)
[AD-A069838] N80-11774

BURAVKOVA, I. B.
Effect of hypoxia on ATPase activity of the brain
N80-10776

BURTON, R. R.
Responses of domestic fowl to repeated +Gz acceleration
A80-11633

BUTLER, F. A.
Cognitive styles: A review of the literature
[AD-A069435] N80-11772

BYCHKOV, V. P.
Dietary supplements used to prevent some changes in the human body in the presence of nervous and emotional stress
N80-10758

C

CAMPBELL, S. E.
Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota
A80-12230

CARLETON, R. A.
Torso mounted electrocardiographic electrodes for routine clinical electrocardiography
A80-10423

CARLSON, E. R.
Student pilots referred to the neuropsychiatry branch, USAFSAM 1968-78 Implications for selection
A80-11640

CHERNYAKOV, I. N.
Course of altitude caisson disease in dogs exposed to accelerations
N80-10773

CHIANTA, M. A.
Thermal conduction effects in human skin. Phase 2: Experimental validation and application of data in selection of materials
[AD-A068480] N80-10783

CHORAO DE AGUIAR, A. J.
The normal values of spatial velocity in the second part of QRS /A cooperative study of 229 healthy individuals/
A80-10422

CILEY, C. D., JR.
Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 2: Assessment of ARTEP and ATM training objectives and requirements for maintaining operational readiness
[AD-A069224] N80-11776
Development of unit training and evaluation techniques for combat-ready helicopter pilots. Task 1: Development of an instruction program for individual and unit training with combat-ready pilots
[AD-A069242] N80-11777

CINGOLANI, H. E.
Relationship between calcium and hydrogen ions in heart muscle
A80-10424

COHEN, B. J.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059] N80-11783
Helmet-mounted displays: A computer-assisted analysis of day-night visual requirements
[AD-A072061] N80-11784
The role of the upper field of view in selected HMS/D visual tasks
[AD-A072064] N80-11785

COLE, R. E.
Remote operator performance comparing mono and stereo TV displays: The effects of visibility, learning and task factors
[AD-A068201] N80-10793

D

DEAL, E. C., JR.
Cold air inhalation, esophageal temperature lung function in exercising humans
[AD-A069510] N80-11765

DEMPSEY, J. A.
Pulmonary adaptation to high altitude
[AD-A068317] N80-10784

DIAMOND, A. L.
Microsecond sensitivity of the human visual system to irregular flicker
A80-11371

DIAMOND, D.
Torso mounted electrocardiographic electrodes for routine clinical electrocardiography
A80-10423

DIANOV, A. G.
Investigation of alveoloarterial difference for oxygen and carbon dioxide when breathing high-density gas mixtures
N80-10774

DOTSENKO, M. A.
Effect of hypoxia on fluid-electrolyte metabolism and renal function in man as related to different degrees of motor activity
N80-10754

DRANCK, P. E.
Early diagnosis of decompression sickness. Changes in the blood found shortly after decompression. Experiments on rats
[MBL-1978-7] N80-11758

DREYFUS, H. L.
The scope, limits, and training implications of three models of aircraft pilot emergency response behavior
[AD-A071320] N80-11773

DREYFUS, S. E.
The scope, limits, and training implications of three models of aircraft pilot emergency response behavior
[AD-A071320] N80-11773

DURNEY, C. H.
Numerical calculation of electromagnetic energy deposition for a realistic model of man
A80-10925

DYNNIK, V. V.
Oxidation of pyruvate in mitochondrias: Mathematical model - Regulation of the Kreb's cycle by adenine and pyridine nucleotides
A80-10329

E

ELLIS, G. S.
Extended duration orbiter study: CO2 removal and water recovery
[NASA-CR-160317] N80-10800
Preprototype vapor compression distillation subsystem
[NASA-CR-160332] N80-10801

ENG, W. G.
Survey on eye comfort in aircraft. II - Use of ophthalmic solutions
A80-11638

ENGELKEN, E. J.
A modeling approach to the assessment of smooth pursuit eye movement
A80-11627

ERIKSSEN, J.
Resting heart rate in apparently healthy middle-aged men
A80-11374

F

FACIUS, R.
Discrete multivariate analysis on radiobiological results from the biostack 3 Bacillus subtilis experiment
N80-11759
Summary of radiobiological findings: From spaceflight to ground-based studies
N80-11768

FAIRMAN, T. M.
Noise dosimeter measurements in the Air Force
A80-11636

FARLEY, W. W.
Spatio-temporal intergration in the visual system
[AD-A069558] N80-11780

FASSEL, V. A.
Analysis of airborne particulates and human urine by inductively coupled plasma-atomic emission spectrometry
[PB-297775/9] N80-10787

FERRARI, A.
Control of blood pressure by carotid sinus baroreceptors in human beings
A80-10522

FERRARI, R. C.
Control of blood pressure by carotid sinus baroreceptors in human beings
A80-10522

FINOGENOVA, N. I.
Investigation of alveoloarterial difference for oxygen and carbon dioxide when breathing high-density gas mixtures
N80-10774

FISHER, S.
A memory retrieval aid for hypothesis generation
[AD-A072657] N80-10795

FLORES, J. J.
The radioracemization of isovaline - Cosmochemical implications
A80-13018

FORSTER, H. V.
Effect of a rapid 4 percent carboxyhemoglobin saturation increase on maximal treadmill exercise

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 204)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in February 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, at the price $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 140 reports, articles and other documents announced during February 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche (1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $65.00 domestic; $130.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

EXTENDED DURATION ORBITER STUDY: CO2 REMOVAL AND WATER RECOVERY Final Report
R. D. Marshall, G. S. Ellis, F. H. Schubert, and R. A. Wynveen
May 1979 91 p refs
(Contract NAS9-15218)
(NASA-CR-160317; LSI-ER-319-24) Avail: NTIS
HC A05/MF A01 CSCL 06K

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A80-13186 **Innovations in transportation engineering and human factors (Verkehrstechnische Innovationen und menschliches Verhalten).** K. Steininger (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugmedizin, Bonn, West Germany). *DFVLR-Nachrichten,* Nov. 1979, p. 35-39. In German.

The paper investigates the question of whether technical innovations always result in social benefits. Attention is given to the conflict between technical innovation and human failure. Innovations considered include semiconductor technology which influences communications, automatic control technology and microprocessor technology. Discussion covers the demands of modern transportation technology on man, human factors in traffic, and concepts for solving of the conflict. M.E.P.

A80-13216 **Electromagnetic absorption in multilayered cylindrical models of man.** H. Massoudi, C. H. Durney, P. W. Barber, and M. F. Iskander (Utah, University, Salt Lake City, Utah). *IEEE Transactions on Microwave Theory and Techniques,* vol. MTT-27, Oct. 1979, p. 825-830. 11 refs. Contract No. F41609-76-C-0025.

The absorption characteristics of multilayered cylindrical models of man irradiated by a normally incident electromagnetic plane wave are investigated. Numerical calculations for a specific skin-fat-muscle cylindrical model of man predict a layering resonance at 1.2 GHz with an average specific absorption rate (SAR) about double that calculated for the corresponding homogeneous model. The layering resonance frequency is found to be the same for incident waves polarized parallel and perpendicular to the cylindrical axis. The effects of layers on the whole-body absorption by man are determined by averaging the effects obtained for many combinations of skin and fat thicknesses. Absorption effects due to clothing are also investigated. (Author)

A80-13243 **General characteristics of the rheological properties of the soft tissues of the human body using local cycling loading measurements and a simple phenomenological model of these properties (Obshchaia kharakteristika reologicheskikh svoistv miagkikh tkanei cheloveka po dannym izmerenii metodom lokal'nogo tsiklicheskogo nagruzheniia i prosteishaia fenomenologicheskaia model etikh svoistv).** E. V. Belaia (Akademiia Meditsinskikh Nauk SSSR, Moscow, USSR). *(Vsesoiuznaia Konferentsiia po Problemam Biomekhaniki, 2nd, Riga, Latvian SSR, Apr. 1979.) Mekhanika Kompozitnykh Materialov,* July-Aug. 1979, p. 737-741. In Russian.

A80-13263 **T-waves in the exercise ECG - Their location and occurrence.** R. A. Wolthuis (Medtronic, Inc., Minneapolis, Minn.), N. Keiser, J. R. Fischer, Jr. (USAF, School of Aerospace Medicine, Brooks AFB, Tex.), and A. Hopkirk. *IEEE Transactions on Biomedical Engineering,* vol. BME-26, Nov. 1979, p. 639-643. 12 refs.

The automated location of T-wave fiducial points in single lead exercise ECGs is facilitated by using R-wave peak to T-wave maximum and R-wave peak to T-wave ending intervals predicted from heart rate. Predictive equations for these intervals were developed; algorithms were subsequently designed and tested on 8380 averaged ECG beats from 146 patients. Of 6775 ECG beats with monophasic T-waves, 98 percent of the T-wave maximum and 96 percent of the T-wave ending fiducial points were correctly identified by these algorithms. The predictive equations and associated algorithms are discussed. (Author)

A80-13272 **Ergonomical studies about the superposition of control activity and mechanical vibration (Ergonomische Untersuchungen zur Superposition von Regeltätigkeiten und mechanischen Schwingungen).** R. Helbig and H. Luczak (Darmstadt, Technische Hochschule, Darmstadt, West Germany). *European Journal of Applied Physiology,* vol. 42, no. 2, 1979, p. 81-104. 59 refs. In German.

The effects of combined stresses due to control activity and vertical mechanical vibration on man are analyzed. The processes in the human being at those superposed stresses are shown in a deterministic way, starting from morphological and physiological facts that lead to a division of the organismic data processing in the fields of information reception, central information processing and output. Factorial laboratory experiments with combined stresses consisting of an ideal-typical compensatory-tracking task and mechanical vibration are discussed. It is determined that influences of vibration in regions of information reception and information output were found as well as thresholds for the performance reducing effects of mechanical vibrations. C.F.W.

A80-13273 **Effects and post-effects of two-hour exhausting exercise on composition and gas transport functions of blood.** D. Böning, W. Skipka, P. Heedt, W. Jenker, and U. Tibes (Köln, Deutsche Sporthochschule, Cologne, West Germany). *European Journal of Applied Physiology,* vol. 42, no. 2, 1979, p. 117-123. 22 refs.

A80-13274 **Seasonal variation in work performance and heart rate response to exercise - A study of 1,835 middle-aged men.** J. Erikssen (Rikshospitalet, Oslo, Norway) and K. Rodahl (Norwegian College of Physical Education, Oslo, Norway). *European Journal of Applied Physiology,* vol. 42, no. 2, 1979, p. 133-140. 8 refs.

A80-13322 **A procedure for electronically monitoring animal response parameters using the rotating wheel.** J. C. Spurgeon, R. A. Filipczak, R. E. Feher, and S. J. Sternik (FAA, National Aviation Facilities Experimental Center, Atlantic City, N.J.). *Journal of Combustion Toxicology,* vol. 6, Aug. 1979, p. 198-207. 10 refs.

A convenient method of quantitatively comparing aircraft interior materials according to their relative potential toxicities is to place a small animal (rat) in a rotating wheel and measure the time from the onset of toxic gas to the animal's incapacitation. Because of the loss of visibility due to smoke, electronic monitoring of the rotating wheel is necessary. Tests were performed at the FAA's National Aviation Facilities Experimental Center using the thermal decomposition products first of a wool seat fabric, and then of a coated fabric (polyvinylchloride on cloth). The exact specifications of the rotating wheel assembly developed at the FAA's Civil Aeromedical Institute, as well as explicit descriptions of the behavior of the animals during the tests, supplemented by graphs, are presented. J.B.

A80-13372 # **Relationship between recovery and hypothermia induced by centrifugation in rats.** H. Fujiwara, E. Kamei, and I. Saito (Japan Air Self Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports*, vol. 20, June 1979, p. 1-20. 26 refs. In Japanese, with abstract in English.

The paper presents the relationship between recovery and hypothermia induced in rates by centrifugation. A total of 80 SLC-Sprague Dawley (SD) strain young male rats were exposed to centrifugation of 2G in the backward prone position G(-GX) for 15 to 60 min/day, and their core temperatures were measured before, after, and 30 to 90 min after the centrifuge exposure. It was found that (1) the core temperatures was about 38.0 C in the prerun control measurement, and it fell to temperatures in the 35.4 to 37.0 C range after daily 15 min exposure to centrifugation for periods from 3 to 10 weeks, (2) the core temperatures decreased more than higher initial core temperatures, and (3) the core temperatures recovered to almost normal levels within 30 min after centrifugation. A.T.

A80-13373 # **Effects of long-term repetitive exposure to centrifugation of 2G on developing rat.** E. Kamei, H. Fujiwara, and I. Saito (Japan Air Self Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports*, vol. 20, June 1979, p. 21-47. 15 refs. In Japanese, with abstract in English.

Investigation of the effect of centrifugation on body weight and length, tail length, bone development by biometry, food and water intake, and daily amount of feces of rats is presented. 80 male rats were exposed to centrifugal forces of 2G for daily periods of 15 min expanded weekly by 5 min for 7 to 70 days. It was found that (1) the body weight was consistently lower than that of the controls, and that the centrifuged rats showed on average a smaller body and tail length compared to each control group, (2) compared to the control group, the length of the femur and tibia were decreased and the midshaft diameter of both bones were decreased by centrifugation, (3) daily consumption of food and water in the rats exposed for 56 and 70 days decreased compared to their respective control groups, but in the 42 day exposure group the food consumption was equal or slightly less than that of the control group, and (4) the mean amount of feces in the rats exposed for 56, 70, and 42 days were almost similar to respective control groups. A.T.

A80-13374 # **Effects of cold exposure on circadian rhythm of body temperature in rats and rabbits.** H. Osada, E. Sakaguchi, H. Maru, R. Yurugi (Japan Air Self Defense Force, Aeromedical Laboratory, Tachikawa, Tokyo, Japan). *Japan Air Self Defence Force, Aeromedical Laboratory, Reports*, vol. 20, June 1979, p. 49-58. 7 refs. In Japanese, with abstract in English.

A study of the effects of cold exposure on the circadian rhythm of the body temperature in rats and rabbits is presented. 5 rabbits were exposed outdoors during winter for 48 hr, and 5 rats were placed in a cold room (5 plus or minus 1 C) for 2 months. Body temperatures of the animals were measured every one or two hours, and the circadian rhythm of the body temperature was analyzed by the cosinor method in which the mean value, amplitude, and the phase shift of the body temperature alteration during 24 hr were mathematically expressed. Both the cold and warm acclimatized rats showed approximately the same pattern in the circadian diagram; acutely cold exposed rabbits exhibited reduced amplitude in cosinor diagram in rectal, subcutaneous and skin temperature as compared with the warm acclimatized rabbits and a reversed phase with the environmental air temperature and human circadian pattern. A.T.

A80-13451 **Biological investigations carried out in balloons.** H. Planel, J. P. Soleilhavoup, and G. Gasset (Toulouse III, Université, Toulouse, France). In: Scientific ballooning; Proceedings of the Symposium on the Scientific Use of Balloons and Related Technical Problems, Innsbruck, Austria, May 29-June 10, 1978. Oxford, Pergamon Press, Ltd., 1979, p. 187-194. 12 refs.

The French program of balloon-borne experiments on the effects of cosmic rays on living organisms is reviewed. Past experiments on paramecium and plant growth rates following specimen recovery and the effects of heavy ions, which would be encountered in long-term space flights, on yeast mutations and the nervous system of rats, which were conducted using a thermally-regulated container in a balloon flying at 120,000 feet for six to nine hours, are indicated. Recent experiments using a remote-controlled apparatus to study the immediate response of paramecium growth kinetics to cosmic radiation are presented, noting the observed increased cell growth rates upon cosmic ray exposure, and studies of cosmic ray effects on drosophila mutations and genetic recombination are reported. Future experiments planned for a 20-h transmediterranean balloon flight are presented which are intended to study cosmic ray effects on Artemia salina and tobacco seed development, and drosophila genetic recombination rates. A.L.W.

A80-13476 # **Investigation of thermoregulatory mechanisms (Issledovanie mekhanizmov termoreguliatsii).** Iu. N. Chusov (Vladimirskii Gosudarstvennyi Pedagogicheskii Institut, Vladimir, USSR). *Fiziologiia Cheloveka*, vol. 5, Sept.-Oct. 1979, p. 827-833. 37 refs. In Russian.

The paper investigates the effect of cooling in ice water on the behavior of certain psychophysiological processes in man. The study establishes the dependence of the trend and value of the arising changes on total heat loss, as well as on the body resistivity and the regime of voluntary muscular activity during the cooling period. A critical value of cooling load is determined which significantly reduces the level of the processes considered. S.D.

A80-13477 # **Water-electrolyte metabolism and the function of human kidneys at mountain altitudes (Vodno-solevoi obmen i funktsiia pochek cheloveka v usloviiakh vysokogor'ia).** V. I. Korol'kov, M. A. Dotsenko, A. I. Grigor'ev, and G. I. Kozyrevskaia. *Fiziologiia Cheloveka*, vol. 5, Sept.-Oct. 1979, p. 849-854. 26 refs. In Russian.

A80-13505 **Difference between end-tidal and arterial P/CO2/ in exercise.** N. L. Jones, D. G. Robertson, and J. W. Kane (McMaster University, Hamilton, Ontario, Canada). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 47, Nov. 1979, p. 954-960. 14 refs.

A80-13506 * **Plasma volume during stress in man - Osmolality and red cell volume.** J. E. Greenleaf, V. A. Convertino, and G. R. Mangseth (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 47, Nov. 1979, p. 1031-1038. 30 refs.

The purpose was (1) to test the hypothesis that in man there is a range of plasma osmolality within which the red cell volume (RCV) and mean corpuscular volume (MCV) remain essentially constant and (2) to determine the upper limit of this range. During a variety of stresses - submaximal and maximal exercise, heat and altitude exposure, +Gz acceleration, and tilting - changes in plasma osmolality between -1 and +13 mosmol/kg resulted in essentially no change in the regression of percent change in plasma volume (PV) calculated from a change in hematocrit (Hct) on that calculated from a change in Hct + hemoglobin (Hb), i.e., the RCV and MCV were constant.

Factors that do not influence RCV are the level of metabolism, heat exposure at rest, and short-term orthostasis (heat-to-foot acceleration). Factors that may influence RCV are exposure to high altitude and long-term orthostasis (head-up tilting). Factors that definitely influence RCV are prior dehydration and extended periods of stress. Thus, either the Hct or the Hct + Hb equations can be used to calculate percent changes in PV under short-term periods of stress when the change in plasma osmolality is less than 13 mosmol/kg. (Author)

A80-13507 **Thermogenic control during exercise in a cold environment.** S.-I. Hong (John B. Pierce Foundation Laboratory, New Haven, Conn.) and E. R. Nadel (Yale University, New Haven, Conn.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 47, Nov. 1979, p. 1084-1089. 15 refs. Grant No. NIH-ES-00354.

A80-13526 # **Foundation of hyperbaric physiology (Osnovy giperbaricheskoi fiziologii).** G. L. Zal'tsman, G. A. Kuchuk, and A. G. Gurgenidze. Leningrad, Izdatel'stvo Meditsina, 1979. 320 p. 344 refs. In Russian.

The book outlines achievements in human and animal physiology under conditions of elevated pressures of gaseous and aqueous environments. Two problem areas are discussed in detail: the physiological characteristics of hyperbaric habitat, and the functional state of the organism in different hyperbaric environments. Attention is given to the effect, on man and animals, of hyperbaric oxygen, air, helium-oxygen and argon-oxygen environments during short- and long-term exposures under low, medium, high and superhigh pressures. The observed shifts are examined on the organism, organ, and cellular levels. Practical application of respiratory gas mixtures under pressure is also discussed. S.D.

A80-13548 * **Amino acids in the Yamato carbonaceous chrondrite from Antarctica.** A. Shimoyama, C. Ponnamperuma (Maryland, University, College Park, Md.), and K. Yanai (National Institute of Polar Research, Tokyo, Japan). *Nature*, vol. 282, Nov. 22, 1979, p. 394-396. 16 refs. Grant No. NGR-21-002-317.

Evidence for the presence of amino acids of extraterrestrial origin in the Antarctic Yamato carbonaceous chrondrite is presented. Hydrolyzed and nonhydrolyzed water-extracted amino acid samples from exterior, middle and interior portions of the meteorite were analyzed by an amino acid analyzer and by gas chromatography of N-TFA-isopropyl amino acid derivatives. Nine protein and six nonprotein amino acids were detected in the meteorite at abundances between 34 and less than one nmole/g, with equal amounts in interior and exterior portions. Nearly equal abundances of the D and L enantiomers of alanine, aspartic acid and glutamic acid were found, indicating the abiotic, therefore extraterrestrial, origin of the amino acids. The Antarctic environment and the uniformity of protein amino acid abundances are discussed as evidence against the racemization of terrestrially acquired amino acids, and similarities between Yamato amino acid compositions and the amino acid compositions of the Murchison and Murray type II carbonaceous chrondrites are indicated. A.L.W.

A80-13549 * **Quantification of monocarboxylic acids in the Murchison carbonaceous meteorite.** J. G. Lawless (NASA, Ames Research Center, Extraterrestrial Research Div., Moffett Field, Calif.) and G. U. Yuen (Arizona State University, Tempe, Ariz.). *Nature*, vol. 282, Nov. 22, 1979, p. 396-398. 30 refs.

The abundances of some of the straight- and branched-chain isomers of the monocarboxylic acids found in the Murchison carbonaceous chondrite are determined. Monocarboxylic acids extracted from a crushed sample of Murchison interior were quantified by means of gas chromatography and mass spectroscopy after a spiking solution of deuterated analogues of 11 carboxylic acids had been added. Monocarboxylic acid abundances are found to range between 1.83 and 0.01 micromole/g, which is significantly higher than Murchison amino acid concentrations, and to decrease with increasing carbon number for both branched and unbranched molecules. The results are interpreted to support the abiotic extraterrestrial synthesis of monocarboxylic acids. Possible mechanisms leading to the equal synthesis of branched and each unbranched carboxylic acid with the same carbon number are considered, noting that the Fischer-Tropsch Type mechanism by itself is incapable of accounting for the observed distributions. A.L.W.

A80-13590 **Microwaves - Effect on thermoregulatory behavior in rats.** S. Stern, L. Margolin, B. Weiss, S.-T. Lu, and S. M. Michaelson (Rochester, University, Rochester, N.Y.). *Science*, vol. 206, Dec. 7, 1979, p. 1198-1201. 23 refs. Research supported by the U.S. Department of Energy.

Rats, with their fur clipped, pressed a lever to turn on an infrared lamp while in a cold chamber. When they were exposed to continuous-wave microwaves at 2450 MHz for 15-minute periods, the rate at which they turned on the infrared lamp decreased as a function of the microwave power density, which range between 5 and 20 mW/sq cm. This result indicates that behaviorally significant levels of heating may occur at an exposure duration and intensities that do not produce measurable changes in many other behavioral measures or in colonic temperature. Further study of how microwaves affect thermoregulatory behavior may help us understand such phenomena as the reported 'nonthermal' behavioral effects of microwaves. (Author)

A80-13591 **Eye movements in paralyzed cats induced by drugs and sympathetic stimulation.** R. A. Linsenmeier and B. G. Hertz (Northwestern University, Evanston, Ill.). *Vision Research*, vol. 19, no. 11, 1979, p. 1249-1252. 9 refs. Grants No. NIH-5-R01-EY-00206; No. NIH-5-F32B-EY-05015; No. NIH-5-F32-EY-05193.

Cat eye movements were measured in animals anesthetized with urethane and paralyzed with high doses of gallamine. The eyes were relatively stable under these conditions, but when bicuculline, strychnine or methoxamine (Vasoxyl) was then given intraveneously, or when the animals were made hypoxic by respiring them with 5% O2, displacements in eye position of 0.5-2.75 deg were observed. A cervical sympathectomy reduced the eye movements caused by bicuculline and strychnine, but did not prevent the movements caused by any of the agents tested. Electrical stimulation of the cervical sympathetic nerve caused eye movements whose maximum amplitude was similar to those caused by drugs. (Author)

A80-13859 **Calculation of the surface on which the corneal flash is located with application to the development of a system for recording eye movement.** V. I. Kushpil' and V. P. Smirnov. *(Optiko-Mekhanicheskaia Promyshlennost', vol. 46, Mar. 1979, p. 39-41.) Soviet Journal of Optical Technology*, vol. 46, Mar. 1979, p. 160-162. 6 refs. Translation.

An expression is given for calculating the surface on which the corneal flash is located for arbitrary placement of the light source. A scheme for restricting the light beams when reproducing the corneal flash through an optical system and an expression for calculating the location and size of the entrance pupil of this system are discussed. (Author)

A80-13864 **Humans deprived of normal binocular vision have binocular interactions tuned to size and orientation.** D. M. Levi, R. S. Harwerth, and E. L. Smith, III (Houston, University, Houston, Tex.). *Science*, vol. 206, Nov. 16, 1979, p. 852-854. 20 refs. Grants No. NIH-R01-EY-01728; No. NIH-R01-EY-01139; No. NIH-K07-EY-000052.

The nature and extent of binocular interactions in humans deprived of normal visual experience by strabismus, amblyopia or both is investigated. Subjects viewed two matched cathode-ray-tube displays in a mirror stereoscope, and were asked to discriminate a test grating presented to one eye from a blank field or grating background presented to the other eye. It is found that a background grating at a spatial frequency greater than the threshold decreased the contrast sensitivity of the other eye to test gratings similar in frequency for observers with normal binocular vision and with abnormal binocular vision, although the viewers with abnormal binocular vision failed to exhibit binocular summation at frequencies at or below the threshold. It is suggested that the normal excitatory connections between the two eyes are disrupted by the lack of binocular visual experience, while inhibitory interactions are not affected. A.L.W.

A80-13999 **The importance of pattern information for the resolution of depth-ambiguous apparent motion.** D. G. White, P. Wenderoth, and I. S. Curthoys (Sydney University, Sydney, Australia). *Perception and Psychophysics*, vol. 26, no. 5, Nov. 1979, p. 355-362. 15 refs. Australian Research Grants Committee Grant No. A74/15177.

A single apparent motion display can result in the perception of a rigid three-dimensional motion or a plastic, two-dimensional motion. Previous studies have found that the principal determinant of the perceptual outcome is the temporal properties of the apparent motion stimulus. Here it is shown that the form properties of the stimulus are another determinant and that, in some situations, they may become a more powerful determinant than the temporal properties. (Author)

A80-14000 * **Choice reaction time to movement of eccentric visual targets during concurrent rotary acceleration.** J. A. Hamerman (San Jose State University, San Jose, Calif.). *Perception and Psychophysics*, vol. 26, no. 5, Nov. 1979, p. 369-373. 18 refs. Grant No. NGL-05-046-002.

This study investigates the influence of concurrent rotary acceleration on choice reaction time (RT) to a small, accelerating visual cursor on a cathode-ray tube. Subjects sat in an enclosed rotating device at the center of rotation and observed a 3-mm dot accelerating at different rates across a cathode-ray tube. The dot was viewed at various eccentricities under conditions of visual stimulation alone and with concurrent rotary acceleration. Subjects responded to both vertical and horizontal dot movements. There was a significant inverse relationship between choice RT and level of dot acceleration (p less than .001), and a significant direct relationship between choice RT and eccentricity (p less than .001). There was no significant difference between choice RT to vertical or horizontal dot motion (p greater than .25), and choice RT was not significantly affected by concurrent rotary acceleration (p greater than .10). The results are discussed in terms of the effects of vestibular stimulation on choice RT to visual motion. (Author)

A80-14097 # **Radiation and DNA (Radiatsiia i DNK).** N. I. Riabchenko. Moscow, Atomizdat, 1979. 192 p. 615 refs. In Russian.

Consideration is given to the effects of ionizing radiation on the structure of DNA. Physical and chemical methods of determining radiation damage to the primary (polynucleotide chain and nitrogenous base) and secondary (helical) structure of DNA are discussed, and the effects of ionizing radiation on deoxyribonucleoprotein complexes are considered. The radiolysis of DNA in vitro and in bacterial and mammalian cells is examined and cellular mechanisms for the repair of radiation-damaged DNA are considered, taking into account single-strand and double-strand breaks, gamma-radiation damage and deoxyribonucleoprotein-membrane complex damage. Postradiation DNA degradation in bacteria and lymphatic cells is also discussed. A.L.W.

A80-14098 # **Memory and adaptation (Pamiat' i adaptatsiia).** R. Iu. Il'iuchenok. Novosibirsk, Izdatel'stvo Nauka, 1979. 192 p. 357 refs. In Russian.

The monograph analyzes physiological mechanisms on adaptation as functions of the efficiency of the activity of central regulatory systems and memory. Analysis of data on human adaptation to various climatic-geographic conditions revealed three adaptive stages based on different physiological mechanisms. Particular attention is given to memory processes and the functional asymmetry of the brain during the various adaptive stages. S.D.

A80-14099 # **Visual information and vision of robots (Vizual'naia informatsiia i zrenie robotov).** G. P. Katys. Moscow, Izdatel'stvo Energiia, 1979. 176 p. 111 refs. In Russian.

The book discusses information systems of robots, visual information processing in the visual organs of animals and robots, as well as systems of spatial filtration, functional transformation and pattern recognition. The discussion demonstrates the capabilities of visual information processing systems in enhancing the independence of robots and extending their potential and field of applications. S.D.

A80-14165 # **Prediction of the physical work capacity of persons at mountain altitudes (Prognozirovanie fizicheskoi rabotosposobnosti liudei v vysokogor'e).** A. L. Maksimov. *Voenno-Meditsinskii Zhurnal*, Sept. 1979, p. 47, 48. In Russian.

A80-14166 # **Characteristics of oculomotor responses and their sensory components during simulation of low-altitude flights (Kharakteristika glasodvigatel'nykh reaktsii i ikh sensornykh komponentov pri modelirovanii poletov na malykh vysotakh).** V. I. Babiiak. *Voenno-Meditsinskii Zhurnal*, Sept. 1979, p. 49-52. In Russian.

Simulated laboratory experiments were conducted on 25 healthy (normal vision) male subjects (18-22 yr) in order to study oculomotor responses and their sensory components as related to low-altitude flights. The objectives were (1) to study the dynamics of the angular velocity of the optokinetic nystagmus (OKN) slow component as a function of changes in the angular velocity of the optokinetic stimuli (OKSs); (2) to identify the OKN characteristics; and (3) to determine the quality of OKSs perception as a function of their angular displacement and OKN characteristics. It is found that the quality of perceiving OKSs is determined by the indices of the OKN slow component, which may be utilized for special professional selection of potential candidates. S.D.

A80-14257 # **Interhemispheric relationships of monoamine oxidase activity and norepinephrine content in the cortical centers of the skin and motor analyzers in the human brain (O mezhpolusharnykh sootnosheniiakh monoaminoksidaznoi aktivnosti i soderzhaniia noradrenalina v korkovykh tsentrakh kozhnogo i dvigatel'nogo analizatorov mozga cheloveka).** V. S. Kononenko (L'vovskii Meditsinskii Institut, Lvov, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 25, Sept.-Oct. 1979, p. 529-535. 21 refs. In Russian.

A80-14258 # **Effect of human exposure to a nitrogen-oxygen environment at 5-12 kgf/sq cm on certain indices of the higher nervous activity (Vliianie prebyvaniia cheloveka v azotnokislorodnoi srede pod davleniem 5-12 kgs/sq cm na nakotorye pokazateli vysshei nervnoi deiatel'nosti).** S. A. Guliar, E. V. Moiseenko, S. S. Sirota, V. A. Grinevich, and V. K. Skudin (Akademiia Nauk Ukrainskoi SSR, Institut Fiziologii, Kiev, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 25, Sept.-Oct. 1979, p. 576-584. 28 refs. In Russian.

A80-14259 # **Current problems of hypothermy (Sovremennye problemy gipotermii).** K. V. Ostashkov (Odesskii Gosudarstvennyi Universitet, Odessa, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 25, Sept.-Oct. 1979, p. 585-592. 78 refs. In Russian.

A historical review is presented of the various effects of hypothermy on warm-blooded animals and man. In the course of body cooling, each organ traverses an intrinsic state of 'biological null' where functional activity comes to an end. Attention is given to hypothermic (hibernation-induced) surgeries involving the anabiotic stage. Application of cold in biology and medicine aims at reducing metabolism and oxygen demand in all tissues, including the cerebral tissue. The use of hypothermic pharmacodynamic drugs in anesthesiology is also discussed. The problem of the most favorable reduced body temperature still remains unsolved. S.D.

A80-14260 # **Catecholamines and chemical thermoregulation during cold acclimation (Katekholaminy i khimicheskaia termoreguliatsiia pri akklimatsii k kholodu).** V. I. Sobolev (Donetskii Gosudarstvennyi Universitet, Donetsk, Ukrainian SSR). *Fiziologicheskii Zhurnal* (Kiev), vol. 25, Sept.-Oct. 1979, p. 593-603. 125 refs. In Russian.

Evidence is presented, indicating that catecholamines take part in the reactions of the body to the impact of cold of varying intensity and duration. It is shown that the thermogenic effect of norepinephrine after cold acclimation is mainly associated with the contracile activity of muscles. According to a specified mechanism for the action of catecholamines on chemical thermoregulation, cold stimulates the yield of endogenic catecholamines and thyroid hormones. Reduction of oxidation efficiency is due both to the dissociative action of fatty acids and to the effect of thyroid hormones on this system. As a result of all these processes, additional heat is released, which indeed gives rise to the calorigenic effect of catecholamines. S.D.

A80-14793 **Medical applications of aerospace technology.** D. C. Harrison, E. V. Schmidt, and L. F. Brennan (Stanford University, Stanford, Calif.). In: Space - The best is yet to come; Proceedings of the Sixteenth Space Congress, Cocoa Beach, Fla., April 25-27, 1979. Cocoa Beach, Fla., Canaveral Council of Technical Societies, 1979, p. 6-15 to 6-24. 11 refs.

The paper reviews methods by which biomedical application teams diffuse new technology from aerospace related research to medical applications. These teams are sponsored by NASA for applying aerospace technology to the solution of significant problems in biomedical research and clinical medicine and include laboratory and clinical applications. The technology transfer process is illustrated with specific examples which include biomedical electrodes, biotelemetry for pediatric gait analysis, and intracranial pressure monitoring, noting the need for a multidisciplinary approach. Innovative technology currently developed such as portable speech prosthesis, liquid circulating garments, and noninvasive determination of bone properties are described, and impediments to biomedical technology transfer are noted. A.T.

A80-14797 **Interdependence between the saccadic and the continuous eye movement control systems.** D. Bouis (Fraunhofer-Gesellschaft zur Förderung der angewandten Forschung, Karlsruhe, West Germany) and G. Vossius (Karlsruhe, Universität, Karlsruhe, West Germany). In: A link between science and applications of automatic control; Proceedings of the Seventh Triennial World Congress, Helsinki, Finland, June 12-16, 1978. Volume 1. Oxford and New York, Pergamon Press, 1979, p. 489-493. 8 refs.

The eye movements are considered to be under double control: one is continuous and regulates the speed of the tracking movement of the eye, the other is discontinuous and regulates the position of the eye by eye jumps named saccades. This paper covers the control problems of the total system which stems from the collaboration of the two branches. The controller takes the size of the error in position and in speed into account. It executes the error correction in a nearly optimal way through saccades or by varying the tracking speed. The experimental evidence and a mathematical model of the functional structure of the system including the optimization strategy are presented. (Author)

A80-14798 **Parameter estimation of radiocardiogram using a minicomputer.** K. Minato, M. Kuwahara (Kyoto University, Uji, Japan), Y. Yonekura, and A. Hirakawa (Kyoto University Hospital, Kyoto, Japan). In: A link between science and applications of automatic control; Proceedings of the Seventh Triennial World Congress, Helsinki, Finland, June 12-16, 1978. Volume 1. Oxford and New York, Pergamon Press, 1979, p. 533-540. 8 refs.

Radiocardiography has been widely used as a method for the quantification of cardiac output by applying the principle of the dye dilution method. In this paper, an efficient least square parameter estimation procedure in a frequency domain for a linear system with time delays, which is the model of transport process appearing in the radiocardiogram, is shown. The procedure is based on properties of Fourier transformation and a concept of a feature space, and parameter sensitivity analysis is applied to study behavior of parameters on the model. Some analyzed results of radiocardiograms are shown and it is verified that the procedure is sufficiently useful and efficient for routine clinical use. (Author)

A80-14801 **Integrated walking robot simulation and modelling.** D. E. Okhotsimskii, A. K. Platonov (Akademiia Nauk SSSR, Institut Prikladnoi Matematiki, Moscow, USSR), G. V. Gerkhen-Gubanov, V. G. Kuznetsov (Leningradskii Mekhanicheskii Institut, Leningrad, USSR), E. A. Devianin, A. V. Lenskii (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR), V. S. Gurfinkel, and A. Iu. Shneider (Akademiia Nauk SSSR, Institut Problem Peredachi Informatsii, Moscow, USSR). In: A link between science and applications of automatic control; Proceedings of the Seventh Triennial World Congress, Helsinki, Finland, June 12-16, 1978. Volume 2. Oxford and New York, Pergamon Press, 1979, p. 917-924. 20 refs.

The paper discusses some problems of development software and hardware for controlling the motion of an integrated walking robot. A six-legged vehicle supplied with a scanning distance-measuring system was taken as a reasonable configuration. Some results of computer simulation as well as results of the investigations carried out with computer-controlled laboratory models, are presented. (Author)

A80-15225 * **Problems and potentialities of cultured plant cells in retrospect and prospect.** F. C. Steward and A. D. Krikorian (New York, State University, Stony Brook, N.Y.). In: Plant cell and tissue culture: Principles and applications. Columbus, Ohio State University Press, 1979, p. 221-262. 125 refs. Grants No. NIH-GM-09609; No. NsG-7270; Contract No. NAS2-7846.

The past, present and expected future accomplishments and limitations of plant cell and tissue culture are reviewed. Consideration is given to the pioneering insights of Haberlandt in 1902, the development of culture techniques, and past work on cell division, cell and tissue growth and development, somatic embryogenesis, and metabolism and respiration. Current activity in culture media and technique development for plant regions, organs, tissues, cells, protoplasts, organelles and embryos, totipotency, somatic embryogenesis and clonal propagation under normal and space conditions, biochemical potentialities, and genetic engineering is surveyed. Prospects for the investigation of the induced control of somatic cell division, the division of isolated protoplasts, the improvement of haploid cell cultures, liquid cultures for somatic embryogenesis, and the genetic control of development are outlined. A.L.W.

A80-15231 # **The use of a positive displacement air cycle machine in a closed-loop environmental control system.** L. L. Midolo (USAF, Flight Dynamics Laboratory, Wright-Patterson AFB, Ohio). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-6.* 9 p. Members, $1.50; nonmembers, $3.00.

The paper describes a closed-loop environmental control system (ECS) concept which uses a positive displacement air cycle machine (PD-ACM) as a component in the system. Aircraft closed-loop ECS take-off-gross-weight penalty savings and life cycle cost benefits are developed and compared with conventional open-loop ECS. The PD-ACM performance is described and shown to be a competitive air cycle machine for use with the potentially low life cycle cost closed-loop ECS concept. (Author)

A80-15238 # **A study of the reduction of carbon dioxide in a silent electric discharge.** R. S. Luce (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-13.* 8 p. Members, $1.50; nonmembers, $3.00.

An investigation of the reduction of CO2 to O2 and CO in a silent electric discharge was undertaken with the intent of correctly understanding the process and operating it at optimum efficiency. The study led to an accurate description of the role of current in CO2 reduction in the induced ionized plasma. Voltage and frequency were important only as inducers of current in the plasma. Pressure and temperature are minimally influential in the process. Flow rate is important only in that gas residence time in the plasma is proportionally related to CO2 reduction. The large power consumption in the process was recognized as resulting from the low power factor of the reactor vessel which behaves as a dynamic electrical capacitor. The power factor was subsequently improved by an inductive element to make the reactor vessel capacitance part of a resonant circuit. It was found that the CO2 reduction process was most efficient in terms of power versus reduction rate when a voltage was employed that was only slightly higher than that needed to induce the plasma. The study concluded with a demonstration that with this apparatus one liter of CO2 could be reduced with an expenditure of less than 360 kilojoules (100 watt-hours) of energy. Had absolute efficiency been possible, 11.95 kilojoules (3.29 watt-hours) would have been required for the same result. (Author)

A80-15240 * # **High-pressure protective systems technology.** H. C. Vykukal and B. W. Webbon (NASA, Ames Research Center, Moffett Field, Calif.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-15.* 16 p. 14 refs. Members, $1.50; nonmembers, $3.00.

Space suit assemblies developed in the past provide candidate concepts to meet future extravehicular-activity requirements. The paper is concerned with the development of the modular 8-psi Ames AX-3 high-pressure suit assembly on the basis of a review of existing suit assemblies, component developments, and mobility exercises. The discussion covers description of the AX-3 suit, its performance, and technology developments. In conclusion, high-pressure space suit technology is demonstrated with the development of the Ames AX-3 suit assembly. Several photographs and diagrams supplement the text. S.D.

A80-15241 * # **Design and development of a trace contaminant removal canister for Spacelab.** C. D. Ray, J. W. Littles, J. L. Blair (NASA, Marshall Space Flight Center, Huntsville, Ala.), and R. B. Jagow (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-16.* 11 p. 15 refs. Members, $1.50; nonmembers, $3.00. NASA-supported research.

The paper describes the overall approach used by NASA-MSFC to design and develop a trace contaminant removal canister for Spacelab. The elements of this approach include the establishment of a trace contaminant load model, analysis and testing to define a preliminary design, development testing to verify the adequacy of the selected design, and testing to define a suitable canister location in the transfer tunnel ventilation system. The canister utilizes a catalyst material which is effective in removing carbon monoxide at room temperature, as well as plain and acid treated charcoal. The canister alone will control all contaminants in the load model below their maximum allowable concentration (MAC) levels without assistance from the baseline environmental control system (ECS) except for methyl alcohol and ammonia. V.T.

A80-15243 # **Development of a Space Shuttle plant growth unit.** R. B. Maine, P. A. Wagner, T. M. Olcott, and R. S. Luce (Lockheed Missiles and Space Co., Inc., Sunnyvale, Calif.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-19.* 11 p. 7 refs. Members, $1.50; nonmembers, $3.00.

The Space Shuttle Plant Growth Experiment studies the effects of space flight on plant lignification. The hardware required to support scientific investigations designed to examine whether the polymer lignin will aid plants in growing upright against the force of gravity is examined. Experiments are conducted using a self-contained package which holds six plant growth chambers each containing 16 plant seedlings for a total of 96 plants. Attention is given to the subsystems that provide lighting, thermal control, instrumentation/data management, power and control/display functions meeting both environmental and data acquisition requirements. C.F.W.

A80-15251 * # **Closed-ecology life support systems /CELSS/ for long-duration, manned missions.** M. Modell (MIT, Cambridge, Mass.) and J. M. Spurlock (Georgia Institute of Technology, Atlanta, Ga.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-27.* 7 p. 10 refs. Members, $1.50; nonmembers, $3.00. NASA-sponsored research.

Studies were conducted to scope the principal areas of technology that can contribute to the development of closed-ecology life support systems (CELSS). Such systems may be required for future space activities, such as space stations, manufacturing facilities, or colonies. A major feature of CELSS is the regeneration of food from carbon in waste materials. Several processes, using biological and/or physico-chemical components, have been postulated for closing the recycle loop. At the present time, limits of available technical information preclude the specification of an optimum scheme. Nevertheless, the most significant technical requirements can be determined by way of an iterative procedure of formulating, evaluating and comparing various closed-system scenario. The functions features and applications of this systems engineering procedure are discussed. (Author)

A80-15252 # **Use of phytotrons in assessing environmental requirements for plants in space habitats.** C. D. Raper, Jr., J. F. Thomas (North Carolina State University, Raleigh, N.C.), and T. A. Pollock (East Carolina University, Greenville, N.C.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-28.* 6 p. 12 refs. Members, $1.50; nonmembers, $3.00.

Phytotrons are laboratories designed for study of plant responses to artificial light, temperature, humidity, nutrition, and carbon dioxide composition of the atmosphere. Thus, phytotrons provide an existing capability for determining the environmental requirements for higher plant culture in a space habitat. Coupled with mathematical modeling, data from phytotron experimentation can become the basis for projections of amounts of material that are tied up in the agricultural system at any time as well as the rate of removal of carbon dioxide and evolution of oxygen. Such information is critical for feasibility studies of the life support system. Other examples of critical information that can be gained in phytotron experimentation will be discussed. (Author)

A80-15253 * # **Recycling plant, human and animal wastes to plant nutrients in a closed ecological system.** H. P. Meissner and M. Modell (MIT, Cambridge, Mass.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-29.* 6 p. Members, $1.50; nonmembers, $3.00. NASA-supported research.

The essential minerals for plant growth are nitrogen, phosphorous, potassium (macronutrients), calcium, magnesium, sulfur (secondary nutrients), iron, manganese, boron, copper, zinc, chlorine, sodium, and molybdenum (micronutrients). The first step in recycling wastes will undoubtedly be oxidation of carbon and hydrogen to CO2 and H2O. Transformation of minerals to plant nutrients depends upon the mode of oxidation to define the state of the nutrients. For the purpose of illustrating the type of processing required, ash and off-gas compositions of an incineration process were assumed and subsequent processing requirements were identified. Several processing schemes are described for separating out sodium chloride from the ash, leading to reformulation of a nutrient solution which should be acceptable to plants. (Author)

A80-15254 # **Controlled-environment agricultural systems as food sources for large space habitats.** J. M. Phillips (Arizona Research Associates, Inc., Tucson, Ariz.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-30.* 7 p. 22 refs. Members, $1.50; nonmembers, $3.00.

Controlled-environment agriculture (CEA), presently used in countries that are congested (Japan, Europe) or have severe weather problems (Soviet Union, Abu Dhabi), may be applied in the near future towards developing large space habitats into closed life support systems. CEA systems have provided such benefits as increased crop yield, accelerated growth rates, efficient resource utilization and predictability of production, but their drawback is expense in terms of capital, energy, labor, and materials. Applying CEA technology in space (using recycled wastes) could generate beneficial spin-offs for earth, including development of more efficient greenhouses and recycling programs, productivity research in agriculture, and increased knowledge regarding the quantitative requirements to sustain human life. J.P.B.

A80-15255 * # **Food technology in space habitats.** M. Karel (MIT, Cambridge, Mass.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-31.* 6 p. 10 refs. Members, $1.50; nonmembers, $3.00. NASA-supported research.

The research required to develop a system that will provide for acceptable, nutritious, and safe diets for man during extended space missions is discussed. The development of a food technology system for space habitats capable of converting raw materials produced in the space habitats into acceptable food is examined. C.F.W.

A80-15256 * # **Bosch - An alternate CO2 reduction technology.** D. B. Heppner, T. M. Hallick (Life Systems, Inc., Cleveland, Ohio), D. C. Clark (NASA, Marshall Space Flight Center, Huntsville, Ala.), and P. D. Quattrone (NASA, Ames Research Center, Moffett Field, Calif.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-32.* 9 p. 11 refs. Members, $1.50; nonmembers, $3.00. Contracts No. NAS8-30891; No. NAS8-32492; No. NAS2-8666.

The Bosch process is the most promising CO2 reduction concept for future prolonged space missions. The paper presents the design of a three-person-capacity preprototype B-CRS (Bosch-based CO2 Reduction Subsystem). It is sized to reduce 3.0 kg/d CO2 generated by the crew and to supply the product water to an O2 generation subsystem to obtain O2. The design supports future development of the B-CRS as an alternative CO2 reduction subsystem to the Sabatier-based process presently under test at NASA. The discussion covers the Bosch CO2 reduction concept, process and hardware description, performance parameters, design specifications, subsystem schematic and operation, mechanical subsystem summary, control/monitor instrumentation, and subsystem packaging. A B-CRS with a proven technological base is an attractive CO2 reduction subsystem that eliminates overboard venting. S.D.

A80-15257 * # **Development of the electrochemically regenerable carbon dioxide absorber for portable life support system application.** R. R. Woods, D. B. Heppner, R. D. Marshall (Life Systems, Inc., Cleveland, Ohio), and P. D. Quattrone (NASA, Ames Research Center, Moffett Field, Calif.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-33.* 9 p. 12 refs. Members, $1.50; nonmembers, $3.00. Contract No. NAS2-8666.

As the length of manned space missions increase, more ambitious extravehicular activities (EVAs) are required. For the projected longer mission the use of expendables in the portable life support system (PLSS) will become prohibited due to high launch weight and volume requirements. Therefore, the development of a regenerable CO2 absorber for the PLSS application is highly desirable. The paper discusses the concept, regeneration mechanism, performance, system design, and absorption/regeneration cycle tessting of a most promising concept known as ERCA (Electrochemically Regenerable CO2 Absorber). This concept is based on absorbing CO2 into an alkaline absorbent similar to LiOH. The absorbent is an aqueous solution supported in a porous matrix which can be electrochemically regenerated on board the primary space vehicle. With the metabolic CO2 recovery the ERCA concept results in a totally regenerable CO2 scrubber. The ERCA test hardware has passed 200 absorption/regeneration cycles without performance degradation. S.D.

A80-15258 # **EDC - A regenerable CO2 removal subsystem for an enhanced capability orbiter.** R. D. Marshall, F. H. Schubert, and P. Y. Yang (Life Systems, Inc., Cleveland, Ohio). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-34.* 12 p. 17 refs. Members, $1.50; nonmembers, $3.00.

The Electrochemical Depolarized Carbon Dioxide (CO2) Concentrator (EDC) is being developed as an advanced CO2 removal concept to replace the baseline lithium hydroxide (LiOH) system. The EDC offers significant weight savings through reduced expendables for projected enhanced capability Orbiter missions. The EDC can be integrated with existing Shuttle resources or, as mission profiles require, combined with Water Vapor Electrolysis (WVE) for oxygen (O2) regeneration to further reduce mission expendables. The EDC and EDC/WVE subsystems were evaluated for: (1) the baseline Shuttle when expanded to accommodate a crew of seven, (2) an Extended Duration Orbiter (EDO) with a Power Extension Package (PEP) to reduce fuel cell expendables and (3) an EDO with a full capability power module to eliminate fuel cell expendables. Weight savings attainable using EDC CO2 Removal Subsystem are 59 kg (130 lb), 218 kg (480 lb), and 363 kg (800 lb), respectively, for the mission options evaluated. (Author)

A80-15260 # **Development of an improved Sabatier reactor.** P. J. Birbara and F. Sribnik (United Technologies Corp., Hamilton Standard Div., Windsor Locks, Conn.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-36.* 10 p. 7 refs. Members, $1.50; nonmembers, $3.00.

This paper presents the results of recent experimental and analytical studies of a Sabatier reactor where carbon dioxide and hydrogen in the presence of a catalyst react to form water, methane, and heat. The work undertaken in this program was aimed at simplification of design and control concepts of Sabatier subsystems. To this end, effort was expended to the development of UASC-151G, a highly active, physically durable catalyst composed of ruthenium on alumina. UASC-151G is five times as active as that supplied for the SSP program. The use of this improved catalyst has very significant effects on the Sabatier reaction subsystem design including: (1) lower temperature starting capability, (2) simiplification of active control and instrumentation requirements, (3) simplified reactor design, (4) improved reliability, and (5) high conversion efficiencies using only small amounts of catalyst. Reasonable agreement between test and computer simulation has been obtained for temperature and lean component conversion efficiencies for both steady-state and cyclic operation. (Author)

A80-15266 # **/Hard Hat/ EVA, personal equipment to support large scale construction in space.** R. C. Wilde (United Technologies Corp., Hamilton Standard Div., Windsor Locks, Conn.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-43.* 9 p. Members, $1.50; nonmembers, $3.00.

During the next 20 years, extravehicular activity (EVA) to assemble large-scale space structures in orbit will require equipment with high cycle life, high mobility joints and improved hygiene for use up to 8 hours during both orbital light and dark periods, at pressures up to 0.54 Atm (to eliminate the purge oxygen prebreathe). The pressure enclosure will feature no don-doff assistance, wrist-mounted displays and controls, the movable scye bearing (to allow overhead arm movement), and modular construction for comfort. The materials evaluated for up to 29 kg of radiation shielding are metallic glass, multidrawn Chromel-R metal fabric and flexible laminated sheet material. The transmissibility of wide angle helmet visors will be automatically controlled by miniature photo sensors, while there is a novel concept of thermal insulation for the gloves. The potassium carbonate liquid sorbent process (regenerable) may replace lithium hydroxide (non-regenerable) as a carbon dioxide remover in the life support system, and thermal control will be effected by a hybrid concept: a sublimator/phase change material, radiator approach. J.P.B.

A80-15268 # **Environmental systems for aquatic animal studies in the Shuttle era.** R. B. Hoffman (General Electric Co., Space Div., Houston, Tex.), S. R. Hunt, Jr. (General Electric Co., Space Div., Valley Forge, Pa.), G. Kring, and G. Wirths (Dornier System GmbH, Friedrichshafen, West Germany). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-45.* 8 p. 9 refs. Members, $1.50; nonmembers, $3.00.

Open and closed life support systems for aquatic animals utilized in parabolic aircraft flight and spaceborne biomedical experiments are reviewed. The gas-permeable polyethylene bags used to house fish eggs on the Skylab and ASTP missions, the plexiglass fish cages used in parabolic flight experiments and the Biosatellite frog egg modules are described as instances of short duration open systems. Long duration closed systems proposed as part of the Life Sciences Laboratory Equipment inventory for Spacelab are detailed, including a modified Dornier fish incubator for behavioral, developmental and vestibular investigations, and an integrated modular frog-holding facility containing a specimen container with provisions for stereotaxic positioning and a pump separator for gas exchange and fluid purification. The systems are shown to be capable of accommodating a large diversity of experiments under habitable conditions for long and short duration flights. A.L.W.

A80-15271 # **Applications of the thermoelectrically integrated membrane evaporator subsystem.** A. O. Brouillet and C. K. Boynton, Jr. (United Technologies Corp., Hamilton Standard Div., Windsor Locks, Conn.). *American Society of Mechanical Engineers, Intersociety Conference on Environmental Systems, 9th, San Francisco, Calif., July 16-19, 1979, Paper 79-ENAs-48.* 7 p. Members, $1.50; nonmembers, $3.00.

Future extended duration space missions will benefit from conservation and recovery of vehicle and crew waste products to reduce resupply expenditures. Reclamation of potable water from urine, humidity condensate, and wash water is the single most significant candidate for recovery. The Thermoelectrically Integrated Membrane Evaporator Subsystem (TIMES) distillation water recovery concept utilizing hollow fiber membranes for phase separation and thermoelectric heat pumps for latent heat recovery brings unique advantages to meet the challenge of reliable, efficient, zero gravity water recovery. The TIMES concept limits precision moving parts to valves and pumps leaving small, lightweight static parts for the evaporation and condensation modules. The many varied applications of the TIMES, e.g., Extended Duration Orbiter, space 'Construction Shacks', free-flying space labs, and Space Station will benefit from the modularity of the concept. The paper discusses the optimization and application of the TIMES concept and the benefit of the concept's modularity to these aspects. Further vehicular and other subsystem integration flexibility of the TIMES concept are presented. (Author)

A80-15629 **The place of computerized axial tomography /CAT/ in the examination of flight crews (Place de la tomodensitométrie /TDM/ dans l'expertise du personnel navigant).** E. A. Cabanis, M. T. Iba-Zizen, L. Guillaumat, E. Queiroz, K. I. S. Teixeira, G. Porret (Centre National d'Ophtalmologie des 15/20, Paris, France), R. P. Delahaye, and P. Metges (Hôpital d'Instruction des Armées Begin, Saint-Mandé, Val-de-Marne, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 2nd Quarter, 1979, p. 114-123. In French.

The principles and techniques of cephalic computerized axial tomography (CAT) are reviewed, and results of the application of the technique are presented, with a consideration of its use for the diagnosis of pathological conditions in flight crews. The computerized registration of X-ray fluxes and generation of the X-ray image are discussed, and the practical conditions of examination are outlined. Results of the CAT scan of a presumably normal cephalic cavity are illustrated, together with images obtained from persons suffering tumoral, vascular, traumatic, infectious, degenerative and malformation syndromes. Indications, contraindications, and clinical situations for the application of the technique to flight personnel are discussed, and an increase in CAT indications for flight crews is predicted. A.L.W.

A80-15633 **The physiopathology of vertebral pain in helicopter pilots (Physiopathologie des algies vertébrales des pilotes d'hélicoptères).** R. P. Delahaye, R. Auffret, P. J. Metges, J. L. Poirier, and J. Vicens (Hôpital d'Instruction des Armées Begin, Saint Mandé, Val-de-Marne; Centre d'Essais en Vol, Brétigny-sur-Orge, Essonne; Armée de l'Air, Ecole d'Application, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 2nd Quarter, 1979, p. 142-145. In French.

The effects of posture and vibration on spinal pathology in helicopter pilots are discussed, and preventative measures are presented. Consideration is given to the physical requirements of the task of piloting a helicopter, the relations between pilot postures determined by the seats of various helicopters and optimal comfort angles, and the origin of vertebral pain. The physiological effects of resonant vibrations in the z-axis on a spine already sensitized by poor posture are discussed, noting the apparition of clinically observed degenerative discopathy. Attempts to adapt aircraft to human requirements, such as the replacement of articulated metal systems by single plastic constructions, the installation of vibration dampers and the use of automatic postural stabilizers in the present-generation Gazelle, Dauphin, Ecureuil and Super Frelon helicopters, are presented, and the selection and periodic examination of helicopter pilots are discussed. A.L.W.

A80-15634 **Investigation of certain electrophysiological and biochemical parameters in hypoxia testing at a simulated altitude of 5500 m (Investigation de certains paramètres électrophysiologiques et biochimiques dans l'épreuve d'hypoxie simulée à une altitude de 5500 m).** A. T. C. Popescu, I. Pintilie, I. Nastoiu, L. Constantinescu, and V. Cumpanasu (Centre Médical Aéronautique, Bucharest, Rumania). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 2nd Quarter, 1979, p. 146-149. In French.

Electrophysiological and biochemical changes in healthy subjects following exposure to 15 min at a simulated altitude of 5500 m in a pressure chamber are determined. Electrophysiological changes are found to be within the classical range of hypoxia effects, consisting of a progressive tachycardia parallel to the increase in altitude. Biochemical analyses reveal no significant changes in blood composition following hypoxia, however a marked increase in potassium levels and significant decreases in magnesium and phosphorous levels in the urine are observed. The lack of myocardial electrical variations obtained is interpreted as a demonstration of the innocuousness of the test procedure, and changes in urine electrolyte concentrations are discussed in terms of the renin-angiothensin-aldosterone mechanism and the compensations of respiratory alkalosis. A.L.W.

A80-15635 **The importance of continuous electrocardiogram recording in conduction disorders in flight crews (Intérêt de l'enregistrement continu de l'électro cardiogramme dans les troubles de la conduction chez le personnel navigant).** A. Seigneuric, G. Leguay, and J. M. Denee (Hôpital d'Instruction des Armées Dominique Larrey, Versailles, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 2nd Quarter, 1979, p. 150-153. 5 refs. In French.

The importance of continuous electrocardiography in localizing and determining the nature of conduction disorders in flight crews is demonstrated, and a technique for continuous electrocardiogram recording is presented. The case history of a 31-year-old pilot with an intermittently appearing atrioventricular block is used to illustrate the utility of the Holter technique of continuous electrocardiography. The Holter technique is described as consisting of recording an electrocardiogram on magnetic tape continuously for periods of 12, 24 or even 72 hours and reading it semiautomatically at accelerated speeds. It is pointed out that continuous electrocardiography for 24 hours and during a normal flight allowed the diagnosis of a second degree Wenkebach atrioventricular block associated with a sinus rate slowing, which implied a vagal origin. A.L.W.

A80-15636 **The application of indirect oxymetry in the criticism of the dilution standards of oxygen regulators (Apport de l'oxymétrie indirecte dans la critique des normes de dilution des régulateurs d'oxygène).** H. Marotte and H. Vieillefond (Centre d'Essais en Vol, Brétigny-sur-Orge, Essonne, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 2nd Quarter, 1979, p. 154-156. In French.

A noninvasive means of measuring arterial oxygen saturation is applied to the evaluation of two emergency oxygen masks for airline personnel. The efficacies of two oxygen masks which did not meet FAA dilution standards at simulated altitudes between 10,000 and 20,000 ft in supplying sufficient amounts of oxygen to the blood were determined by means of an ear oxymeter which measures the absorption of eight wavelengths of light by arterial blood. Results indicate that neither of the masks allowed oxygen saturation to fall below 92 percent at simulated altitudes up to 25,000 ft, thus demonstrating the sufficiency of the masks in question, in contrast to the results of standard tests. A.L.W.

A80-15996 **Unreliability of exercise-induced R wave changes as indexes of coronary artery disease.** S. Wagner, K. Cohn, and A. Selzer (Presbyterian Hospital, San Francisco, Calif.). *American Journal of Cardiology*, vol. 44, Dec. 1979, p. 1241-1246. 38 refs.

The responses of 40 young normal subjects and 28 patients with chest pain and no significant coronary arterial obstruction were compared with those of 73 patients with coronary arterial narrowing of various degrees of severity, all having undergone submaximal, multiple-lead multistaged treadmill exercise testing. The objective was to assess the diagnostic value of exercise-related QRS amplitude changes. No significant relation was found between the extent of coronary artery disease (CAD) and R wave changes. An analysis of multiple variables suggested possible correlations with factors not directly related to ischemia. It is concluded that exercise-induced QRS amplitude changes are unreliable predictors of the presence, absence or severity of CAD. S.D.

A80-15997 **Analysis of exercise-induced R wave amplitude changes in detection of coronary artery disease in asymptomatic men with left bundle branch block.** G. S. Uhl, J. Andrew, and C. Hopkirk (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *American Journal of Cardiology*, vol. 44, Dec. 1979, p. 1247-1250. 18 refs.

Results are presented for a study designed to assess the usefulness of exercise-induced R wave amplitude changes in detecting coronary artery disease (CAD) in asymptomatic men with acquired left bundle branch block (LBBB). The treadmill exercise ECGs of 44 test subjects were analyzed and the results correlated with findings on selective coronary angiography. The results indicate that the increase in R wave amplitude with exercise appears to be a sensitive test in identifying CAD in asymptomatic persons with LBBB. S.D.

A80-15998 **Echocardiographic recognition of atrioventricular valve stenosis associated with endocardial cushion defect - Pathologic and surgical correlates.** K. R. Bloom, R. M. Freedom, C. M. Williams, G. A. Trusler, and R. D. Rowe (Hospital for Sick Children, Toronto, Canada). *American Journal of Cardiology*, vol. 44, Dec. 1979, p. 1326-1331. 22 refs.

The paper describes nine infants who had clinical and angiocardiographic features of an endocardial cushion defect but who also had significant stenosis of either the mitral or tricuspid valve. The surgical repair of endocardial cushion defect is now an accepted practice. However, operation may not be possible in an important pathologic subgroup of infants with this defect because of associated A-V valve stenosis and a smaller than normal or even a hypoplastic ventricle. M mode echocardiography enables one to define the small ventricle and abnormal portion of the common A-V valve. One must then obtain angiograms in specific views to determine ventricular size. Preoperative recognition of this combination of defects may thus lead one to suggest a more palliative surgical approach in combination with a vigorous medical regimen for treatment of heart failure. These measures might enable some of these infants to survive to an age when ventricular growth could make a more definitive surgical approach possible. S.D.

A80-16068 **Uracil in carbonaceous meteorites.** P. G. Stoks and A. W. Schwartz (Nijmegen, Katholieke Universiteit, Nijmegen, Netherlands). *Nature*, vol. 282, Dec. 13, 1979, p. 709, 710. 18 refs.

The paper reports positive identification of uracil in water and formic acid extracts of Murchison, Murray, and Orgueil carbonaceous meteorites. This investigation was made because of the reported synthesis of uracil, thymine, and cytosine in Fischer-Tropsch-type reactions which may be significant in the production of organic material in meteorites and of interest to theories of chemical evolution and the origin of life. Control experiments showed that uracil and thymine were selectively eluted from meteorite sample extracts and analyzed by cation and anion exclusion chromatography. Peaks in the uracil position on the cation exclusion chromatograms were refractionated and analyzed by mass spectrometry which confirmed the identity of uracil. A.T.

A80-16393 **A closed system: Man-higher plants /four-month experiment/ (Zamknutaia sistema: Chelovek-vysshie rasteniia /chetyrekhmesiachnyi eksperiment/).** Edited by G. M. Lisovskii. Novosibirsk, Izdatel'stvo Nauka, 1979. 160 p. In Russian.

The monograph reports the results of a unique four-month experimental study in a hermetically closed system where the environment of human habitat was continuously regenerated by higher plants. These plants have fully provided the human subjects with oxygen, water, and the basic part of vegetable food. The experimental procedure used and the structure of the system are described. Also provided are data obtained from phytophysiological, medicobiological, biochemical and microbiological investigations of the man-higher plants system. S.D.

A80-16430 # **The Life Sciences Flight Experiments Program - An update.** J. C. Stonesifer. *American Astronautical Society, Annual Meeting, Los Angeles, Calif., Oct. 29-Nov. 1, 1979, Paper 79-250.* 9 p.

The Shuttle era will provide the first opportunity to carry out a thorough experimental program in the life sciences in space under conditions approximating those of ground-based laboratories. The

Life Sciences Flight Experiments Program is organized to take full advantage of this opportunity, and to provide the basic programmatic capabilities for the conduct of associated scientific investigations. The paper provides an update on this program as one moves from the early planning phases and the development of the programmatic capabilities into the implementation activities of the program. The discussion covers the experiment selection process; the experiment definition phase; the Life Sciences Laboratory Equipment; the life sciences support facilities; program data system design and implementation; and development, engineering and operations contract. S.D.

A80-16431 * # **Experiments for dedicated life science missions.** R. M. Farrell, J. A. Rummel (NASA, Life Sciences Div., Washington, D.C.), and T. L. Schilling (General Electric Co., Arlington, Va.). *American Astronautical Society, Annual Meeting, Los Angeles, Calif., Oct. 29-Nov. 1, 1979, Paper 79-251.* 22 p.

Over 80 investigations were selected recently as candidate experiments for Life Science Spacelab Missions in the 1983-1985 time frame. A payload consisting of perhaps 20 of these experiments will be selected in 1981, approximately two years before the first dedicated Life Sciences Spacelab Mission. Implementation of a carefully designed management process will be a prerequisite for accomplishing the development, flight, and post-flight analysis of a maximum number of these investigations, working within currently approved resources and schedules. This paper provides an overview of the Life Sciences Flight Experiments Program, and describes the approach being taken at NASA Headquarters in its planning and implementation. (Author)

A80-16452 **Use of microspheres in measurement of regional blood flows during +Gz stress.** M. H. Laughlin, J. W. Burns, and F. M. Loxsom (USAF, School of Aerospace Medicine, Brooks AFB; Trinity University, San Antonio, Tex.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 47, Dec. 1979, p. 1148-1156. 24 refs.

The use of the radiolabeled microsphere technique for the study of the effects of +G sub z acceleration on regional blood flow is examined and analysis of this technique in a high acceleration environment is presented. Chronically implanted, electromagnetic, aortic flow probes were used to determine the relationship between aortic blood flow velocity and +G sub z acceleration in conscious adult miniature swine. It was found that swine are able to compensate to acceleration levels equal to or below 7 G sub z, but exposure to +9 G sub z often resulted in unstable cardiovascular states and diminished cardiac outputs. It was also found that if aortic pressure and heart rate attain a steady state during acceleration, the application of the microsphere technique during +G sub z acceleration is theoretically valid. It is concluded the radiolabeled microsphere technique is as accurate in acceleration studies as it is in the laboratory work. A.T.

A80-16453 **Adrenocortical function in rats chronically exposed to high altitude.** L. C. Ou and S. M. Tenney (Dartmouth College, Hanover, N.H.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 47, Dec. 1979, p. 1185-1187. 22 refs. Grants No. NIH-HL-02888; No. NIH-HL-21159.

In rats exposed to a simulated altitude of 5,486 m for 3 mo, pituitary and adrenal glands hypertrophied and plasma levels of corticosterone increased more than threefold over sea-level controls. The in vitro rates of corticosterone production by the quartered adrenal gland were significantly enhanced, but the responsiveness of the adrenal gland to ACTH remained normal. (Author)

A80-16454 **Influence of air velocity and heat acclimation on human skin wettedness and sweating efficiency.** V. Candas, J. P. Libert, and J. J. Vogt (CNRS, Centre d'Etudes Bioclimatiques, Strasbourg, France). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 47, Dec. 1979, p. 1194-1200. 25 refs.

A80-16455 **Plasma catecholamines and cardiovascular responses to cold and mental activity.** J. LeBlanc, J. Cote, M. Jobin, and A. Labrie (Université Laval, Quebec, Canada). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 47, Dec. 1979, p. 1207-1211. 15 refs.

A80-16456 **Maximal work capacity of women during acute hypoxia.** J. A. Wagner, D. S. Miles, S. M. Horvath, and J. A. Reyburn (California, University, Santa Barbara, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 47, Dec. 1979, p. 1223-1227. 29 refs. Grants No. AF-AFOSR-78-3534; No. NIH-AG-00021.

Six healthy women (22-34 yr) performed maximal bicycle work in a hypobaric chamber at sea level and at simulated altitudes of 2,130 and 3,050 m. Maximal oxygen uptake decreased 10 and 15% from sea-level values at 2,130 and 3,050 m, respectively. At these altitudes minute ventilation increased 17 and 22% respectively, a consequence of increased respiratory rate. Respiratory exchange ratios increased 10 and 14%, and oxygen pulse decreased 9 and 12%, respectively, at 2,130 and 3,050 m. Maximal blood lactates, heart rates, cardiac outputs, and plasma volume shifts were unaffected by these altitudes. Although during maximal work the percentage increases in minute ventilation, respiratory rate, and respiratory exchange ratio that resulted from altitude exposure were greater in women than those previously reported for men, the decrements in minute ventilation were comparable to those in men. The results show that relative to their performance at sea level, men and women have equal ability to perform maximal work at altitudes up to 3,050 m. (Author)

A80-16457 **Effects of hypophysectomy and dexamethasone on rat adrenal response to microwaves.** W. G. Lotz and S. M. Michaelson (Rochester, University, Rochester, N.Y.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 47, Dec. 1979, p. 1284-1288. 14 refs. Research supported by the U.S. Department of Energy; U.S. Food and Drug Administration Contract No. 74-111.

Circulating corticosterone levels were measured to compare the adrenocortical response to acute microwave exposure of normal, hypophysectomized, or sham-hypophysectomized rats. Plasma corticosterone levels in acutely hypophysectomized rats exposed to 60 mW/sq cm for 60 min were below control levels, indicating that the microwave-induced corticosterone response observed in normal, intact rats is dependent on ACTH secretion by the pituitary. In other groups of rats pretreated with dexamethasone before being exposed to microwaves for 60 min, the corticosterone response to a 40-mW/sq cm exposure was completely suppressed by doses equal to or greater than 3.2 micrograms dexamethasone/100 g body weight. However, the corticosterone response to a 70-mW/sq cm exposure was only partially suppressed by prior adminstration of 3.2 or 5.6 dexamethasone/100 g body weight. The evidence obtained in these experiments, in conjunction with the results of other experiments previously reported, is consistent with the hypothesis that the stimulation of the adrenal axis in the microwave-exposed rat is a systemic integrative process due to a general hyperthermia. (Author)

A80-16459 # **Search for microorganisms in space (Poisk mikroorganizmov v kosmose).** L. I. Rubenchik. Kiev, Izdatel'stvo Naukova Dumka, 1979. 132 p. 24 refs. In Russian.

The book is concerned with the interesting problem of existence of life in space. The latest information about space biology is provided. Other aspects of interest are discussed, such as the origin of life on the earth, the possibility of life genesis on other planets, and related problems. Particular attention is given to the search for microorganisms beyond the earth. S.D.

A80-16461 # **Artificial sensory organs: Problems of modeling sensory systems (Iskusstvennye organy chuvstv: Problemy modelirovaniia sensornykh sistem).** S. V. Fomin, E. N. Sokolov, and G. G. Vaitkiavichius. Moscow, Izdatel'stvo Nauka, 1979. 180 p. 111 refs. In Russian.

The book summarizes the results of 15-year research work using psychophysical, neurophysiological and cybernetic methods. The investigations were carried out according to the man-neuron-model scheme. The discussion focuses on the construction of artificial human and animal sensory organs. Analyzer systems, based on the mechanism of differential-sensitivity enhancement, encode the stimulus by the number of the channel of maximum excitation. Attention is given to the analyzers of intensity, color, orientation, directional lines and velocity of an object, along with its position in space. S.D.

A80-16463 **Psychophysical studies of human-operator activity and instrumentation for these studies (Psikhofiziologicheskie issledovaniia deiatel'nosti cheloveka-operatora i ikh tekhnicheskoe obespechenie).** Edited by V. G. Volkov. Moscow, Izdatel'stvo Nauka, 1979. 92 p.

A collection of papers is presented on such topics as error analysis of operator recognition of visual images, autogenic training as a method of stimulator operator work capacity, pursuit-tracking simulator with adaptive marker-trajectory program, and psychic models of hypo- and hyper-gravity. Consideration is also given to: psychophysiological characteristics of man under extreme conditions, spectral correlation analysis of physiological processes, and eye-movement reaction during tracking of discrete stimuli. B.J.

A80-16464 # **Error dynamics of operator recognition of visual images (Dinamika oshibok raspoznavaniia operatorom zritel'nykh obrazov).** M. V. Frolov, E. P. Sviridov, and L. S. Khachatur'iants. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 3-7. In Russian.

Experimental results are presented on human-operator recognition of noisy visual images (the numeral 1-9) in the case of prolonged (multihour and multiday) operator activity. The error dynamics of recognition is evaluated as a function of fatigue caused by prolonged activity and absence of feedback on the results of the activity; the error dynamics is also studied as a function of preliminary instruction, forming a subjective model of the experimental situation. Various classes of errors are identified, including signal miss, false alarm, and signal confusion. Physiological indices of operator functional state are correlated with operator performance indices. B.J.

A80-16465 # **Autogenic training as a method of stimulating operator work capacity (Autogennaia trenirovka kak metod stimuliatsii rabotosposobnosti operatora).** Iu. F. Isaulov. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 12-15. 6 refs. In Russian.

The paper discusses experimental data characterizing the influence of special autogenic training on operator work capacity, determined in operation with various types of control systems. The efficiency of autogenic training for various levels of work-related fatigue is evaluated. It is shown that autogenic training leads to full recovery of work capacity, depressed after continuous activity in the course of three days and nights. B.J.

A80-16466 # **Pursuit-tracking simulator with adaptive pseudorandom program of marker trajectory (Imitator presleduiushchego slezheniia s adaptiruiushcheisia psevdosluchainoi programmoi traektorii metki).** V. G. Volkov. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 15-20. 9 refs. In Russian.

The paper describes method and equipment for a two-coordinate pursuit tracking test. The trajectory of the pursued marker simulates the motion of a material point located in a viscous medium and undergoing collisions with other material points. Marker trajectory on the display screen is determined by the direction and force of collisions, which are randomly distributed, while the 'mean' velocity of the marker is given by the number of these collisions and depends on the performance of the operator. B.J.

A80-16467 # **Physiological characteristics of psychic models of hypo- and hyper-gravity (Fiziologicheskie osobennosti psikhicheskikh modelei gipo- i gipergravitatsii).** L. P. Grimak and N. N. Lebedeva. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 26-34. 6 refs. In Russian.

The paper presents results of a 10-day experiment using psychic models of hypo- and hyper-gravity in a strict hypodynamic framework. EKG, EEG, EMG, and ERG, and X-ray cardiographic studies are used to conduct a differential analysis of functional changes in the organism within the framework of a given psychic model. Some suggestions are made as to the elimination of negative functional changes associated with weightlessness under conditions of actual space flight. B.J.

A80-16468 # **Investigation of the psychophysiological characteristics of man under extreme conditions (Izuchenie psikhofiziologicheskikh kharakteristik cheloveka v ekstremal'nykh usloviiakh).** N. F. Luk'ianova. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 34-39. 6 refs. In Russian.

The paper reports results of the psychological testing of 33 subjects under extreme conditions, namely survival on life rafts in the open sea. It is found that preliminary testing of functional, psychological, and personality characteristics of subjects makes it possible to predict their behavior in the extreme situation. A 'negative' dynamics in the occurrence of principal psychic processes (i.e., attention and thinking) is disclosed. B.J.

A80-16469 # **Analysis of the mean number of intersections of the zero level by physiological processes (Analiz srednego chisla peresechenii fiziologicheskim protsessom nulevogo urovnia).** M. V. Frolov. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 40-46. 5 refs. In Russian.

The paper discusses the use of spectral and spectral correlation methods in the analysis of medical (e.g., EKG and EEG) data. Particular consideration is given to aspects of evaluating the mean number of zero-level intersections in relation to finite time of analysis and unknown spectral shape. Formulas are presented making it possible to evaluate the centroid from the mean number of intersections per unit time. B.J.

A80-16470 # **Human operator eye-lid movement reaction during intense visual tasks involving the detection and tracking of visual signals (Vekodvigatel'naia reaktsiia u cheloveka-operatora pri napriazhennoi zritel'noi rabote no obnaruzheniiu i otslezhivaniiu zritel'nykh signalov).** E. P. Sviridov. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 46-52. 13 refs. In Russian.

A80-16471 # **Amplitude-phase discriminator with two-CRT oscillograph display (Amplitudno-fazovyi diskriminator s displeem na dvukhluchevom ostsillografe).** G. I. Nikitin. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 53-58. In Russian.

The paper describes an amplitude-phase discriminator for the recording of brain neuron activity. The examined signal, the lower and upper levels of the discriminator, and the output impulse of the discriminator are simultaneously displayed on a two-CRT oscillograph. The structural and functional characteristics of the discriminator and the display are examined. B.J.

A80-16472 # Determination of psychophysiological reaction norms of a pilot during work (Normirovanie psikhofiziologicheskikh reaktsii letchika v protsesse deiatel'nosti). E. A. Kozlovskii, V. F. Zhernavkov, and F. A. Zubets. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 58-60. In Russian.

The paper investigates the possibility of developing group norms for evaluating the psychophysiological reaction level of pilots. It is found that individual differences in response can best be taken into account through regression analysis of the relationships between the initial value of a given psychophysiological indicator and its value during flight. A method for indicating levels of pilot nervous and emotional stress is described. B.J.

A80-16473 # Method for generalizing operator performance factor evaluation in multidimensional tracking problems (Metodika obobshchennoi otsenki kachestva deiatel'nosti operatora v zadachakh mnogomernogo slezheniia). E. A. Kozlovskii and V. F. Zhernavkov. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 60-62. In Russian.

A80-16474 # Operator eye-movement reaction during tracking of discrete stimuli with random time and space distribution (Glazodvigatel'naia reaktsiia operatora pri slezhenii za diskretnymi stimulami so sluchainym vremennym i prostranstvennym raspredeleniem). V. G. Volkov, N. N. Lebedeva, and V. M. Mashkova. In: Psychophysical studies of human-operator activity and instrumentation for these studies. Moscow, Izdatel'stvo Nauka, 1979, p. 80-85. In Russian.

A80-16480 # Some aspects of processing physiological data (Nekotorye voprosy obrabotki fiziologicheskikh dannykh). E. P. Levchenko and T. C. Sidorenko. In: Computational mathematics, programming and experimental-data processing. Kiev, Izdatel'stvo Naukova Dumka, 1979, p. 81-96. 13 refs. In Russian.

Some aspects of processing and programming somato-autonomic indices are discussed. Particular attention is given to the elimination of artifacts from the electrocardiogram, correction of arterial pressure, and the identification of basic indices from the overall respiration process. V.P.

A80-16575 A possible mechanism for the influence of electromagnetic radiation on neuroelectric potentials. R. J. MacGregor (Colorado, University, Boulder, Colo.). *IEEE Transactions on Microwave Theory and Techniques,* vol. MTT-27, Nov. 1979, p. 914-921. 30 refs.

This paper explores the idea that the electrical component of applied microwave and radiowave radiation might induce transmembrane potentials in nerve cells and, thereby, disturb nervous function and behavior. The paper estimates the transmembrane currents and potentials induced in nerve cells by applied electrical fields and currents. Estimates are made for steady and for oscillating stimulation. The primary conclusion is that intracranial electrical fields associated with low-intensity irradiation in the frequency range of 1MHz to 10GHz may induce transmembrane potentials of tenths of millivolts (or more) and that, therefore, such externally applied fields may disturb normal nervous function through this mechanism. The paper also presents a discussion which indicates that the induced transmembrane potential should exhibit a maximum at about 100 MHz. Although some researchers suggest that the direct mechanism explored here may not represent the main influence of microwaves and radiowaves on biological tissue, this model together with a recent model by Barnes and Hu (1977) suggest that the results so produced may indeed be significant. (Author)

A80-16602 Mathematical model of respiratory rhythm generation. V. M. Nekrasova, P. I. Kuznetsov, and V. A. Safonov (II. Moskovskii Gosudarstvennyi Meditsinskii Institut, Moscow, USSR). *(Akademiia Nauk SSSR, Doklady,* vol. 245, Apr. 21, 1979, p. 1315-1318.) *Soviet Physics - Doklady,* vol. 24, Apr. 1979, p. 246-247. 5 refs. Translation.

An attempt is made to construct a mathematical model of the respiration center (in the medulla oblongata), capable of interpreting the principal adaptive reactions of the respiration center in the generation of the respiration rhythm. The model is based on Nekrasov and Safonov's (1973) classification of respiration neurons and on Posin and Shul'pin's (1970) isolated-neuron model. V.P.

A80-16793 Time-resolved spectrometry of in vivo firefly bioluminescence emissions. J. D. Barry (USAF, Space and Missile Systems Organization, Los Angeles, Calif.), J. M. Heitman, and C. R. Lane (USAF, Avionics Laboratory, Wright-Patterson AFB, Ohio). *Journal of Applied Physics,* vol. 50, Nov. 1979, pt. 1, p. 7181-7185. 10 refs.

The optical emissions of in vivo bioluminescence pulses have been evaluated by time-resolved spectrometry for the first time. The firefly Photinus pyralis (Linnaeus) (Coleoptera: Lampyridae) was used as the test specimen. The time-resolved spectrometry has allowed evaluation of the intrapulse characteristics as well as those of the overall envelope. The light pulses were found to last 0.3-0.4 sec, have a nonsymmetrical wavelength envelope, have an emission peak near 585 nm, have apparently continuous emission over the interval 500-720 nm, emit a power of the order of 1 x 10 to the -6 W/pulse and have an intrapulse peak wavelength shift to shorter wavelengths during the pulse period. Time-resolved spectrometry is recommended for intrapulse evaluation of other bioluminescence systems. (Author)

A80-17054 * Motion sickness susceptibility during rotation at 30 rpm in free-fall parabolic flight. A. Graybiel (U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, Fla.). *Acta Astronautica,* vol. 6, Nov. 1979, p. 1481-1487. 6 refs. NASA Order T-9140-E.

To make comparisons with experimental motion sickness susceptibility in Skylab missions, subjects were tested during free fall in parabolic flight and in ground-based simulation tests. They were rotated at 30 rpm in a rotating litter chair (RLC) with head fixed, head swiveling left-to-right, or with 90 degree forward and return head and body movements. Stressful accelerations similar to those in the Skylab RLC were generated only in the tests aloft, where subjects who made 'forward and return' movements (generating cross-coupled angular accelerations) were substantially more prone to motion sickness than those with either head fixed or head swiveling left-to-right. However, with head swiveling, susceptibility was slightly higher in the laboratory than aloft. J.P.B.

A80-17059 # Binocular and monocular stimuli for motion in depth - Changing-disparity and changing-size feed the same motion-in-depth stage. D. Regan and K. I. Beverley (Dalhousie University, Halifax, Nova Scotia, Canada). *Vision Research,* vol. 19, no. 12, 1979, p. 1331-1342. 30 refs. National Research Council of Canada Grant No. A-0323; Grant No. AF-AFOSR-78-3711.

Although changing-size stimulation and changing-disparity stimulation can both produce a sensation of motion in depth, they act largely independently. The motion-in-depth sensation produced by changing-size can be cancelled by antagonistic changing-disparity stimulation. Again, a motion-in-depth aftereffect built up by inspecting a changing-size stimulus can be nulled either by changing-size stimulation or by changing-disparity stimulation. The relative effectiveness of changing-disparity and changing-size as stimuli for motion-in-depth sensation varies as follows: (1) changing disparity grows relatively more effective as velocity increases (according to a power law); (2) changing disparity grows relatively more effective as inspection time increases; (3) changing disparity grows relatively more effective as the linear horizontal width of the target decreases;

(4) the relative effectiveness of changing disparity and changing size shows marked intersubject variability (at least 80:1). But relative effectiveness does not depend on viewing distance except at very short ranges. (Author)

A80-17060 **Processing of direction and magnitude by the saccadic eye-movement system.** R. L. Hou and D. H. Fender (California Institute of Technology, Pasadena, Calif.). *Vision Research,* vol. 19, no. 12, 1979, p. 1421-1426. 9 refs. Grants No. NIH-NS-03627; No. NIH-RR-07003.

The function of the saccadic programming system has been studied using a doublestep target movement in two dimensions. The results of these experiments suggest the following hypotheses. The information processing in the programming of a saccade consists of direction computation and magnitude computation. If the new target-step arrives before the direction computation of the previous saccade is complete, this saccade will be cancelled. The partial program concerning the direction of the saccade is kept in a buffer memory; if the direction of the new saccade is not in a direction similar to the old one, this partial program has to be erased, which takes an extra 40-80 msec of processing time. There is a stage in which the direction of the saccade cannot be reprogrammed but the magnitude can still be reduced. In other words, the magnitude computation seems to finish after the direction computation. If the new target-step arrives after the computation of both direction and magnitude are complete, two full saccades will be observed. (Author)

A80-17067 **Evaluation of heat convection and flow front influence on electrophoresis of biological substances in space flight conditions.** V. R. Sharipova. *International Astronautical Federation, International Astronautical Congress, 30th, Munich, West Germany, Sept. 17-22, 1979, Paper 79-ST-17.* 10 p.

The paper deals with a few mathematical simulation problems of continuous flow electrophoresis during space flight, by taking the convection that occurs at that time into account. A qualitative study of the influence of convection in continuous-flow electrophoresis is made by employing a nonelliptic eddy system. It is shown that it is possible to carry out a parameter analysis of agent input coordinates from the given model on electrophoretic separation accuracy. C.F.W.

A80-17100 **Radiation dose rate of a biological object from cosmic rays in the stratosphere and at the height of artificial earth satellites.** N. G. Skriabin, Iu. G. Shafer, and I. I. Sosin. *(Kosmicheskie Issledovaniia,* vol. 17, May-June 1979, p. 478, 479.) *Cosmic Research,* vol. 17, no. 3, Nov. 1979, p. 397, 398. 7 refs. Translation.

The dose rate of cosmic ray radiation absorbed by a living organism in the stratosphere and at an altitude of 350 km has been estimated. The dose rate expended in ionization in the organism has also been determined. The equivalent dose rate absorbed at altitudes of 12 and 21 km at auroral latitudes is expected to be 0.71 and 1.56 mrem/hr, respectively. Assuming a geomagnetic rigidity of 1-10 GeV/sec, the calculated equivalent dose absorbed at an altitude of 350 km is 0.73 + or - 0.23 mrem/hr. C.K.D.

A80-17262 # **Vertical stabilization of a quadriped walking machine (Vertikal'naia stabilizatsiia chetyrekhnogogo shagaiushchego apparata).** B. A. Bordiug (Akademiia Nauk Ukrainskoi SSR, Institut Matematiki, Kiev, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 43, 1979, p. 37-48. 6 refs. In Russian.

Aspects of stabilizing a quadriped walking machine with weightless legs are discussed with emphasis on the synthesis of a vertical stabilization algorithm. General equations of motion and their linearized variants are obtained for the machine. The vertical stabilization problem is then treated as one of periodic-system optimization in an infinite time interval on the basis of a quadratic performance criterion. B.J.

A80-17285 # **Active responses of the internal carotid artery to stretching (Ob aktivnykh reaktsiiakh vnutrennei sonnoi arterii na rastiazhenie).** V. A. Mamisashvili, G. I. Mchedlishvili, and L. G. Ormotsadze (Akademiia Nauk Gruzinskoi SSR, Institut Fiziologii, Tiflis, Georgian SSR). *(Vsesoiuznaia Konferentsiia po Problemam Biomekhaniki, Riga, Latvian SSR, Apr. 1979.) Mekhanika Kompozitnykh Materialov,* Sept.-Oct. 1979, p. 873-877. 9 refs. In Russian.

The role of the myogenic mechanism in the regulation of cerebral circulation under variable systemic arterial pressure is examined. In vitro data obtained by various investigators for isolated segments of vascular smooth muscles are extrapolated to the actual intravascular pressure. It is shown that myogenic responses of the internal carotid artery are capable of providing only partial regulation of cerebral circulation at variable arterial pressure in the case of pronounced and rapid variation of intravascular pressure. V.P.

A80-17288 # **In vivo investigation of the elastohysteresis properties of the aorta and its branches (Prizhiznennoe izuchenie uprugogisterezisnykh svoistv aorty i ee vetvei).** V. P. Pirogov, V. D. Ivanova, N. A. Volkov, Iu. Iu. Zhuravlev, and M. I. Kyz'min (Kuibyshevskii Meditsinskii Institut; Kuibyshevskii Aviatsionnyi Institut, Kuibyshev, USSR). *(Vsesoiuznaia Konferentsiia po Problemam Biomekhaniki, Riga, Latvian SSR, Apr. 1979.) Mekhanika Kompozitnykh Materialov,* Sept.-Oct. 1979, p. 933-937. In Russian.

The method proposed in the present paper for calculating arterial flows is based on substituting ordinary linearized differential equations for the partial differential equations. A solution is obtained for the first harmonic of the volumetric flow rate. Good qualitative agreement of the model with the experiment is demonstrated. V.P.

NUMERICAL SOLUTION OF A HYPERBOLIC SYSTEM OF CONSERVATION LAWS FOR BLOOD FLOW IN THE ARTERIAL TREE Ph.D. Thesis
David Moise Bellehsen 1979 130 p
Avail: Univ. Microfilms Order No. 7925440

A code for an arbitrary arterial tree was developed that can accommodate any prescribed physiological data. The partial differential equations which describe the flow of blood in the cardiovascular system are nonlinear. The flow is treated as one-dimensional. The equations form a hyperbolic system of conservation laws which are solved by the Lax-Wendroff method. Special cases of one branch and three branches were worked out numerically and analytically with computed results in the form of tables. As an application, a structured arterial tree was studied and some graphs are presented. The effect of varying the reflection coefficient is also discussed. Dissert. Abstr.

HUMAN MUSCLE FIBER TYPES IN POWER LIFTERS, DISTANCE RUNNERS AND UNTRAINED SUBJECTS: A HISTOCHEMICAL AND ULTRASTRUCTURAL STUDY Ph.D. Thesis
Frederick Paul Prince 1979 39 p
Avail: Univ. Microfilms Order No. 7924429

Cellular aspects (fiber size and qualitative measures of contraction time and aerobic capacity via histochemistry) and sub-cellular (morphometric analysis of mitochondrial volume percent, lipid volume percent and Z-line width via electron microscopy) aspects of the vastus lateralis muscle, a major extensor of the knee joint, in male and female athletes and non-athletes were investigated. The cross-sectional area and metabolic profile was obtained for each fiber. The fibers were thus classified as slow-twitch-oxidative, fast-twitch-oxidative-glycolytic, and fast-twitch-glycolytic. Much individual variation is present in the percentages of histochemical fiber types and fiber cross-sectional area. Male and female fibers are similar in most respects. The major difference being that all 3 fiber types appear larger in males. Dissert. Abstr.

STATISTICAL REPRESENTATION OF ELECTROCARDIOGRAPHIC BODY SURFACE MAPS FOR FEATURE IDENTIFICATION DATA COMPRESSION AND CLASSIFICATION Ph.D. Thesis
Arnold Kerry Evans 1979 96 p
Avail: Univ. Microfilms Order No. 7924352

The development and evaluation of methods for providing accurate representation of ECG body surface potential map data are discussed. Identifying diagnostically important map features, providing data compression, and forming a basis for applying statistical pattern recognition techniques to map classification are studied. Dissert. Abstr.

N80-12729 Michigan Univ., Ann Arbor.
A POSTURAL MEASUREMENT SYSTEM FOR INDUCED BODY SWAY ASSESSMENT Ph.D. Thesis
Robert Owens Andres 1979 162 p
Avail: Univ. Microfilms Order No. 7925105

A microcomputer based stimulus delivery and response measurement system for the analysis of human sagittal plane body sway response to induced instabilities was developed. The system is called a postural measurement system (PMS). The PMS provides flexibility in stimulus delivery while assessing postural sway responses with known resolution. The PMS was implemented in a predesigned factorial experiment investigating both static and induced sinusoidal body sway responses of one healthy young male subject; PMS performance was monitored concurrently with the human sway responses. The spectrum of antero-posterior body sway during quiet stance was non-adaptive over the 45 minute test session. The waist swayed less than the shoulders; most sway displacement had frequency components less than .4 Hz. The lumbosacrum did not remain rigid during static sway as inverted pendulum body models assume. Dissert. Abstr.

SIMULTANEOUS MUSCLE FORCE AND DISPLACEMENT TRANSDUCER Patent Application
Cyril Feldstein (JPL), Gilbert W. Lewis (JPL), and Virgil H. Culler, inventors (to NASA) (JPL) Filed 30 Sep. 1977 12 p Sponsored by NASA
(NASA-Case-NPO-14212-1; US-Patent-Appl-SN-838308) Avail: NTIS HC A02/MF A01 CSCL 06B

A myocardial transducer for simultaneously measuring force and displacement within a very small area of myocardium is presented. Each branch of the forked transducer constitutes a low compliance tine for penetrating the heart. When the heart is penetrated, the surface membrane closes around indentations in the tines. A small piezoresistive element that converts a force into an electrical signal is bonded to one of the low compliance tines. A third high compliance tine is of a length that just pierces the surface membrane. Displacement of the myocardium in a direction in line with the two low compliance tines causes a deformation in curvature of the high compliance tine that is converted into an electrical signal by a second piezoresistive element. An electrode placed on the epicardium and referenced to the transducer provides an ECG with force and displacement measurements. NASA

DESIGN OF A MICROPROCESSOR BASED CARDIOTACHOMETER
D. Ratino, G. Potor, A. Marko, and C. Sharper Apr. 1979 39 p refs
(AF Proj. 6893)
(AD-A073105; AMRL-TR-79-21) Avail: NTIS HC A03/MF A01 CSCL 09/2

A microprocessor based cardiotachometer has been designed and fabricated in-house using 8080 Intel microcomputer hardware and assembly language software. The cardiotachometer accurately calculates and digitally displays beat-by-beat heart rate in beats per minute. The design incorporates standard semiconductor memory and I/O integrated circuits. Operational understanding does not require extensive microprocessor design background. In fact, the cardiotach's design provides excellent basic information in the use of microprocessors in the instrumentation field. GRA

DETECTION OF DIFFERENT TARGET TYPES IN REALISTIC TERRAIN Interim Report, Sep. 1978 - Jan. 1979
G. E. Corrick Mar. 1979 42 p refs
(Contract N60530-78-C-0240)
(AD-A072973; HAC-FR-79-27-676; HAC-Ref-E3900; NWC-TP-6107) Avail: NTIS HC A03/MF A01 CSCL 17/8

The effects of target and terrain characteristics on visual air-to-ground target acquisition were studied. Five target types--a portable bridge; a portable bridge with adjacent anti-aircraft artillery (AAA); a surface-to-air missile (SAM) site; a petroleum, oil, and lubricants (POL) supply dump; and a group of three tanks--were embedded into oblique aerial photos of real terrain at a simulated slant range of 1.6 km. Background scenes were selected to represent desert, desert/mountain, and rural terrain. Results of a search experiment showed that target type was the most important factor in determining acquisition performance, accounting for up to 40% of the experimental variance. The relative detectabilities of the target were found to group so that the bridge alone, the bridge with AAA site, and the SAM site were significantly easier to detect than the three tank group or POL site. Results are discussed in terms of the detectability of a target as related to the constraints on its possible scene location. Background was shown to be a significant effect, but accounted for about one-fourth as much of the variance as did target type. These results are compared to a previous similar study using multiple configurations of a single target type where background characteristics were shown to account for more variance. Implications for target acquisition modeling are discussed. GRA

RATIONAL WAYS TO INCREASE PICTOGRAPHIC SYMBOL DISCRIMINABILITY Ph.D. Thesis
Paul Allan Green 1979 237 p
Avail: Univ. Microfilms Order No. 7925156

Several ways of increasing the discriminability of similar symbols were compared. Six alterations were considered: five modifications of symbol elements (changes in height to width ratio, strokewidth, rotation in the frontal plane, repetition, and filling in an enclosed area) and substitution of a new symbol (new prototype) for one member of a confusable pair. The last four changes were compared. To determine the effect of including confusable pairs of symbols in larger sets, symbols for several controls and displays (heater, air conditioner, vent, radio volume and tuning, exterior-lamp failure, and tire pressure) were developed. Suggestions for those symbols were drawn by 43 drivers in experiment two. Based on those drawings were several candidate symbols for each function. In the third experiment 62 drivers made magnitude estimates of how well each candidate's intended meaning was understood. From these data and existing standards a set of eight symbols was assembled. Dissert. Abstr.

EVALUATION AND COMPARISON OF ALTERNATIVE DESIGNS FOR WATER/SOLID-WASTE PROCESSING SYSTEMS FOR SPACECRAFT Final Report
J. M. Spurlock Jul. 1975 135 p refs
(Contract NASw-2439)
(NASA-CR-162492) Avail: NTIS HC A07/MF A01 CSCL 06K

Promising candidate designs currently being considered for the management of spacecraft solid waste and waste-water materials were assessed. The candidate processes were: (1) the radioisotope thermal energy evaporation/incinerator process; (2) the dry incineration process; and (3) the wet oxidation process. The types of spacecraft waste materials that were included in the base-line computational input to the candidate systems were feces, urine residues, trash and waste-water concentrates. The performance characteristics and system requirements for each candidate process to handle this input and produce the specified acceptable output (i.e., potable water, a storable dry ash, and vapor phase products that can be handled by a spacecraft atmosphere control system) were estimated and compared. Recommendations are presented. R.E.S.

SOME MODELS OF HUMAN ERROR FOR MAN-MACHINE SYSTEM EVALUATION Final Technical Report, 1 Jul. 1977 - 30 Dec. 1978
Marlin U. Thomas 15 May 1979 32 p refs Prepared in cooperation with Chrysler Corp., Detroit and Michigan Univ., Ann Arbor
(Contract N00014-77-C-0587)
(AD-A072838; TR-79-5) Avail: NTIS HC A03/MF A01 CSCL 05/8

A framework is presented for quantifying and modeling the occurance of human error events in a system. Decision tasks are classified according to the stochastic behavior of the relevant variables associated with the man-machine linkages. A general semi-Markov formulation is presented for describing transitions among error states. Closed form results for the time-between-errors are given through transform relationships for the case where interdecision times form a renewal process. An approximate time-between-error distribution is given that provides computational ease and compared well with some experimental data obtained from a laboratory human decision-making task. GRA

PHOTOSYNTHETIC CARBON REDUCTION BY SEAGRASSES EXPOSED TO ULTRAVIOLET A RADIATION Final Report
15 Sep. 1979 38 p refs
(Contract NAS9-15846)
(NASA-CR-160397) Avail: NTIS HC A03/MF A01 CSCL 06C

The seagrasses Halophila engelmannii, Halodule wrightii, and Syringodium filiforme were examined for their intrinsic sensitivity to ultraviolet-A-UV-A and ultraviolet-B-UV-B radiation. The effect of UV-A on photosynthetically active radiation (PAR) was also determined. Ultraviolet-A and ultraviolet-B were studied with emphasis on the greater respective environmental consequence in terms of seagrass distribution and abundance. Results indicate that an intrinsic sensitivity to UV-A alone is apparent only in Halophila, while net photosynthesis in Halodule and Syringodium seems unaffected by the level of UV-A provided. The sensitivity of Halophila to UV-A in the absense of (PAR) indicates that the photosynthetic reaction does not need to be in operation for damage to occur. Other significant results are reported. R.C.T.

SYSTEM PARAMETERS FOR ERYTHROPOIESIS CONTROL MODEL: COMPARISON OF NORMAL VALUES IN HUMAN AND MOUSE MODEL
15 Dec. 1979 29 p refs
(Contract NAS9-15487)
(NASA-CR-160401; TIR-741-LSP-8024) Avail: NTIS HC A03/MF A01 CSCL 06C

The computer model for erythropoietic control was adapted to the mouse system by altering system parameters originally given for the human to those which more realistically represent the mouse. Parameter values were obtained from a variety of literature sources. Using the mouse model, the mouse was studied as a potential experimental model for spaceflight. Simulation studies of dehydration and hypoxia were performed. A comparison of system parameters for the mouse and human models is presented. Aside from the obvious differences expected in fluid volumes, blood flows and metabolic rates, larger differences were observed in the following: erythrocyte life span, erythropoietin half-life, and normal arterial pO2. R.E.S.

DETERMINING BIOLOGICAL FINE STRUCTURE BY DIFFERENTIAL ABSORPTION OF SOFT X-RAY
B. J. Panessa-Warren and J. B. Warren (BNL) Jun. 1979 23 p refs Presented at the Conf. on Ultrasoft X-Ray Microscopy, N.Y., 13 Jun. 1979 Submitted for publication
(Contract EY-76-C-02-0016)
(BNL-26282; CONF-790674-3) Avail: NTIS HC A02/MF A01

The use of soft X-ray contact microscopy in examining histo-chemically treated human tissue embedded in plastic and exposed as unstained thin sections is demonstrated. Preliminary data revealed that the histochemical reaction product, and the unstained biological fine structure of the surrounding tissues can be clearly imaged. Hydrated proteoglycan aggregates were examined. Proteoglycans are an essential component of the organic matrix of cartilage, and play a primary role in the retention and maintenance of extracellular water. To avoid any artifacts due to the introduction of exogeneous materials, and examine the proteoglycan aggregates in their hydrated, natural configuration, contact X-ray images of isolated proteoglycan aggregates in water were made. THE EFFECTS OF CONTEXT ON THE STRUCTURE OF PAIN Ph.D. Thesis
Mark Harold Bradshaw 1979 138 p
Avail: Univ. Microfilms Order No. 7924603

Multidimensional scaling (MDS) was used to determine whether the structure of a set of pain descriptors varied as a function of the area of the body to which those descriptors referred. Three body areas (head, arms and legs, and torso) were chosen, and a set of 13 words were found which were judged by subjects to be highly applicable to the description of pain in all three body areas. These words, plus a few body-area-specific words, were used as stimuli in four MDS studies. In each of the studies pain descriptors were judged in the context of a specific body area. It was concluded that differences in the structure of the pain descriptors across different body areas were minimal to nonexistant. Thus, this research supports the view that a single taxonomy of pain descriptors can represent the major pain qualities in different parts of the body and that MDS is a good method for establishing such a taxonomy. Dissert. Abstr.

MODELING STUDIES OF THE PRESSURE-FLOW RELATIONSHIP OF THE CENTRAL AIRWAYS Ph.D. Thesis
David Burkman Reynolds 1978 249 p
Avail: Univ. Microfilms Order No. 7928032

The spacing of junctions that control the pressure flow relation of the bronchial tree was investigated. A mathematical model simulating these relations was developed. Airway models included single bifurcations, bifurcating networks, and a latex airway reproduction of a dog lung. The total flow rate of water and aqueous solutions of sucrose and sodium carboxymethyl cellulose and the static pressure at selected locations of the airway models was measured for steady and unsteady, inspiratory, and expiratory flow corresponding to tracheal Reynolds number in the range 1000-10,000. A dimensionless form of the Rohrer equation was used to simulate the data and to partition the total loss into that of an individual bifurcation. By appropriate sealing relationships, the results with aqueous solutions were extended to the flow of air. Dissert. Abstr.

DEVELOPMENT AND DESCRIPTION OF A DEVICE FOR STATIC STRENGTH MEASUREMENT IN THE ARMED FORCES EXAMINATION AND ENTRANCE STATION

Joseph Knapik, Dennis Kowal, Patrick Riley, James Wright, and Michael Sacco 9 Jan. 1979 44 p refs
(AD-A068684; USARIEM-T-2/79) Avail: NTIS HC A03/MF A01 CSCL 06/14

A device for muscular strength measurement designed for possible use in the AFEES is presented. Muscle groups involving the upper body, legs and trunk, were selected for measurement as being most representative of the functional muscle groups most relevant to the Army's needs. The isometric (static) mode of testing was selected due to its simplicity of administration, reliability and reduced susceptibility to motivational influences. Biomechanical factors including subject-machine couplings, anatomical angles and minimization of synkinetic movement patterns are considered. The apparatus and calibration techniques are described. Standardized postures, anatomical angles and instructions are included. Reliability coefficients of 0.97, 0.92 and 0.83 were obtained for the upper body, legs and trunk respectively. Descriptive statistics and histograms for a representative population are included. GRA

RELIABILITY, VALIDITY AND APPLICATION OF AN IMPROVED SCALE FOR ASSESSMENT OF MOTION SICKNESS SEVERITY Final Report, Apr. 1978 - May 1979
S. F. Wiker, R. S. Kennedy (Naval Aviation Med. Res. Lab., New Orleans), M. E. McCauley (Human Performance Res., Inc., Goleta, Calif.), and R. L. Pepper (Naval Ocean Systems center, Kaila, Hawaii) May 1979 29 p refs
(AD-A069130; USCG-D-29-79) Avail: NTIS HC A03/MF A01 CSCL 06/5

Three sea going vessels steamed side-by-side through slight seas off the coast of Oahu, Hawaii. A four-hour octagon was transmitted twice each day for three consecutive days while motion sickness symptomatology was recorded from eighteen enlisted men who alternated among the vessels. Dramatic differences in illness severity were obtained, whether comparisons were made using objective evidence of vomiting episodes, or subjective reporting of symptoms on questionnaires. Reliability of this scoring method was excellent ($r = .95$). In addition to face and construct validity, evidence is presented of the predictive validity of the scoring method in a separate octogonal steaming experiment, using a 95 ft Coast Guard Patrol Boat in an equivalent experimental paradigm. This study showed significant covariance between the magnitude of motion sickness symptomatology and the encounter direction of the vessel to the primary swell ($p < .01$). Additional significant correlations were found between sickness severity and test subject concentration, fatigue, urine production and urine specific gravity. The majority of these relationships would not have been disclosed had only the dichotomous criterion of vomit/nonvomit been employed in assessing motion sickness severity. Implications of these data as design criteria for marine vehicles are discussed. GRA

EFFECTS OF IONIZING RADIATION ON THE LIGHT SENSING ELEMENTS OF THE RETINA Ph.D. Thesis
Michael J. Malachowski Jul. 1978 236 p refs
(Contract W-7405-eng-48)
(LBL-5683) Avail: NTIS HC A11/MF A01

Morphological and physiological effects of particles of high linear energy transfer on the retina, in comparison with X-ray effects were investigated. The particles used were accelerated atomic nuclei of helium, carbon, and neon at kinetic energies of several hundred MeV/nucleon. For morphological studies, scanning and transmission electron microscopy and light microscopy were used. Physiological studies consisted of autoradiographic data of the rate of incorporation of labeled protein in the structures (opsin) of the outer segment of visual cells. Structural changes were found in the nuclei, as well as the inner and outer segments of visual cells, rods and cones. At a low of dose of 10 rad, X-ray and helium had no statistically significant morphological effects, but carbon and neon beams did cause significant degeneration of individual cells, pointing to the existence of a linear dose effect relationship. Other significant results are reported. DOE

APPARATUS FOR MEASUREMENT OF TISSUE COMPLIANCE Final Report
Wolfgang Gerhard, Wolfgang Hepp, and Karl-Frieder Sahm Bonn Bundesmin. fuer Forsch. u. Technol. Nov. 1978 60 p refs In GERMAN; ENGLISH summary
(Contracts BMFT-WRT-1076; DFVLR-BPT-01-00-096)
(BMFT-FB-W-78-05) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 12,60

It is supposed that the compliance of tissues under weightlessness produces changes in the distribution of fluids in the tissues which can be observed in space. These changes give rise to changes in the tissue thickness; analogous thickness variations can be produced by application of external pressure to tissue. A concept for measuring these variations in tissue thickness is studied. After a critical analysis of the experimental situation, possible procedures for thickness measurement are discussed. As a suitable procedure, an ultrasonic echo method was chosen which works with impulses similar to shock waves. For the application of pressure to the tissue a special pressure chamber was developed. Problems connected with coupling of the chamber and the ultrasonic probe to the tissue surface were solved. A laboratory test of the measuring equipment gives results which are reproducible and of adequate precision. Author (ESA)

EFFECT OF NOISE SPECTRA AND A LISTENING TASK UPON PASSENGER ANNOYANCE IN A HELICOPTER INTERIOR NOISE ENVIRONMENT
Sherman A. Clevenson and Jack D. Leatherwood Dec. 1979 26 p refs
(NASA-TP-1590; L-13233) Avail: NTIS HC A03/MF A01 CSCL 05I

The effects of helicopter interior noise on passenger annoyance were studied. Both reverie and listening situations were studied as well as the relative effectiveness of several descriptors (i.e., overall sound pressure level, A-weighted sound pressure level, and speech interference level) for quantifying annoyance response for these situations. The noise stimuli were based upon recordings of the interior noise of a civil helicopter research aircraft. These noises were presented at levels ranging from approximately 68 to 86 dB(A) with various gear clash tones selectively attenuated to give a range of spectra. Results indicated that annoyance during a listening condition is generally higher than annoyance during a reverie condition for corresponding interior noise environments. Attenuation of the planetary gear clash tone results in increases in listening performance but has negligible effect upon annoyance for a given noise level. The noise descriptor most effective for estimating annoyance response under conditions of reverie and listening situations is shown to be the A-weighted sound pressure level. R.E.S.

ANALYSIS OF METABOLIC ENERGY UTILIZATION IN THE SKYLAB ASTRONAUTS
J. I. Leonard 19 Dec. 1977 97 p
(Contract NAS9-14523)
(NASA-CR-160402; TIR-741-MED-7018) Avail: NTIS HC A05/MF A01 CSCL 05H

Skylab biomedical data regarding man's metabolic processes for extended periods of weightlessness is presented. The data was used in an integrated metabolic balance analysis which included analysis of Skylab water balance, electrolyte balance, evaporative water loss, and body composition. A theoretical analysis of energy utilization in man is presented. The results of the analysis are presented in tabular and graphic format. R.E.S.

SKYLAB WATER BALANCE ERROR ANALYSIS
J. I. Leonard 5 May 1977 39 p refs
(Contract NAS9-14523)
(NASA-CR-160403; TIR-782-LSP-7006) Avail: NTIS HC A03/MF A01 CSCL 05H

Estimates of the precision of the net water balance were obtained for the entire Skylab preflight and inflight phases as well as for the first two weeks of flight. Quantitative estimates of both total sampling errors and instrumentation errors were obtained. It was shown that measurement error is minimal in comparison to biological variability and little can be gained from improvement in analytical accuracy. In addition, a propagation of error analysis demonstrated that total water balance error could be accounted for almost entirely by the errors associated with body mass changes. Errors due to interaction between terms in the water balance equation (covariances) represented less than 10% of the total error. Overall, the analysis provides evidence that daily measurements of body water changes obtained from the indirect balance technique are reasonable, precise, and relaible. The method is not biased toward net retention or loss. R.E.S.

ANTI-SUFFOCATION VALVE BENDIX TYPE NO. 3267010-0101 Final Report
J. Mientus, R. Cramer, and J. Dunbar 16 Apr. 1979 26 p refs
(Contract N62269-76-C-0214)
(AD-A068927; NADC-79010-60) Avail: NTIS HC A03/MF A01 CSCL 06/11

The oxygen supply currently located in the RSSK (Rigid Seat Survival Kit) provides the aircrew member with an emergency source of oxygen in the event of an in-flight failure of the aircraft oxygen system, during parachute descent, or in the event of aircraft ditching. An inherent danger in the system is the suffocation of an unconscious aircrew member who cannot remove his mask in the event the emergency oxygen supply becomes depleted or is malfunctioning. The protection envelope currently provided the aircrew member will be greatly enhanced through the incorporation of an anti-suffocation valve, providing the capability of breathing ambient air when oxygen from the emergency supply is no longer available. The valve overcomes the danger of an aircrew member unknowingly breathing air during normal in-flight operation, and prevents the entrance of water during an underwater or flotation condition. GRA

SPACELAB ENVIRONMENT INVESTIGATION BY MASS SPECTROMETER Final Report
Gunther Kupfahl and Rolf Maisch Bonn Bundesmin. fuer Forsch. u. Technol. Nov. 1978 70 p refs In GERMAN; ENGLISH summary
(Contracts BMFT-WRT-1075; DFVLR-BPT-01-00-016)
(BMFT-FB-W-78-02) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 14,50

The aptness of the extremely clean environment onboard Spacelab to scientific and technological experimentation is considered. The limitations of this cleanliness due to leakage and outgassing from the Shuttle-Spacelab system are defined. Contamination control, mandatory for certain missions, is described. The use of mass spectrometers, being best suited to this purpose, as measuring instruments is recommended. Type and preliminary specifications for this equipment are given. It is pointed out that this instrument can be used simultaneously for aeronomic research, because the undisturbed and contaminated atmosphere can be separated by an energy discriminator. A set of control mechanisms is suggested to cover at least one halfsphere of the space around is Spacelab. Author (ESA)

A FIELD OF VIEW SIMULATOR EQUIPPED FOR PERSPECTIVE TRANSFORMATION ON A TELEVISION RASTER [EIN SICHTSIMULATOR MIT PERSPEKTIVISCHER VERZEICHNUNG DES RASTERS VON FERNSEHBILDERN]
H. Heising Dec. 1977 78 p refs In GERMAN; ENGLISH summary
(FB-34) Avail: NTIS HC A05/MF A01; Forschungsinst. fuer Anthropotech., Meckenheim, West Ger. DM 10

For ergonomical investigations of visual simulation problems a system which simulates the outside visual environment as seen by an aircraft pilot was developed. Television technology was used for storage and display of moving images because of its low cost and technical maturity. High accuracy and fast computation requirements are accomplished with a specially built analog computing network which is described in detail. This visual simulation technique is applicable to a wide range of tasks and visual situations in which perspective transformations of images are desired. Author (ESA)

ON THE OPTIMIZATION OF SPRING ELASTICITY, DAMPING, AND INERTIA EFFECTS ON THE SPRING LOADING OF A CONTROL STICK [ZUR OPTIMIERUNG VON FEDER-, DAEMPFUNGS- UND MASSEANTEILEN BEIM BEWEGUNGSWIDERSTAND EINES LENKKNUEPPELS]
W. Krueger May 1978 41 p refs In GERMAN; ENGLISH summary
(FB-37) Avail: NTIS HC A03/MF A01; Forschungssinst. fuer Anthropotech., Meckenheim, West Germany DM 10

In manual control the performance of the human operator can be influenced by the design of controls. Deflection-resistance characteristics are of special interest due to the movement resistance of the control. In order to investigate several reaction forces of a joystick, a series of experiments was conducted. The optimal control forces as a combination of spring force (0, 1, 2, 3.5 N/cm) viscous damping (0, 0.2, 0.35 N/cm/sec), and inertia (0, 2 kg) were obtained. A second and third order tracking task (simplified longitudinal and lateral dynamics of an airplane) was used. Results show that only spring force (1.0 to 3.5 N/cm), can improve tracking performance. Damping and inertia effects were negative using a low spring stiffness of 1.0 N/cm. Self adjusted stiffness by well trained subjects was 1.7 N/cm. Author (ESA)

A COMPARISON OF CONTROL SIMULATORS HAVING FORCE INPUTS AND DISPLACEMENT FEEDBACK. APPLICATIONS TO THE MANUAL CONTROL OF UNDERWATER VEHICLES [UNTERSUCHLING EINES BEDIENELEMENTS MIT KRAFTEINGABE UND WEGRUECKMELDUNG BEI DER MANNELLEN LENKUNG VON UNTERWASSERFAHRZEUGEN]
H. E. Boller and W. Krueger May 1978 32 p refs In GERMAN; ENGLISH summary
(FB-38) Avail: NTIS HC A03/MF A01; Forschungsinst. fuer Anthropotech., Meckenheim, West Germany DM 10

In manual control, human operator performance can be improved by kinesthetic feedback of vehicle dynamic behavior. In a low-frequency system, the advantage of kinesthetic feedback may be reduced by slow system reactions. Two different single axis control yokes, each with the functional capability of either pure displacement inputs of force input with a displacement feedback as a kinesthetic display of vehicle response were compared. Eight subjects were used in controlling a simulated submarine while making several changes in depth. Results did not support a preference for the force yoke with a displacement

feedback. It is recommended not to use this type of control device in steering such a one-axis low-frequency system.

ON THE PROBLEM OF SPRING LOADED RESISTANCE TO SIMPLE AND COMPLEX POSITIONING OF A CONTROL STICK [ZUM PROBLEM DES BEWEGUNGS- WIDERSTANDS BEI EINFACHEN UND KOMPLEXEN STELLBEWEGUNGEN DES ARMES]

G. Rothbauer Oct. 1978 150 p refs In GERMAN, ENGLISH summary
(FB-40) Avail: NTIS HC A07/MF A01; Forschungsinst. fuer Anthropotech., Meckenheim, West Germany DM 10

To provide good proprioceptive feedback in a manual control device for a designation task, spring resistance of a joystick was optimized by using the psychophysical method of cross modality matching. Designation with zero and first order systems showed that the coarse adjustment was insensitive to stick and certain task parameters, although it was influenced by some biomechanical parameters and the anticipated demands of the final control positioning. Only the more difficult fine adjustment is sensitive to parameter alteration and therefore suitable for optimization attempts. The strong centering of the stick by nonlinear degressive spring resistance facilitates fine adjustment. Through this, total adjustment time with the first order system is reduced by more than 30%, compared to a linear resistance. Tracking experiments confirm the usefulness and preference of nonlinear spring resistance.

THE AUTOMOBILE DRIVING SIMULATOR FOR ANTHROPOGENIC RESEARCH

E. Donges Jul. 1978 48 p refs In GERMAN; ENGLISH summary uft der fahrsimulator des forschungsinstituts fuer anthropotechnik
(FB-41) Avail: NTIS HC A03/MF A01; Forschungsinst. fuer Anthropotech., Meckenheim, West Germany DM 10

The setup of a driving simulator which is used for the investigation of human behavior in guiding motor vehicles is described. The front part of a fully equipped car body serves as a mock-up for the driver. The simulation of lateral and longitudinal vehicle dynamics is based on simplified motion equations and characteristics implemented on a digital process computer. An electronic visual outside world simulation generates a synthetic, central perspective view of a two lane road according to vehicle motions. The driving noise is composed of simulated engine, tire, and wind noise. The simulator mock-up can be rotated in degrees of freedom (roll and pitch) by an electro-hydraulic servosystem. Steering wheel forces are provided by an electromechanical servosystem corresponding to a static characteristic with hysteresis. The data transfer between the simulator components, the simulation mode control, and data acquisition is coordinated by a digital process computer which also solves the dynamic equations of vehicle motion in real time.

ON THE INTERACTION BETWEEN SYSTEM AND TASK PARAMETERS THROUGH CONTINUOUS MANUAL CONTROL [INTERAKTION VON SYSTEM- UND AUFGABENPARAMETERN BEI KONTINUIERLICHER MANUELLER REGFLUNG]

G. Rothbauer Mar. 1979 39 p refs In GERMAN; ENGLISH summary
(FB-42) Avail: NTIS HC A03/MF A01; Forschungsinst. fuer Anthropotech., Meckenheim, West Germany. DM 10

Experiments in pursuit tracking with a first order system were conducted. Tracking performance, depending on the forcing function bandwidth, the system parameters control gain and control spring resistance as well as their interactive influence, was investigated. These experiments, giving six subjects the possibility of self adjusting the system parameters according to the task, resulted in parameter settings which required an intraindividually constant average control force for the accomplishment of the task. It is noted that the average control deflection varied considerably. Results are interpreted according to the importance of proprioceptive force-feedback in continuous control.

EDC - A regenerable CO2 removal subsystem for an enhanced capability orbiter [ASME PAPER 79-ENAS-34] A80-15258

CARBON DIOXIDE TENSION
Difference between end-tidal and arterial P/CO2/ in exercise A80-13505

CARBONACEOUS CHONDRITES
Amino acids in the Yamato carbonaceous chrondrite from Antarctica A80-13548
Quantification of monocarboxylic acids in the Murchison carbonaceous meteorite A80-13549

CARBONACEOUS METEORITES
Uracil in carbonaceous meteorites A80-16068

CARBOXYLIC ACIDS
Quantification of monocarboxylic acids in the Murchison carbonaceous meteorite A80-13549

CARDIAC VENTRICLES
Echocardiographic recognition of atrioventricular valve stenosis associated with endocardial cushion defect - Pathologic and surgical correlates A80-15998

CARDIOGRAMS
Parameter estimation of radiocardiogram using a minicomputer A80-14798
Simultaneous muscle force and displacement transducer [NASA-CASE-NPO-14212-1] N80-12730

CARDIOTACHOMETERS
Design of a microprocessor based cardiotachometer [AD-A073105] N80-12731

CARDIOVASCULAR SYSTEM
Plasma catecholamines and cardiovascular responses to cold and mental activity A80-16455

CAROTID SINUS BODY
Active responses of the internal carotid artery to stretching
A80-17285

CATALYTIC ACTIVITY
Development of an improved Sabatier reactor --- catalytic oxygen recovery from carbon dioxide
[ASME PAPER 79-ENAS-36] A80-15260

CATECHOLAMINE
Catecholamines and chemical thermoregulation during cold acclimation
A80-14260
Plasma catecholamines and cardiovascular responses to cold and mental activity
A80-16455

CELLS (BIOLOGY)
Problems and potentialities of cultured plant cells in retrospect and prospect
A80-15225

CENTRAL NERVOUS SYSTEM
Memory and adaptation --- Russian Book
A80-14098

CENTRIFUGING STRESS
Relationship between recovery and hypothermia induced by centrifugation in rats
A80-13372
Effects of long-term repetitive exposure to centrifugation of 2G on developing rat
A80-13373

CHEMICAL COMPOSITION
Effects and post-effects of two-hour exhausting exercise on composition and gas transport functions of blood
A80-13273

CHEMICAL REACTIONS
Catecholamines and chemical thermoregulation during cold acclimation
A80-14260

CHEMOTHERAPY
Eye movements in paralyzed cats induced by drugs and sympathetic stimulation
A80-13591

CIRCADIAN RHYTHMS
Effects of cold exposure on circadian rhythm of body temperature in rats and rabbits
A80-13374

CIRCULAR CYLINDERS
Electromagnetic absorption in multilayered cylindrical models of man
A80-13216

CLINICAL MEDICINE
Medical applications of aerospace technology
A80-14793
Echocardiographic recognition of atrioventricular valve stenosis associated with endocardial cushion defect - Pathologic and surgical correlates
A80-15998
The effects of context on the structure of pain
N80-13761

CLOSED ECOLOGICAL SYSTEMS
Closed-ecology life support systems /CELSS/ for long-duration, manned missions
[ASME PAPER 79-ENAS-27] A80-15251
Use of phytotrons in assessing environmental requirements for plants in space habitats
[ASME PAPER 79-ENAS-28] A80-15252
Recycling plant, human and animal wastes to plant nutrients in a closed ecological system
[ASME PAPER 79-ENAS-29] A80-15253
Controlled-environment agricultural systems as food sources for large space habitats
[ASME PAPER 79-ENAS-30] A80-15254
Environmental systems for aquatic animal studies in the Shuttle era
[ASME PAPER 79-ENAS-45] A80-15268
A closed system: Man-higher plants /four-month experiment/ --- Russian book
A80-16393
Evaluation and comparison of alternative designs for water/solid-waste processing systems for spacecraft
[NASA-CR-162492] N80-12739
A preliminary research plan for development of a photosynthetic link in a closed ecological life support system
[NASA-CR-160399] N80-13758

COLD ACCLIMATIZATION
Effects of cold exposure on circadian rhythm of body temperature in rats and rabbits
A80-13374
Catecholamines and chemical thermoregulation during cold acclimation
A80-14260

COLD TOLERANCE
Investigation of thermoregulatory mechanisms
A80-13476
Thermogenic control during exercise in a cold environment
A80-13507
Plasma catecholamines and cardiovascular responses to cold and mental activity
A80-16455

COMPRESSED AIR
Effect of human exposure to a nitrogen-oxygen environment at 5-12 kgf/sq cm on certain indices of the higher nervous activity
A80-14258

COMPUTER PROGRAMS
Some aspects of processing physiological data
A80-16480

COMPUTERIZED SIMULATION
Integrated walking robot simulation and modelling
A80-14801
Processing of direction and magnitude by the saccadic eye-movement system
A80-17060

CONFERENCES
Guiding the development of a controlled ecological life support system
[NASA-CR-162452] N80-12735

CONSUMABLES (SPACECREW SUPPLIES)
Food technology in space habitats
[ASME PAPER 79-ENAS-31] A80-15255

CONTROL BOARDS
Rational ways to increase pictographic symbol discriminability
N80-12734

CONTROL SIMULATION
On the problem of spring loaded resistance to simple and complex positioning of a control stick --- in manual control experiments
[FB-40] N80-13778

CONTROL STABILITY
Ergonomical studies about the superposition of control activity and mechanical vibration
A80-13272

CONTROL STICKS
On the optimization of spring elasticity, damping, and inertia effects on the spring loading of a control stick
[FB-37] N80-13776
On the problem of spring loaded resistance to simple and complex positioning of a control stick --- in manual control experiments
[FB-40] N80-13778

CONTROL THEORY
Separation of motions in the problem of stabilizing biped walking
A80-14382

CONVECTIVE HEAT TRANSFER
Evaluation of heat convection and flow front influence on electrophoresis of biological substances in space flight conditions
[IAF PAPER 79-ST-17] A80-17067

CORONARY ARTERY DISEASE
Unreliability of exercise-induced R wave changes as indexes of coronary artery disease
A80-15996
Analysis of exercise-induced R wave amplitude changes in detection of coronary artery disease in asymptomatic men with left bundle branch block
A80-15997

CORTICOSTEROIDS
Effects of hypophysectomy and dexamethasone on rat adrenal response to microwaves
A80-16457

COSMIC RAYS
Biological investigations carried out in balloons
A80-13451
Radiation dose rate of a biological object from cosmic rays in the stratosphere and at the height of artificial earth satellites
A80-17100

CROP GROWTH
Use of phytotrons in assessing environmental requirements for plants in space habitats
[ASME PAPER 79-ENAS-26] A80-15252
CULTURE TECHNIQUES
Problems and potentialities of cultured plant cells in retrospect and prospect
A80-15225
CYTOLOGY
Human muscle fiber types in power lifters, distance runners and untrained subjects: A histochemical and ultrastructural study
N80-12727

D

DATA PROCESSING
Some aspects of processing physiological data
A80-16480
DENSITOMETERS
The place of computerized axial tomography /CAT/ in the examination of flight crews
A80-15629
DEOXYRIBONUCLEIC ACID
Radiation and DNA --- Russian book
A80-14097
DIAGNOSIS
Reliability, validity and application of an improved scale for assessment of motion sickness severity
[AD-A069130] N80-13766
DILUTION
The application of indirect oxymetry in the criticism of the dilution standards of oxygen regulators
A80-15636
DISCRIMINATORS
Amplitude-phase discriminator with two-CRT oscillograph display
A80-16471
DISPLACEMENT MEASUREMENT
Simultaneous muscle force and displacement transducer
[NASA-CASE-NPO-14212-1] N80-12730
DYNAMIC MODELS
Integrated walking robot simulation and modelling
A80-14801

E

ECHOCARDIOGRAPHY
Echocardiographic recognition of atrioventricular valve stenosis associated with endocardial cushion defect - Pathologic and surgical correlates
A80-15998
ECOLOGY
Guiding the development of a controlled ecological life support system
[NASA-CR-162452] N80-12735
Evaluation of a ground based manned demonstration as a milestone in CELSS development
N80-12736
Development requirements for a successful ground based CELSS demonstration
N80-12737
EDEMA
Resuscitation from hypothermia: A literature review
[AD-A069093] N80-13764
EFFERENT NERVOUS SYSTEMS
Interhemispheric relationships of monoamine oxidase activity and norepinephrine content in the cortical centers of the skin and motor analyzers in the human brain
A80-14257
ELASTIC DAMPING
On the problem of spring loaded resistance to simple and complex positioning of a control stick --- in manual control experiments
[PB-40] N80-13778
ELASTIC PROPERTIES
In vivo investigation of the elastohysteresis properties of the aorta and its branches
A80-17288
ELECTRIC DISCHARGES
A study of the reduction of carbon dioxide in a silent electric discharge
[ASME PAPER 79-ENAS-13] A80-15238
ELECTROCARDIOGRAPHY
The importance of continuous electrocardiogram recording in conduction disorders in flight crews
A80-15635
Analysis of exercise-induced R wave amplitude changes in detection of coronary artery disease in asymptomatic men with left bundle branch block
A80-15997
Analysis of the mean number of intersections of the zero level by physiological processes
A80-16469
Statistical representation of electrocardiographic body surface maps for feature identification data compression and classification
N80-12728
ELECTROCHEMICAL CELLS
EDC - A regenerable CO2 removal subsystem for an enhanced capability orbiter
[ASME PAPER 79-ENAS-34] A80-15258
ELECTROCHEMISTRY
Development of the electrochemically regenerable carbon dioxide absorber for portable life support system application
[ASME PAPER 79-ENAS-33] A80-15257
ELECTROCONDUCTIVITY
The importance of continuous electrocardiogram recording in conduction disorders in flight crews
A80-15635
ELECTROENCEPHALOGRAPHY
T-waves in the exercise ECG - Their location and occurrence
A80-13263
Analysis of the mean number of intersections of the zero level by physiological processes
A80-16469
ELECTROLYTE METABOLISM
Water-electrolyte metabolism and the function of human kidneys at mountain altitudes
A80-13477
ELECTROMAGNETIC ABSORPTION
Electromagnetic absorption in multilayered cylindrical models of man
A80-13216
ELECTROMAGNETIC RADIATION
A possible mechanism for the influence of electromagnetic radiation on neuroelectric potentials
A80-16575
ELECTROPHORESIS
Evaluation of heat convection and flow front influence on electrophoresis of biological substances in space flight conditions
[IAF PAPER 79-ST-17] A80-17067
ELECTROPHYSIOLOGY
Investigation of certain electrophysiological and biochemical parameters in hypoxia testing at a simulated altitude of 5500 m
A80-15634
Analysis of the mean number of intersections of the zero level by physiological processes
A80-16469
ENERGY CONVERSION EFFICIENCY
A study of the reduction of carbon dioxide in a silent electric discharge
[ASME PAPER 79-ENAS-13] A80-15238
ENERGY REQUIREMENTS
Analysis of metabolic energy utilization in the Skylab astronauts
[NASA-CR-160402] N80-13770
ENVIRONMENT SIMULATORS
A field of view simulator equipped for perspective transformation on a television raster
[PB-34] N80-13775
ENVIRONMENTAL CONTROL
The use of a positive displacement air cycle machine in a closed-loop environmental control system
[ASME PAPER 79-ENAS-6] A80-15231
ERROR ANALYSIS
Error dynamics of operator recognition of visual images
A80-16464
Skylab water balance error analysis
[NASA-CR-160403] N80-13771
ERRORS
Some models of human error for man-machine system evaluation
[AD-A072838] N80-12740

ERYTHROCYTES
Plasma volume during stress in man - Osmolality and red cell volume A80-13506
System parameters for erythropoiesis control model: Comparison of normal values in human and mouse model [NASA-CR-160401] N80-13759
ESTIMATING
Parameter estimation of radiocardiogram using a minicomputer A80-14798
EVAPORATORS
Applications of the thermoelectrically integrated membrane evaporator subsystem [ASME PAPER 79-ENAS-48] A80-15271
EXOBIOLOGY
Search for microorganisms in space --- Russian book A80-16459
EXTRAVEHICULAR ACTIVITY
High-pressure protective systems technology [ASME PAPER 79-ENAS-15] A80-15240
Development of the electrochemically regenerable carbon dioxide absorber for portable life support system application [ASME PAPER 79-ENAS-33] A80-15257
/Hard Hat/ EVA, personal equipment to support large scale construction in space [ASME PAPER 79-ENAS-43] A80-15266
EYE MOVEMENTS
Eye movements in paralyzed cats induced by drugs and sympathetic stimulation A80-13591
Calculation of the surface on which the corneal flash is located with application to the development of a system for recording eye movement A80-13859
Characteristics of oculomotor responses and their sensory components during simulation of low-altitude flights A80-14166
Interdependence between the saccadic and the continuous eye movement control systems A80-14797
Human operator eye-lid movement reaction during intense visual tasks involving the detection and tracking of visual signals A80-16470
Operator eye-movement reaction during tracking of discrete stimuli with random time and space distribution A80-16474

F

FEEDBACK CONTROL
The use of a positive displacement air cycle machine in a closed-loop environmental control system [ASME PAPER 79-ENAS-6] A80-15231
On the interaction between system and task parameters through continuous manual control [PB-42] N80-13780
FEMALES
Maximal work capacity of women during acute hypoxia A80-16456
FIBERS
Human muscle fiber types in power lifters, distance runners and untrained subjects: A histochemical and ultrastructural study N80-12727
FINE STRUCTURE
Determining biological fine structure by differential absorption of soft X-ray [BNL-26282] N80-13760
FIREFLIES
Time-resolved spectrometry of in vivo firefly bioluminescence emissions A80-16793
FIRES
A procedure for electronically monitoring animal response parameters using the rotating wheel --- aircraft fire hazard application A80-13322
FISHES
Environmental systems for aquatic animal studies in the Shuttle era [ASME PAPER 79-ENAS-45] A80-15268
FLIGHT CREWS
Detection of different target types in realistic terrain --- visual air to ground recognition [AD-A072973] N80-12733
Aviation night vision goggle [AD-A073296] N80-13773
FLIGHT SIMULATION
Characteristics of oculomotor responses and their sensory components during simulation of low-altitude flights A80-14166
FLIGHT TESTS
Environmental systems for aquatic animal studies in the Shuttle era [ASME PAPER 79-ENAS-45] A80-15268
The Life Sciences Flight Experiments Program - An update [AAS PAPER 79-250] A80-16430
FOOD INTAKE
Effects of long-term repetitive exposure to centrifugation of 2G on developing rat A80-13373
FREE FALL
Motion sickness susceptibility during rotation at 30 rpm in free-fall parabolic flight A80-17054

G

GAS COMPOSITION
The application of indirect oxymetry in the criticism of the dilution standards of oxygen regulators A80-15636
GAS EXCHANGE
Difference between end-tidal and arterial P/CO2/ in exercise A80-13505
GAS REACTORS
A study of the reduction of carbon dioxide in a silent electric discharge [ASME PAPER 79-ENAS-13] A80-15238
Development of an improved Sabatier reactor --- catalytic oxygen recovery from carbon dioxide [ASME PAPER 79-ENAS-36] A80-15260
GAS TRANSPORT
Effects and post-effects of two-hour exhausting exercise on composition and gas transport functions of blood A80-13273
GENETICS
Problems and potentialities of cultured plant cells in retrospect and prospect A80-15225
GOGGLES
Aviation night vision goggle [AD-A073296] N80-13773
GRAVITATIONAL EFFECTS
Use of microspheres in measurement of regional blood flows during +Gz stress A80-16452

H

HEAD (ANATOMY)
The place of computerized axial tomography /CAT/ in the examination of flight crews A80-15629
HEART DISEASES
Echocardiographic recognition of atrioventricular valve stenosis associated with endocardial cushion defect - Pathologic and surgical correlates A80-15998
HEART RATE
T-waves in the exercise ECG - Their location and occurrence A80-13263
Seasonal variation in work performance and heart rate response to exercise - A study of 1,835 middle-aged men A80-13274
HEAT ACCLIMATIZATION
Influence of air velocity and heat acclimation on human skin wettedness and sweating efficiency A80-16454

HELICOPTERS
The physiopathology of vertebral pain in helicopter pilots A80-15633
Effect of noise spectra and a listening task upon passenger annoyance in a helicopter interior noise environment [NASA-TP-1590] N80-13769

HEMATOPOIESIS
System parameters for erythropoiesis control model: Comparison of normal values in human and mouse model [NASA-CR-160401] N80-13759

HEMOGLOBIN
Plasma volume during stress in man - Osmolality and red cell volume A80-13506

HIBERNATION
Current problems of hypothermy A80-14259

HIGH ALTITUDE
Adrenocortical function in rats chronically exposed to high altitude A80-16453

HIGH ALTITUDE PRESSURE
Investigation of certain electrophysiological and biochemical parameters in hypoxia testing at a simulated altitude of 5500 m A80-15638

HIGH PRESSURE
Foundation of hyperbaric physiology --- Russian book A80-13526
High-pressure protective systems technology [ASME PAPER 79-ENAS-15] A80-15240

HIS BUNDLE
The importance of continuous electrocardiogram recording in conduction disorders in flight crews A80-15635
Analysis of exercise-induced R wave amplitude changes in detection of coronary artery disease in asymptomatic men with left bundle branch block A80-15997

HISTOLOGY
Determining biological fine structure by differential absorption of soft X-ray [BNL-26282] N80-13760

HUMAN BEHAVIOR
Investigation of the psychophysiological characteristics of man under extreme conditions A80-16468

HUMAN BODY
Electromagnetic absorption in multilayered cylindrical models of man A80-13216
General characteristics of the rheological properties of the soft tissues of the human body using local cycling loading measurements and a simple phenomenological model of these properties A80-13243

HUMAN FACTORS ENGINEERING
Innovations in transportation engineering and human factors A80-13186
Ergonomical studies about the superposition of control activity and mechanical vibration A80-13272
/Hard Hat/ EVA, personal equipment to support large scale construction in space [ASME PAPER 79-ENAS-43] A80-15266
Investigation of the psychophysiological characteristics of man under extreme conditions A80-16468
Method for generalizing operator performance factor evaluation in multidimensional tracking problems A80-16473
A postural measurement system for induced body sway assessment N80-12729
Single pilot scanning behavior in simulated instrument flight [NASA-TM-80178] N80-12732
Some models of human error for man-machine system evaluation [AD-A072838] N80-12740
Anti-suffocation valve Bendix type no. 3267010-0101 [AD-A068927] N80-13772
Aviation night vision goggle [AD-A073296] N80-13773

HUMAN PATHOLOGY
The place of computerized axial tomography /CAT/ in the examination of flight crews A80-15629
The physiopathology of vertebral pain in helicopter pilots A80-15633

HUMAN PERFORMANCE
Seasonal variation in work performance and heart rate response to exercise - A study of 1,835 middle-aged men A80-13274
Difference between end-tidal and arterial P/CO2/ in exercise A80-13505
Plasma volume during stress in man - Osmolality and red cell volume A80-13506
Thermogenic control during exercise in a cold environment A80-13507
The importance of pattern information for the resolution of depth-ambiguous apparent motion A80-13999
Memory and adaptation --- Russian Book A80-14098
Artificial sensory organs: Problems of modeling sensory systems --- Russian book A80-16461
Some aspects of processing physiological data A80-16480
Detection of different target types in realistic terrain --- visual air to ground recognition [AD-A072973] N80-12733
Some models of human error for man-machine system evaluation [AD-A072838] N80-12740
Reliability, validity and application of an improved scale for assessment of motion sickness severity [AD-A069130] N80-13766

HUMAN REACTIONS
Choice reaction time to movement of eccentric visual targets during concurrent rotary acceleration A80-14000
Influence of air velocity and heat acclimation on human skin wettedness and sweating efficiency A80-16454
Effect of noise spectra and a listening task upon passenger annoyance in a helicopter interior noise environment [NASA-TP-1590] N80-13769

HUMAN TOLERANCES
Investigation of thermoregulatory mechanisms A80-13476
Water-electrolyte metabolism and the function of human kidneys at mountain altitudes A80-13477
Foundation of hyperbaric physiology --- Russian book A80-13526
Prediction of the physical work capacity of persons at mountain altitudes A80-14165

HYDROGEN
Development of an improved Sabatier reactor --- catalytic oxygen recovery from carbon dioxide [ASME PAPER 79-ENAS-36] A80-15260

HYDROPONICS
Recycling plant, human and animal wastes to plant nutrients in a closed ecological system [ASME PAPER 79-ENAS-29] A80-15253

HYPERBARIC CHAMBERS
Foundation of hyperbaric physiology --- Russian book A80-13526

HYPOTHERMIA
Relationship between recovery and hypothermia induced by centrifugation in rats A80-13372
Current problems of hypothermy A80-14259
Resuscitation from hypothermia: A literature review [AD-A069093] N80-13764

HYPOXIA
Eye movements in paralyzed cats induced by drugs and sympathetic stimulation A80-13591

Investigation of certain electrophysiological and biochemical parameters in hypoxia testing at a simulated altitude of 5500 m A80-15634
Maximal work capacity of women during acute hypoxia A80-16456

HYSTERESIS
In vivo investigation of the elastohysteresis properties of the aorta and its branches A80-17288

I

IMAGE INTENSIFIERS
Aviation night vision goggle [AD-A073296] N80-13773

IMAGE PROCESSING
Visual information and vision of robots --- Russian book A80-14099

INFORMATION SYSTEMS
Visual information and vision of robots --- Russian book A80-14099

INSTRUMENT ERRORS
T-waves in the exercise ECG - Their location and occurrence A80-13263

INSTRUMENT FLIGHT RULES
Single pilot scanning behavior in simulated instrument flight [NASA-TM-80178] N80-12732

IONIZING RADIATION
Radiation and DNA --- Russian book A80-14097
Effects of ionizing radiation on the light sensing elements of the retina [LBL-5683] N80-13767

ISOTOPIC LABELING
Parameter estimation of radiocardiogram using a minicomputer A80-14798
Use of microspheres in measurement of regional blood flows during +Gz stress A80-16452

K

KIDNEYS
Water-electrolyte metabolism and the function of human kidneys at mountain altitudes A80-13477

L

LEG (ANATOMY)
Integrated walking robot simulation and modelling A80-14801

LIFE CYCLE COSTS
The use of a positive displacement air cycle machine in a closed-loop environmental control system [ASME PAPER 79-ENAS-6] A80-15231

LIFE SCIENCES
Experiments for dedicated life science missions [AAS PAPER 79-251] A80-16431

LIFE SUPPORT SYSTEMS
Development of a Space Shuttle plant growth unit [ASME PAPER 79-ENAS-19] A80-15243
Bosch - An alternate CO2 reduction technology [ASME PAPER 79-ENAS-32] A80-15256
EDC - A regenerable CO2 removal subsystem for an enhanced capability orbiter [ASME PAPER 79-ENAS-34] A80-15258
/Hard Hat/ EVA, personal equipment to support large scale construction in space [ASME PAPER 79-ENAS-43] A80-15266
Environmental systems for aquatic animal studies in the Shuttle era [ASME PAPER 79-ENAS-45] A80-15268
Applications of the thermoelectrically integrated membrane evaporator subsystem [ASME PAPER 79-ENAS-48] A80-15271
Guiding the development of a controlled ecological life support system [NASA-CR-162452] N80-12735
Evaluation of a ground based manned demonstration as a milestone in CELSS development N80-12736
Development requirements for a successful ground based CELSS demonstration N80-12737
Research recommendations N80-12738

LONG TERM EFFECTS
Effects of long-term repetitive exposure to centrifugation of 2G on developing rat A80-13373

LOW ALTITUDE
Characteristics of oculomotor responses and their sensory components during simulation of low-altitude flights A80-14166

LUNGS
Modeling studies of the pressure-flow relationship of the central airways N80-13763

M

MAN ENVIRONMENT INTERACTIONS
A closed system: Man-higher plants /four-month experiment/ --- Russian book A80-16393

MAN MACHINE SYSTEMS
Innovations in transportation engineering and human factors A80-13186
Psychophysical studies of human-operator activity and instrumentation for these studies --- Russian book A80-16463
Error dynamics of operator recognition of visual images A80-16464
Autogenic training as a method of stimulating operator work capacity A80-16465
Pursuit-tracking simulator with adaptive pseudorandom program of marker trajectory A80-16466
Determination of psychophysiological reaction norms of a pilot during work A80-16472
Some models of human error for man-machine system evaluation [AD-A072838] N80-12740
On the interaction between system and task parameters through continuous manual control [PB-42] N80-13780

MANNED SPACE FLIGHT
Closed-ecology life support systems /CELSS/ for long-duration, manned missions [ASME PAPER 79-ENAS-27] A80-15251
Evaluation of a ground based manned demonstration as a milestone in CELSS development N80-12736
Development requirements for a successful ground based CELSS demonstration N80-12737
Research recommendations N80-12738

MANUAL CONTROL
A comparison of control simulators having force inputs and displacement feedback. Applications to the manual control of underwater vehicles [PB-38] N80-13777
On the interaction between system and task parameters through continuous manual control [PB-42] N80-13780

MAPPING
Statistical representation of electrocardiographic body surface maps for feature identification data compression and classification N80-12728

MASS SPECTROMETERS
Spacelab environment investigation by mass spectrometer [BMFT-FB-W-78-02] N80-13774

MATERIALS RECOVERY
Recycling plant, human and animal wastes to plant nutrients in a closed ecological system [ASME PAPER 79-ENAS-29] A80-15253

MATHEMATICAL MODELS
Electromagnetic absorption in multilayered cylindrical models of man A80-13216

Mathematical model of respiratory rhythm generation A80-16602
Numerical solution of a hyperbolic system of conservation laws for blood flow in the arterial tree N80-12726
System parameters for erythropoiesis control model: Comparison of normal values in human and mouse model [NASA-CR-160401] N80-13759

MEDICAL ELECTRONICS
Simultaneous muscle force and displacement transducer [NASA-CASE-NPO-14212-1] N80-12730

MEDICAL SERVICES
Medical applications of aerospace technology A80-14793

MEMBRANES
Applications of the thermoelectrically integrated membrane evaporator subsystem [ASME PAPER 79-ENAS-48] A80-15271

MEMORY
Memory and adaptation --- Russian Book A80-14098

MENTAL PERFORMANCE
Choice reaction time to movement of eccentric visual targets during concurrent rotary acceleration A80-14000
Effect of human exposure to a nitrogen-oxygen environment at 5-12 kgf/sq cm on certain indices of the higher nervous activity A80-14258
Plasma catecholamines and cardiovascular responses to cold and mental activity A80-16455

METABOLISM
Analysis of metabolic energy utilization in the Skylab astronauts [NASA-CR-160402] N80-13770

METEORITIC COMPOSITION
Amino acids in the Yamato carbonaceous chrondrite from Antarctica A80-13548
Quantification of monocarboxylic acids in the Murchison carbonaceous meteorite A80-13549
Uracil in carbonaceous meteorites A80-16068

MICROORGANISMS
Search for microorganisms in space --- Russian book A80-16459

MICROPROCESSORS
Design of a microprocessor based cardiotachometer [AD-A073105] N80-12731

MICROWAVES
Microwaves - Effect on thermoregulatory behavior in rats A80-13590
Effects of hypophysectomy and dexamethasone on rat adrenal response to microwaves A80-16457

MILITARY AIRCRAFT
The use of a positive displacement air cycle machine in a closed-loop environmental control system [ASME PAPER 79-ENAS-6] A80-15231

MINICOMPUTERS
Parameter estimation of radiocardiogram using a minicomputer A80-14798

MISSION PLANNING
Experiments for dedicated life science missions [AAS PAPER 79-251] A80-16431

MOMENTS OF INERTIA
On the optimization of spring elasticity, damping, and inertia effects on the spring loading of a control stick [PB-37] N80-13776

MONOCULAR VISION
Binocular and monocular stimuli for motion in depth - Changing-disparity and changing-size feed the same motion-in-depth stage A80-17059

MOTION PERCEPTION
The importance of pattern information for the resolution of depth-ambiguous apparent motion A80-13999
Binocular and monocular stimuli for motion in depth - Changing-disparity and changing-size feed the same motion-in-depth stage A80-17059

MOTION SICKNESS
Motion sickness susceptibility during rotation at 30 rpm in free-fall parabolic flight A80-17054
Reliability, validity and application of an improved scale for assessment of motion sickness severity [AD-A069130] N80-13766

MOTION SIMULATORS
Pursuit-tracking simulator with adaptive pseudorandom program of marker trajectory A80-16466
A comparison of control simulators having force inputs and displacement feedback. Applications to the manual control of underwater vehicles [PB-38] N80-13777
The automobile driving simulator for anthropogenic research [PB-41] N80-13779

MOTION STABILITY
Separation of motions in the problem of stabilizing biped walking A80-14382
Vertical stabilization of a quadriped walking machine A80-17262

MOUNTAIN INHABITANTS
Water-electrolyte metabolism and the function of human kidneys at mountain altitudes A80-13477
Prediction of the physical work capacity of persons at mountain altitudes A80-14165

MUSCLES
Human muscle fiber types in power lifters, distance runners and untrained subjects: A histochemical and ultrastructural study N80-12727

MUSCULAR STRENGTH
Development and description of a device for static strength measurement in the armed forces examination and entrance station [AD-A068684] N80-13765

MYOCARDIUM
Simultaneous muscle force and displacement transducer [NASA-CASE-NPO-14212-1] N80-12730

N

NASA PROGRAMS
Medical applications of aerospace technology A80-14793
The Life Sciences Flight Experiments Program - An update [AAS PAPER 79-250] A80-16430

NERVOUS SYSTEM
Effect of human exposure to a nitrogen-oxygen environment at 5-12 kgf/sq cm on certain indices of the higher nervous activity A80-14258

NEUROMUSCULAR TRANSMISSION
The importance of continuous electrocardiogram recording in conduction disorders in flight crews A80-15635

NEURONS
Amplitude-phase discriminator with two-CRT oscillograph display A80-16471
Mathematical model of respiratory rhythm generation A80-16602

NEUROPHYSIOLOGY
Memory and adaptation --- Russian Book A80-14098
Artificial sensory organs: Problems of modeling sensory systems --- Russian book A80-16461
A possible mechanism for the influence of electromagnetic radiation on neuroelectric potentials A80-16575

NIGHT VISION
Aviation night vision goggle [AD-A073296] N80-13773

NITROGEN
Effect of human exposure to a nitrogen-oxygen environment at 5-12 kgf/sq cm on certain indices of the higher nervous activity
A80-14258

NOISE TOLERANCE
Effect of noise spectra and a listening task upon passenger annoyance in a helicopter interior noise environment
[NASA-TP-1590] N80-13769

NONDESTRUCTIVE TESTS
Determining biological fine structure by differential absorption of soft X-ray
[BNL-26282] N80-13760

NONLINEAR FEEDBACK
On the problem of spring loaded resistance to simple and complex positioning of a control stick --- in manual control experiments
[PB-40] N80-13778

NOREPINEPHRINE
Interhemispheric relationships of monoamine oxidase activity and norepinephrine content in the cortical centers of the skin and motor analyzers in the human brain
A80-14257

NUTRITIONAL REQUIREMENTS
Food technology in space habitats
[ASME PAPER 79-ENAS-31] A80-15255

O

OCULOMOTOR NERVES
Characteristics of oculomotor responses and their sensory components during simulation of low-altitude flights
A80-14166

OPERATOR PERFORMANCE
Ergonomical studies about the superposition of control activity and mechanical vibration
A80-13272

Psychophysical studies of human-operator activity and instrumentation for these studies --- Russian book
A80-16463

Error dynamics of operator recognition of visual images
A80-16464

Autogenic training as a method of stimulating operator work capacity
A80-16465

Pursuit-tracking simulator with adaptive pseudorandom program of marker trajectory
A80-16466

Human operator eye-lid movement reaction during intense visual tasks involving the detection and tracking of visual signals
A80-16470

Operator eye-movement reaction during tracking of discrete stimuli with random time and space distribution
A80-16474

The automobile driving simulator for anthropogenic research
[PB-41] N80-13779

OPTICAL EMISSION SPECTROSCOPY
Time-resolved spectrometry of in vivo firefly bioluminescence emissions
A80-16793

OPTICAL ILLUSION
The importance of pattern information for the resolution of depth-ambiguous apparent motion
A80-13999

OPTICAL MEASURING INSTRUMENTS
Calculation of the surface on which the corneal flash is located with application to the development of a system for recording eye movement
A80-13859

OPTICAL TRACKING
Human operator eye-lid movement reaction during intense visual tasks involving the detection and tracking of visual signals
A80-16470

Operator eye-movement reaction during tracking of discrete stimuli with random time and space distribution
A80-16474

Single pilot scanning behavior in simulated instrument flight
[NASA-TM-80178] N80-12732

OPTIMAL CONTROL
Interdependence between the saccadic and the continuous eye movement control systems
A80-14797

On the optimization of spring elasticity, damping, and inertia effects on the spring loading of a control stick
[PB-37] N80-13776

OSCILLOGRAPHS
Amplitude-phase discriminator with two-CRT oscillograph display
A80-16471

OXIDASE
Interhemispheric relationships of monoamine oxidase activity and norepinephrine content in the cortical centers of the skin and motor analyzers in the human brain
A80-14257

OXYGEN MASKS
The application of indirect oxymetry in the criticism of the dilution standards of oxygen regulators
A80-15636

Anti-suffocation valve Bendix type no. 3267010-0101
[AD-A068927] N80-13772

OXYGEN METABOLISM
Current problems of hypothermy
A80-14259

OXYGEN SUPPLY EQUIPMENT
Anti-suffocation valve Bendix type no. 3267010-0101
[AD-A068927] N80-13772

OXYGEN TENSION
Effect of human exposure to a nitrogen-oxygen environment at 5-12 kgf/sq cm on certain indices of the higher nervous activity
A80-14258

The application of indirect oxymetry in the criticism of the dilution standards of oxygen regulators
A80-15636

P

PAIN
The effects of context on the structure of pain
N80-13761

PAIN SENSITIVITY
The effects of context on the structure of pain
N80-13761

PARABOLIC FLIGHT
Motion sickness susceptibility during rotation at 30 rpm in free-fall parabolic flight
A80-17054

PARALYSIS
Eye movements in paralyzed cats induced by drugs and sympathetic stimulation
A80-13591

PASSENGERS
Innovations in transportation engineering and human factors
A80-13186

PERCEPTION
The effects of context on the structure of pain
N80-13761

PERFORMANCE PREDICTION
Prediction of the physical work capacity of persons at mountain altitudes
A80-14165

PERFORMANCE TESTS
A comparison of control simulators having force inputs and displacement feedback. Applications to the manual control of underwater vehicles
[PB-38] N80-13777

PERSPIRATION
Influence of air velocity and heat acclimation on human skin wettedness and sweating efficiency
A80-16454

PHOTORECEPTORS
Effects of ionizing radiation on the light sensing elements of the retina
[LBL-5683] N80-13767

PHOTOSYNTHESIS
Photosynthetic carbon reduction by seagrasses exposed to ultraviolet A radiation
[NASA-CR-160397] N80-13757

A preliminary research plan for development of a photosynthetic link in a closed ecological life support system
[NASA-CR-160399] N80-13758

PHYSICAL EXERCISE
T-waves in the exercise ECG - Their location and occurrence A80-13263
Effects and post-effects of two-hour exhausting exercise on composition and gas transport functions of blood A80-13273
Seasonal variation in work performance and heart rate response to exercise - A study of 1,835 middle-aged men A80-13274
Difference between end-tidal and arterial P/CO2/ in exercise A80-13505
Thermogenic control during exercise in a cold environment A80-13507
Unreliability of exercise-induced R wave changes as indexes of coronary artery disease A80-15996
Analysis of exercise-induced R wave amplitude changes in detection of coronary artery disease in asymptomatic men with left bundle branch block A80-15997

PHYSICAL FITNESS
Seasonal variation in work performance and heart rate response to exercise - A study of 1,835 middle-aged men A80-13274
Development and description of a device for static strength measurement in the armed forces examination and entrance station [AD-A068684] N80-13765

PHYSIOLOGICAL EFFECTS
Microwaves - Effect on thermoregulatory behavior in rats A80-13590
Memory and adaptation --- Russian Book A80-14098
Effects of hypophysectomy and dexamethasone on rat adrenal response to microwaves A80-16457
Physiological characteristics of psychic models of hypo- and hyper-gravity A80-16467

PHYSIOLOGICAL FACTORS
Some aspects of processing physiological data A80-16480

PHYSIOLOGICAL RESPONSES
Relationship between recovery and hypothermia induced by centrifugation in rats A80-13372
Foundation of hyperbaric physiology --- Russian book A80-13526
The physiopathology of vertebral pain in helicopter pilots A80-15633
Maximal work capacity of women during acute hypoxia A80-16456
A possible mechanism for the influence of electromagnetic radiation on neuroelectric potentials A80-16575

PHYSIOLOGICAL TESTS
Investigation of certain electrophysiolcgical and biochemical parameters in hypoxia testing at a simulated altitude of 5500 m A80-15634
Unreliability of exercise-induced R wave changes as indexes of coronary artery disease A80-15996
Analysis of the mean number of intersections of the zero level by physiological processes A80-16469
Statistical representation of electrocardiographic body surface maps for feature identification data compression and classification N80-12728

PHYTOTRONS
Use of phytotrons in assessing environmental requirements for plants in space habitats [ASME PAPER 79-ENAS-28] A80-15252

PIEZOELECTRIC TRANSDUCERS
Simultaneous muscle force and displacement transducer [NASA-CASE-NPO-14212-1] N80-12730

PILOT PERFORMANCE
Characteristics of oculomotor responses and their sensory components during simulation of low-altitude flights A80-14166
Determination of psychophysiological reaction norms of a pilot during work A80-16472
Method for generalizing operator performance factor evaluation in multidimensional tracking problems A80-16473
Single pilot scanning behavior in simulated instrument flight [NASA-TM-80178] N80-12732

PILOTS (PERSONNEL)
The importance of continuous electrocardiogram recording in conduction disorders in flight crews A80-15635

PITUITARY GLAND
Adrenocortical function in rats chronically exposed to high altitude A80-16453
Effects of hypophysectomy and dexamethasone on rat adrenal response to microwaves A80-16457

PLANTS (BOTANY)
Problems and potentialities of cultured plant cells in retrospect and prospect A80-15225
Development of a Space Shuttle plant growth unit [ASME PAPER 79-ENAS-19] A80-15243
A closed system: Man-higher plants /four-month experiment/ --- Russian book A80-16393

PORTABLE LIFE SUPPORT SYSTEMS
Development of the electrochemically regenerable carbon dioxide absorber for portable life support system application [ASME PAPER 79-ENAS-33] A80-15257

POSTURE
The physiopathology of vertebral pain in helicopter pilots A80-15633
A postural measurement system for induced body sway assessment N80-12729

PRESSURE BREATHING
Modeling studies of the pressure-flow relationship of the central airways N80-13763

PRESSURE CHAMBERS
Effect of human exposure to a nitrogen-oxygen environment at 5-12 kgf/sq cm on certain indices of the higher nervous activity A80-14258

PROPORTIONAL LIMIT
On the optimization of spring elasticity, damping, and inertia effects on the spring loading of a control stick [FB-37] N80-13776

PROSTHETIC DEVICES
Artificial sensory organs: Problems of modeling sensory systems --- Russian book A80-16461

PSYCHOLOGICAL TESTS
Investigation of the psychophysiological characteristics of man under extreme conditions A80-16468

PSYCHOMOTOR PERFORMANCE
A procedure for electronically monitoring animal response parameters using the rotating wheel --- aircraft fire hazard application A80-13322
Physiological characteristics of psychic models of hypo- and hyper-gravity A80-16467
Determination of psychophysiological reaction norms of a pilot during work A80-16472

PSYCHOPHYSICS
Psychophysical studies of human-operator activity and instrumentation for these studies --- Russian book A80-16463

PSYCHOPHYSIOLOGY
Psychophysical studies of human-operator activity and instrumentation for these studies --- Russian book
A80-16463
Determination of psychophysiological reaction norms of a pilot during work
A80-16472
Operator eye-movement reaction during tracking of discrete stimuli with random time and space distribution
A80-16474

PUBLIC HEALTH
Seasonal variation in work performance and heart rate response to exercise - A study of 1,835 middle-aged men
A80-13274

PULSED RADIATION
Time-resolved spectrometry of in vivo firefly bioluminescence emissions
A80-16793

PUPIL SIZE
Calculation of the surface on which the corneal flash is located with application to the development of a system for recording eye movement
A80-13859

PURSUIT TRACKING
Interdependence between the saccadic and the continuous eye movement control systems
A80-14797
Pursuit-tracking simulator with adaptive pseudorandom program of marker trajectory
A80-16466
Method for generalizing operator performance factor evaluation in multidimensional tracking problems
A80-16473
On the interaction between system and task parameters through continuous manual control
[PB-42] N80-13780

PYROLYTIC MATERIALS
A procedure for electronically monitoring animal response parameters using the rotating wheel --- aircraft fire hazard application
A80-13322

R

RADIATION DOSAGE
Radiation dose rate of a biological object from cosmic rays in the stratosphere and at the height of artificial earth satellites
A80-17100

RADIATION EFFECTS
Microwaves - Effect on thermoregulatory behavior in rats
A80-13590
Radiation and DNA --- Russian book
A80-14097
Effects of hypophysectomy and dexamethasone on rat adrenal response to microwaves
A80-16457
A possible mechanism for the influence of electromagnetic radiation on neuroelectric potentials
A80-16575
Effects of ionizing radiation on the light sensing elements of the retina
[LBL-5683] N80-13767

RADIOBIOLOGY
Radiation and DNA --- Russian book
A80-14097
Parameter estimation of radiocardiogram using a minicomputer
A80-14798

REACTION TIME
Choice reaction time to movement of eccentric visual targets during concurrent rotary acceleration
A80-14000

REACTOR DESIGN
Development of an improved Sabatier reactor --- catalytic oxygen recovery from carbon dioxide
[ASME PAPER 79-ENAS-36] A80-15260

REAL TIME OPERATION
The automobile driving simulator for anthropogenic research
[PB-41] N80-13779

RECORDING INSTRUMENTS
Calculation of the surface on which the corneal flash is located with application to the development of a system for recording eye movement
A80-13859

REDUCTION (CHEMISTRY)
A study of the reduction of carbon dioxide in a silent electric discharge
[ASME PAPER 79-ENAS-13] A80-15238

REGENERATORS
Development of the electrochemically regenerable carbon dioxide absorber for portable life support system application
[ASME PAPER 79-ENAS-33] A80-15257

RESEARCH AND DEVELOPMENT
Research recommendations
N80-12738

RESONANT FREQUENCIES
Electromagnetic absorption in multilayered cylindrical models of man
A80-13216

RESPIRATORY RATE
Mathematical model of respiratory rhythm generation
A80-16602

RESUSCITATION
Resuscitation from hypothermia: A literature review
[AD-A069093] N80-13764

RETINA
Effects of ionizing radiation on the light sensing elements of the retina
[LBL-5683] N80-13767

RHEOLOGY
General characteristics of the rheological properties of the soft tissues of the human body using local cycling loading measurements and a simple phenomenological model of these properties
A80-13243

ROBOTS
Visual information and vision of robots --- Russian book
A80-14099
Integrated walking robot simulation and modelling
A80-14801
Vertical stabilization of a quadriped walking machine
A80-17262

ROTATING BODIES
Choice reaction time to movement of eccentric visual targets during concurrent rotary acceleration
A80-14000

ROTATING ENVIRONMENTS
A procedure for electronically monitoring animal response parameters using the rotating wheel --- aircraft fire hazard application
A80-13322

S

SABATIER REACTION
Development of an improved Sabatier reactor --- catalytic oxygen recovery from carbon dioxide
[ASME PAPER 79-ENAS-36] A80-15260

SACCADIC EYE MOVEMENTS
Interdependence between the saccadic and the continuous eye movement control systems
A80-14797
Processing of direction and magnitude by the saccadic eye-movement system
A80-17060

SAFETY DEVICES
/Hard Hat/ EVA, personal equipment to support large scale construction in space
[ASME PAPER 79-ENAS-43] A80-15266

SATELLITE ORBITS
Radiation dose rate of a biological object from cosmic rays in the stratosphere and at the height of artificial earth satellites
A80-17100

SATELLITE ROTATION
Motion sickness susceptibility during rotation at 30 rpm in free-fall parabolic flight
A80-17054

SEA GRASSES
Photosynthetic carbon reduction by seagrasses exposed to ultraviolet A radiation
[NASA-CR-160397] N80-13757

SENSE ORGANS
Artificial sensory organs: Problems of modeling sensory systems --- Russian book
A80-16461

SENSORY FEEDBACK
A comparison of control simulators having force inputs and displacement feedback. Applications to the manual control of underwater vehicles
[PB-38] N80-13777

SENSORY PERCEPTION
Characteristics of oculomotor responses and their sensory components during simulation of low-altitude flights
A80-14166
Artificial sensory organs: Problems of modeling sensory systems --- Russian book
A80-16461

SERVOMECHANISMS
Integrated walking robot simulation and modelling
A80-14801

SIGNS AND SYMPTOMS
Unreliability of exercise-induced R wave changes as indexes of coronary artery disease
A80-15996
Analysis of exercise-induced R wave amplitude changes in detection of coronary artery disease in asymptomatic men with left bundle branch block
A80-15997

SKIN (ANATOMY)
Interhemispheric relationships of monoamine oxidase activity and norepinephrine content in the cortical centers of the skin and motor analyzers in the human brain
A80-14257

SKYLAB PROGRAM
Analysis of metabolic energy utilization in the Skylab astronauts
[NASA-CR-160402] N80-13770
Skylab water balance error analysis
[NASA-CR-160403] N80-13771

SOCIAL FACTORS
Innovations in transportation engineering and human factors
A80-13186

SPACE ERECTABLE STRUCTURES
/Hard Hat/ EVA, personal equipment to support large scale construction in space
[ASME PAPER 79-ENAS-43] A80-15266

SPACE FLIGHT
The Life Sciences Flight Experiments Program - An update
[AAS PAPER 79-250] A80-16430

SPACE FLIGHT FEEDING
Closed-ecology life support systems /CELSS/ for long-duration, manned missions
[ASME PAPER 79-ENAS-27] A80-15251
Controlled-environment agricultural systems as food sources for large space habitats
[ASME PAPER 79-ENAS-30] A80-15254
Food technology in space habitats
[ASME PAPER 79-ENAS-31] A80-15255

SPACE FLIGHT STRESS
Physiological characteristics of psychic models of hypo- and hyper-gravity
A80-16467

SPACE PERCEPTION
Humans deprived of normal binocular vision have binocular interactions tuned to size and orientation
A80-13864
The importance of pattern information for the resolution of depth-ambiguous apparent motion
A80-13999
Binocular and monocular stimuli for motion in depth - Changing-disparity and changing-size feed the same motion-in-depth stage
A80-17059

SPACE PROCESSING
Food technology in space habitats
[ASME PAPER 79-ENAS-31] A80-15255
Evaluation of heat convection and flow front influence on electrophoresis of biological substances in space flight conditions
[IAF PAPER 79-ST-17] A80-17067

SPACE RATIONS
Food technology in space habitats
[ASME PAPER 79-ENAS-31] A80-15255

SPACE SHUTTLE PAYLOADS
Development of a Space Shuttle plant growth unit
[ASME PAPER 79-ENAS-19] A80-15243
The Life Sciences Flight Experiments Program - An update
[AAS PAPER 79-250] A80-16430

SPACE SHUTTLES
Spacelab environment investigation by mass spectrometer
[BMFT-FB-W-78-02] N80-13774

SPACE SUITS
High-pressure protective systems technology
[ASME PAPER 79-ENAS-15] A80-15240
/Hard Hat/ EVA, personal equipment to support large scale construction in space
[ASME PAPER 79-ENAS-43] A80-15266

SPACEBORNE EXPERIMENTS
Development of a Space Shuttle plant growth unit
[ASME PAPER 79-ENAS-19] A80-15243
The Life Sciences Flight Experiments Program - An update
[AAS PAPER 79-250] A80-16430
Experiments for dedicated life science missions
[AAS PAPER 79-251] A80-16431

SPACECRAFT CABIN ATMOSPHERES
Bosch - An alternate CO2 reduction technology
[ASME PAPER 79-ENAS-32] A80-15256
EDC - A regenerable CO2 removal subsystem for an enhanced capability orbiter
[ASME PAPER 79-ENAS-34] A80-15258

SPACECRAFT CONTAMINATION
Design and development of a trace contaminant removal canister for Spacelab
[ASME PAPER 79-ENAS-16] A80-15241
Spacelab environment investigation by mass spectrometer
[BMFT-FB-W-78-02] N80-13774

SPACECRAFT DESIGN
Design and development of a trace contaminant removal canister for Spacelab
[ASME PAPER 79-ENAS-16] A80-15241
EDC - A regenerable CO2 removal subsystem for an enhanced capability orbiter
[ASME PAPER 79-ENAS-34] A80-15258

SPACECRAFT ENVIRONMENTS
Recycling plant, human and animal wastes to plant nutrients in a closed ecological system
[ASME PAPER 79-ENAS-29] A80-15253
Controlled-environment agricultural systems as food sources for large space habitats
[ASME PAPER 79-ENAS-30] A80-15254
Environmental systems for aquatic animal studies in the Shuttle era
[ASME PAPER 79-ENAS-45] A80-15268
Applications of the thermoelectrically integrated membrane evaporator subsystem
[ASME PAPER 79-ENAS-48] A80-15271
A closed system: Man-higher plants /four-month experiment/ --- Russian book
A80-16393
Evaluation and comparison of alternative designs for water/solid-waste processing systems for spacecraft
[NASA-CR-162492] N80-12739
A preliminary research plan for development of a photosynthetic link in a closed ecological life support system
[NASA-CR-160399] N80-13758
Spacelab environment investigation by mass spectrometer
[BMFT-FB-W-78-02] N80-13774

SPACELAB
Spacelab environment investigation by mass spectrometer
[BMFT-FB-W-78-02] N80-13774

SPACELAB PAYLOADS
Design and development of a trace contaminant removal canister for Spacelab
[ASME PAPER 79-ENAS-16] A80-15241
Experiments for dedicated life science missions
[AAS PAPER 79-251] A80-16431

SPECTRAL CORRELATION
Analysis of the mean number of intersections of the zero level by physiological processes
A80-16469

SPECTRUM ANALYSIS
Analysis of the mean number of intersections of the zero level by physiological processes
A80-16469

SPRINGS (ELASTIC)

On the optimization of spring elasticity, damping, and inertia effects on the spring loading of a control stick [FB-37] N80-13776

STATIC TESTS

Development and description of a device for static strength measurement in the armed forces examination and entrance station [AD-A068684] N80-13765

STATISTICAL ANALYSIS

Statistical representation of electrocardiographic body surface maps for feature identification data compression and classification N80-12728

STEREOTELEVISION

A field of view simulator equipped for perspective transformation on a television raster [FB-34] N80-13775

STIMULANT

Eye movements in paralyzed cats induced by drugs and sympathetic stimulation A80-13591

STRATOSPHERE RADIATION

Radiation dose rate of a biological object from cosmic rays in the stratosphere and at the height of artificial earth satellites A80-17100

STRESS (PHYSIOLOGY)

T-waves in the exercise ECG - Their location and occurrence A80-13263

Ergonomical studies about the superposition of control activity and mechanical vibration A80-13272

Plasma volume during stress in man - Osmolality and red cell volume A80-13506

Some aspects of processing physiological data A80-16480

SUBMARINES

A comparison of control simulators having force inputs and displacement feedback. Applications to the manual control of underwater vehicles [FB-38] N80-13777

SURVIVAL

Investigation of the psychophysiological characteristics of man under extreme conditions A80-16468

SWEAT COOLING

Influence of air velocity and heat acclimation on human skin wettedness and sweating efficiency A80-16454

SYMBOLS

Rational ways to increase pictographic symbol discriminability N80-12734

SYMPATHETIC NERVOUS SYSTEM

Eye movements in paralyzed cats induced by drugs and sympathetic stimulation A80-13591

SYSTEMS ENGINEERING

Closed-ecology life support systems /CELSS/ for long-duration, manned missions [ASME PAPER 79-ENAS-27] A80-15251

T

TARGET ACQUISITION

Detection of different target types in realistic terrain --- visual air to ground recognition [AD-A072973] N80-12733

TARGET RECOGNITION

Detection of different target types in realistic terrain --- visual air to ground recognition [AD-A072973] N80-12733

TASK COMPLEXITY

On the interaction between system and task parameters through continuous manual control [FB-42] N80-13780

TECHNOLOGY ASSESSMENT

Innovations in transportation engineering and human factors A80-13186

TECHNOLOGY UTILIZATION

Food technology in space habitats [ASME PAPER 79-ENAS-31] A80-15255

TEMPERATURE CONTROL

Thermogenic control during exercise in a cold environment A80-13507

The use of a positive displacement air cycle machine in a closed-loop environmental control system [ASME PAPER 79-ENAS-6] A80-15231

TEMPERATURE EFFECTS

Effects of cold exposure on circadian rhythm of body temperature in rats and rabbits A80-13374

TENSILE STRESS

Active responses of the internal carotid artery to stretching A80-17285

TERRAIN

Detection of different target types in realistic terrain --- visual air to ground recognition [AD-A072973] N80-12733

THERAPY

Resuscitation from hypothermia: A literature review [AD-A069093] N80-13764

THERMOELECTRIC GENERATORS

Applications of the thermoelectrically integrated membrane evaporator subsystem [ASME PAPER 79-ENAS-48] A80-15271

THERMOREGULATION

Investigation of thermoregulatory mechanisms A80-13476

Thermogenic control during exercise in a cold environment A80-13507

Microwaves - Effect on thermoregulatory behavior in rats A80-13590

Current problems of hypotheray A80-14259

Catecholamines and chemical thermoregulation during cold acclimation A80-14260

THICKNESS

Apparatus for measurement of tissue compliance [BMFT-FB-W-78-05] N80-13768

THREE DIMENSIONAL MOTION

A field of view simulator equipped for perspective transformation on a television raster [FB-34] N80-13775

THRESHOLDS (PERCEPTION)

Humans deprived of normal binocular vision have binocular interactions tuned to size and orientation A80-13864

TIME RESPONSE

Operator eye-movement reaction during tracking of discrete stimuli with random time and space distribution A80-16474

TISSUES (BIOLOGY)

General characteristics of the rheological properties of the soft tissues of the human body using local cycling loading measurements and a simple phenomenological model of these properties A80-13243

Apparatus for measurement of tissue compliance [BMFT-FB-W-78-05] N80-13768

TOLERANCES (PHYSIOLOGY)

Investigation of thermoregulatory mechanisms A80-13476

TOMOGRAPHY

The place of computerized axial tomography /CAT/ in the examination of flight crews A80-15629

TOXIC HAZARDS

A procedure for electronically monitoring animal response parameters using the rotating wheel --- aircraft fire hazard application A80-13322

TRACE CONTAMINANTS

Design and development of a trace contaminant removal canister for Spacelab [ASME PAPER 79-ENAS-16] A80-15241

TRAINING EVALUATION

Autogenic training as a method of stimulating operator work capacity A80-16465

Method for generalizing operator performance factor evaluation in multidimensional tracking problems A80-16473

TRAINING SIMULATORS
Pursuit-tracking simulator with adaptive pseudorandom program of marker trajectory A80-16466

TRANSPORTATION
Innovations in transportation engineering and human factors A80-13186

U

ULTRASONIC TESTS
Apparatus for measurement of tissue compliance [BMFT-FB-W-78-05] N80-13768

ULTRAVIOLET ABSORPTION
Uracil in carbonaceous meteorites A80-16068

ULTRAVIOLET RADIATION
Photosynthetic carbon reduction by seagrasses exposed to ultraviolet A radiation [NASA-CR-160397] N80-13757

URACIL
Uracil in carbonaceous meteorites A80-16068

URINALYSIS
Investigation of certain electrophysiological and biochemical parameters in hypoxia testing at a simulated altitude of 5500 m A80-15634

V

VEINS
In vivo investigation of the elastohysteresis properties of the aorta and its branches A80-17288

VERTEBRAL COLUMN
The physiopathology of vertebral pain in helicopter pilots A80-15633

VERTICAL MOTION
Vertical stabilization of a quadriped walking machine A80-17262

VIBRATION EFFECTS
Ergonomical studies about the superposition of control activity and mechanical vibration A80-13272
The physiopathology of vertebral pain in helicopter pilots A80-15633

VISCOUS DAMPING
On the optimization of spring elasticity, damping, and inertia effects on the spring loading of a control stick [FB-37] N80-13776

VISUAL DISCRIMINATION
Choice reaction time to movement of eccentric visual targets during concurrent rotary acceleration A80-14000
Error dynamics of operator recognition of visual images A80-16464
Human operator eye-lid movement reaction during intense visual tasks involving the detection and tracking of visual signals A80-16470
Detection of different target types in realistic terrain --- visual air to ground recognition [AD-A072973] N80-12733

VISUAL PERCEPTION
Humans deprived of normal binocular vision have binocular interactions tuned to size and orientation A80-13864
The importance of pattern information for the resolution of depth-ambiguous apparent motion A80-13999
Visual information and vision of robots --- Russian book A80-14099
Processing of direction and magnitude by the saccadic eye-movement system A80-17060

A field of view simulator equipped for perspective transformation on a television raster [FB-34] N80-13775

VISUAL SIGNALS
Error dynamics of operator recognition of visual images A80-16464
Human operator eye-lid movement reaction during intense visual tasks involving the detection and tracking of visual signals A80-16470

VISUAL STIMULI
Choice reaction time to movement of eccentric visual targets during concurrent rotary acceleration A80-14000
Operator eye-movement reaction during tracking of discrete stimuli with random time and space distribution A80-16474

W

WALKING
Integrated walking robot simulation and modelling A80-14801

WALKING MACHINES
Separation of motions in the problem of stabilizing biped walking A80-14382
Vertical stabilization of a quadriped walking machine A80-17262

WASTE TREATMENT
Evaluation and comparison of alternative designs for water/solid-waste processing systems for spacecraft [NASA-CR-162492] N80-12739

WASTE UTILIZATION
Recycling plant, human and animal wastes to plant nutrients in a closed ecological system [ASME PAPER 79-ENAS-29] A80-15253
Controlled-environment agricultural systems as food sources for large space habitats [ASME PAPER 79-ENAS-30] A80-15254

WATER BALANCE
Analysis of metabolic energy utilization in the Skylab astronauts [NASA-CR-160402] N80-13770
Skylab water balance error analysis [NASA-CR-160403] N80-13771

WATER INTAKES
Effects of long-term repetitive exposure to centrifugation of 2G on developing rat A80-13373

WATER RECLAMATION
Applications of the thermoelectrically integrated membrane evaporator subsystem [ASME PAPER 79-ENAS-48] A80-15271

WEIGHTLESSNESS SIMULATION
Physiological characteristics of psychic models of hypo- and hyper-gravity A80-16467

WIND EFFECTS
Influence of air velocity and heat acclimation on human skin wettedness and sweating efficiency A80-16454

WORK CAPACITY
Seasonal variation in work performance and heart rate response to exercise - A study of 1,835 middle-aged men A80-13274
Prediction of the physical work capacity of persons at mountain altitudes A80-14165
Maximal work capacity of women during acute hypoxia A80-16456
Autogenic training as a method of stimulating operator work capacity A80-16465

WORK-REST CYCLE
Autogenic training as a method of stimulating operator work capacity A80-16465

WORKLOADS (PSYCHOPHYSIOLOGY)
Autogenic training as a method of stimulating operator work capacity A80-16465

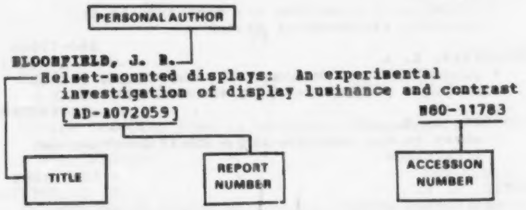
X

X RAY ABSORPTION
Determining biological fine structure by differential absorption of soft X-ray
[BNL-26282] N80-13760

PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 204)* MARCH 1980

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ANDRES, R. O.
A postural measurement system for induced body sway assessment
N80-12729

ANDREW, J.
Analysis of exercise-induced R wave amplitude changes in detection of coronary artery disease in asymptomatic men with left bundle branch block
A80-15997

AUFFRET, R.
The physiopathology of vertebral pain in helicopter pilots
A80-15633

B

BABIIAK, V. I.
Characteristics of oculomotor responses and their sensory components during simulation of low-altitude flights
A80-14166

BARBER, P. W.
Electromagnetic absorption in multilayered cylindrical models of man
A80-13216

BARRY, J. D.
Time-resolved spectrometry of in vivo firefly bioluminescence emissions
A80-16793

BELAIA, E. V.
General characteristics of the rheological properties of the soft tissues of the human body using local cycling loading measurements and a simple phenomenological model of these properties
A80-13243

BELLEHSEN, D. H.
Numerical solution of a hyperbolic system of conservation laws for blood flow in the arterial tree
N80-12726

BEVERLEY, K. I.
Binocular and monocular stimuli for motion in depth - Changing-disparity and changing-size feed the same motion-in-depth stage
A80-17059

BIRBARA, P. J.
Development of an improved Sabatier reactor
[ASME PAPER 79-ENAS-36] A80-15260

BLAIR, J. L.
Design and development of a trace contaminant removal canister for Spacelab
[ASME PAPER 79-ENAS-16] A80-15241

BLOOM, K. R.
Echocardiographic recognition of atrioventricular valve stenosis associated with endocardial cushion defect - Pathologic and surgical correlates
A80-15998

BOENING, D.
Effects and post-effects of two-hour exhausting exercise on composition and gas transport functions of blood
A80-13273

BOLLER, H. E.
A comparison of control simulators having force inputs and displacement feedback. Applications to the manual control of underwater vehicles
[PB-38] N80-13777

BOLOTIN, IU. V.
Separation of motions in the problem of stabilizing biped walking
A80-14382

BORDIUG, B. A.
Vertical stabilization of a quadriped walking machine
A80-17262

BOUIS, D.
Interdependence between the saccadic and the continuous eye movement control systems
A80-14797

BOYNTON, C. K., JR.
Applications of the thermoelectrically integrated membrane evaporator subsystem
[ASME PAPER 79-ENAS-48] A80-15271

BRADSHAW, H. H.
The effects of context on the structure of pain
N80-13761

BRENNAN, L. F.
Medical applications of aerospace technology
A80-14793

BROUILLET, A. O.
Applications of the thermoelectrically integrated membrane evaporator subsystem
[ASME PAPER 79-ENAS-48] A80-15271

BURNS, J. W.
Use of microspheres in measurement of regional blood flows during +Gz stress
A80-16452

C

CABANIS, E. A.
The place of computerized axial tomography /CAT/ in the examination of flight crews
A80-15629

CANDAS, V.
Influence of air velocity and heat acclimation on human skin wettedness and sweating efficiency
A80-16454

CARDEN, J. L.
Guiding the development of a controlled ecological life support system
[NASA-CR-162452] N80-12735

CHUSOV, IU. N.
Investigation of thermoregulatory mechanisms
A80-13476

CLARK, D. C.
Bosch - An alternate CO2 reduction technology
[ASME PAPER 79-ENAS-32] A80-15256

CLEVENSON, S. A.
Effect of noise spectra and a listening task upon passenger annoyance in a helicopter interior noise environment
[NASA-TP-1590] N80-13769

COHN, K.
Unreliability of exercise-induced R wave changes as indexes of coronary artery disease
A80-15996

CONSTANTINESCU, L.
Investigation of certain electrophysiological and biochemical parameters in hypoxia testing at a simulated altitude of 5500 m
A80-15634

CONVERTINO, V. A.
Plasma volume during stress in man - Osmolality and red cell volume
A80-13506

CORRICK, G. E.
Detection of different target types in realistic terrain
[AD-A072973] N80-12733

COTE, J.
Plasma catecholamines and cardiovascular responses to cold and mental activity
A80-16455

CRAMER, R.
Anti-suffocation valve Bendix type no. 3267010-0101
[AD-A068927] N80-13772

CULLER, V. H.
Simultaneous muscle force and displacement transducer
[NASA-CASE-NPO-14212-1] N80-12730

CUMPANASU, V.
Investigation of certain electrophysiological and biochemical parameters in hypoxia testing at a simulated altitude of 5500 m
A80-15634

CURTHOYS, I. S.
The importance of pattern information for the resolution of depth-ambiguous apparent motion
A80-13999

D

DELAHAYE, R. P.
The place of computerized axial tomography /CAT/ in the examination of flight crews
A80-15629

The physiopathology of vertebral pain in helicopter pilots
A80-15633

DENEE, J. H.
The importance of continuous electrocardiogram recording in conduction disorders in flight crews
A80-15635

DEVIANIN, E. A.
Integrated walking robot simulation and modelling
A80-14801

DONGES, E.
The automobile driving simulator for anthropogenic research
[FB-41] N80-13779

DOTSENKO, M. A.
Water-electrolyte metabolism and the function of human kidneys at mountain altitudes
A80-13477

DUNBAR, J.
Anti-suffocation valve Bendix type no. 3267010-0101
[AD-A068927] N80-13772

DURNEY, C. H.
Electromagnetic absorption in multilayered cylindrical models of man
A80-13216

E

ERIKSSEN, J.
Seasonal variation in work performance and heart rate response to exercise - A study of 1,835 middle-aged men
A80-13274

EVANS, A. K.
Statistical representation of electrocardiographic body surface maps for feature identification data compression and classification
N80-12728

F

FARRELL, R. H.
Experiments for dedicated life science missions
[AAS PAPER 79-251] A80-16431

FEHER, R. R.
A procedure for electronically monitoring animal response parameters using the rotating wheel
A80-13322

FELDSTEIN, C.
Simultaneous muscle force and displacement transducer
[NASA-CASE-NPO-14212-1] N80-12730

FENDER, D. H.
Processing of direction and magnitude by the saccadic eye-movement system
A80-17060

FILIPCZAK, R. A.
A procedure for electronically monitoring animal response parameters using the rotating wheel
A80-13322

FISCHER, J. R., JR.
T-waves in the exercise ECG - Their location and occurrence
A80-13263

FOMIN, S. V.
Artificial sensory organs: Problems of modeling sensory systems
A80-16461

FREEDOM, R. M.
Echocardiographic recognition of atrioventricular valve stenosis associated with endocardial cushion defect - Pathologic and surgical correlates
A80-15998

FROLOV, M. V.
Error dynamics of operator recognition of visual images
A80-16464

Analysis of the mean number of intersections of the zero level by physiological processes
A80-16469

FUJIWARA, M.
Relationship between recovery and hypothermia induced by centrifugation in rats
A80-13372

Effects of long-term repetitive exposure to centrifugation of 2G on developing rat
A80-13373

G

GASSET, G.
Biological investigations carried out in balloons
A80-13451

GERHARD, W.
Apparatus for measurement of tissue compliance
[BMFT-FB-W-78-05] N80-13768

GERKEEN-GUBANOV, G. V.
Integrated walking robot simulation and modelling
A80-14801

GRAYBIEL, A.
Motion sickness susceptibility during rotation at 30 rpm in free-fall parabolic flight
A80-17054

GREEN, P. A.
Rational ways to increase pictographic symbol discriminability
N80-12734

GREENLEAF, J. E.
Plasma volume during stress in man - Osmolality and red cell volume
A80-13506

GRIGOREV, A. I.
Water-electrolyte metabolism and the function of human kidneys at mountain altitudes
A80-13477

GRIMAK, L. P.
Physiological characteristics of psychic models of hypo- and hyper-gravity
A80-16467

GRINEVICH, V. A.
Effect of human exposure to a nitrogen-oxygen environment at 5-12 kgf/sq cm on certain indices of the higher nervous activity
A80-14258

GUILLAUMAT, L.
The place of computerized axial tomography /CAT/ in the examination of flight crews
A80-15629

GULIAN, S. A.
Effect of human exposure to a nitrogen-oxygen environment at 5-12 kgf/sq cm on certain indices of the higher nervous activity
A80-14258

GURFINKEL, V. S.
Integrated walking robot simulation and modelling
A80-14801

GURGENIDZE, A. G.
Foundation of hyperbaric physiology
A80-13526

H

HALLICK, T. M.
Bosch - An alternate CO2 reduction technology
[ASME PAPER 79-ENAS-32] A80-15256

HAMERMAN, J. A.
Choice reaction time to movement of eccentric visual targets during concurrent rotary acceleration
A80-14000

HARNETT, R. M.
Resuscitation from hypothermia: A literature review
[AD-A069093] N80-13764

HARRISON, D. C.
Medical applications of aerospace technology
A80-14793

HARTMAN, P.
Aviation night vision goggle
[AD-A073296] N80-13773

HARWERTH, R. S.
Humans deprived of normal binocular vision have binocular interactions tuned to size and orientation
A80-13864

HEEDT, P.
Effects and post-effects of two-hour exhausting exercise on composition and gas transport functions of blood
A80-13273

HEISING, M.
A field of view simulator equipped for perspective transformation on a television raster
[FB-34] N80-13775

HEITMAN, J. M.
Time-resolved spectrometry of in vivo firefly bioluminescence emissions
A80-16793

HELBIG, R.
Ergonomical studies about the superposition of control activity and mechanical vibration
A80-13272

HEPP, W.
Apparatus for measurement of tissue compliance
[BMFT-FB-W-78-05] N80-13768

HEPPNER, D. B.
Bosch - An alternate CO2 reduction technology
[ASME PAPER 79-ENAS-32] A80-15256
Development of the electrochemically regenerable carbon dioxide absorber for portable life support system application
[ASME PAPER 79-ENAS-33] A80-15257

HERTZ, B. G.
Eye movements in paralyzed cats induced by drugs and sympathetic stimulation
A80-13591

HIRAKAWA, A.
Parameter estimation of radiocardiogram using a minicomputer
A80-14798

HOFFMAN, R. B.
Environmental systems for aquatic animal studies in the Shuttle era
[ASME PAPER 79-ENAS-45] A80-15268

HONG, S.-I.
Thermogenic control during exercise in a cold environment
A80-13507

HOPKIRK, A.
T-waves in the exercise ECG - Their location and occurrence
A80-13263

HOPKIRK, C.
Analysis of exercise-induced R wave amplitude changes in detection of coronary artery disease in asymptomatic men with left bundle branch block
A80-15997

HORVATH, S. M.
Maximal work capacity of women during acute hypoxia
A80-16456

HOU, R. L.
Processing of direction and magnitude by the saccadic eye-movement system
A80-17060

HUNT, S. R., JR.
Environmental systems for aquatic animal studies in the Shuttle era
[ASME PAPER 79-ENAS-45] A80-15268

I

IBA-ZIZEN, M. T.
The place of computerized axial tomography /CAT/ in the examination of flight crews
A80-15629

ILIUCHENOK, R. IU.
Memory and adaptation
A80-14098

ISAULOV, IU. F.
Autogenic training as a method of stimulating operator work capacity
A80-16465

ISKANDER, M. F.
Electromagnetic absorption in multilayered cylindrical models of man
A80-13216

IVANOVA, V. D.
In vivo investigation of the elastohysteresis properties of the aorta and its branches
A80-17288

J

JAGOW, R. B.
Design and development of a trace contaminant removal canister for Spacelab
[ASME PAPER 79-ENAS-16] A80-15241

JENKER, W.
Effects and post-effects of two-hour exhausting exercise on composition and gas transport functions of blood
A80-13273

JOBIN, M.
Plasma catecholamines and cardiovascular responses to cold and mental activity
A80-16455

JONES, N. L.
Difference between end-tidal and arterial P/CO2/ in exercise
A80-13505

K

KAMEI, E.
Relationship between recovery and hypothermia induced by centrifugation in rats
A80-13372
Effects of long-term repetitive exposure to centrifugation of 2G on developing rat
A80-13373

KANE, J. W.
Difference between end-tidal and arterial P/CO2/ in exercise
A80-13505

KAREL, M.
Food technology in space habitats
[ASME PAPER 79-ENAS-31] A80-15255

KATYS, G. P.
Visual information and vision of robots
A80-14099

KEISER, B.
T-waves in the exercise ECG - Their location and occurrence
A80-13263

KENNEDY, R. S.
Reliability, validity and application of an improved scale for assessment of motion sickness severity
[AD-A069130] N80-13766

KHACHATURIANTS, L. S.
Error dynamics of operator recognition of visual images
A80-16464

KNAPIK, J.
Development and description of a device for static strength measurement in the armed forces examination and entrance station
[AD-A068684] N80-13765

KONONENKO, V. S.
Interhemispheric relationships of monoamine oxidase activity and norepinephrine content in the cortical centers of the skin and motor analyzers in the human brain
A80-14257

KOROLKOV, V. I.
Water-electrolyte metabolism and the function of human kidneys at mountain altitudes
A80-13477

KOWAL, D.
Development and description of a device for static strength measurement in the armed forces examination and entrance station
[AD-A068684] N80-13765

KOZLOVSKII, E. A.
Determination of psychophysiological reaction norms of a pilot during work
A80-16472

Method for generalizing operator performance factor evaluation in multidimensional tracking problems
A80-16473

KOZYREVSKAIA, G. I.
Water-electrolyte metabolism and the function of human kidneys at mountain altitudes
A80-13477

KRIKORIAN, A. D.
Problems and potentialities of cultured plant cells in retrospect and prospect
A80-15225

KRING, G.
Environmental systems for aquatic animal studies in the Shuttle era
[ASME PAPER 79-ENAS-45] A80-15268

KRUEGER, W.
On the optimization of spring elasticity, damping, and inertia effects on the spring loading of a control stick
[FB-37] N80-13776

A comparison of control simulators having force inputs and displacement feedback. Applications to the manual control of underwater vehicles
[FB-38] N80-13777

KUCHUK, G. A.
Foundation of hyperbaric physiology
A80-13526

KUPPAHL, G.
Spacelab environment investigation by mass spectrometer
[BMFT-FB-W-78-02] N80-13774

KUSHPIL, V. I.
Calculation of the surface on which the corneal flash is located with application to the development of a system for recording eye movement
A80-13859

KUWAHARA, M.
Parameter estimation of radiocardiogram using a minicomputer
A80-14798

KUZNETSOV, P. I.
Mathematical model of respiratory rhythm generation
A80-16602

KUZNETSOV, V. G.
Integrated walking robot simulation and modelling
A80-14801

KYZHIN, M. I.
In vivo investigation of the elastohysteresis properties of the aorta and its branches
A80-17288

L

LABRIE, A.
Plasma catecholamines and cardiovascular responses to cold and mental activity
A80-16455

LANE, C. R.
Time-resolved spectrometry of in vivo firefly bioluminescence emissions
A80-16793

LAUGHLIN, M. H.
Use of microspheres in measurement of regional blood flows during +Gz stress
A80-16452

LAWLESS, J. G.
Quantification of monocarboxylic acids in the Murchison carbonaceous meteorite
A80-13549

LEATHERWOOD, J. D.
Effect of noise spectra and a listening task upon passenger annoyance in a helicopter interior noise environment
[NASA-TP-1590] N80-13769

LEBEDEVA, N. N.
Physiological characteristics of psychic models of hypo- and hyper-gravity
A80-16467

Operator eye-movement reaction during tracking of discrete stimuli with random time and space distribution
A80-16474

LEBLANC, J.
Plasma catecholamines and cardiovascular responses to cold and mental activity
A80-16455

LEGUAY, G.
The importance of continuous electrocardiogram recording in conduction disorders in flight crews
A80-15635

LENSKII, A. V.
Integrated walking robot simulation and modelling
A80-14801

LEONARD, J. I.
Analysis of metabolic energy utilization in the Skylab astronauts
[NASA-CR-160402] N80-13770

Skylab water balance error analysis
[NASA-CR-160403] N80-13771

LEVCHENKO, N. P.
Some aspects of processing physiological data
A80-16480

LEVI, D. M.
Humans deprived of normal binocular vision have binocular interactions tuned to size and orientation
A80-13864

LEWIS, G. W.
Simultaneous muscle force and displacement transducer
[NASA-CASE-NPO-14212-1] N80-12730

LIBERT, J. P.
Influence of air velocity and heat acclimation on human skin wettedness and sweating efficiency
A80-16454

LINSENMEIER, R. A.
Eye movements in paralyzed cats induced by drugs and sympathetic stimulation
A80-13591

LISOVSKII, G. M.
A closed system: Man-higher plants /four-month experiment/
A80-16393

LITTLES, J. W.
Design and development of a trace contaminant removal canister for Spacelab
[ASME PAPER 79-ENAS-16] A80-15241

LOTZ, W. G.
Effects of hypophysectomy and dexamethasone on rat adrenal response to microwaves
A80-16457

LOXSON, F. M.
Use of microspheres in measurement of regional blood flows during +Gz stress
A80-16452

LU, S.-T.
Microwaves - Effect on thermoregulatory behavior in rats
A80-13590

LUCE, R. S.
A study of the reduction of carbon dioxide in a silent electric discharge
[ASME PAPER 79-ENAS-13] A80-15238

Development of a Space Shuttle plant growth unit
[ASME PAPER 79-ENAS-19] A80-15243

LUCZAK, H.
Ergonomical studies about the superposition of control activity and mechanical vibration
A80-13272

LUKIANOVA, N. V.
Investigation of the psychophysiological characteristics of man under extreme conditions
A80-16468

M

MACGREGOR, R. J.
A possible mechanism for the influence of electromagnetic radiation on neuroelectric potentials
A80-16575

MAINE, R. B.
Development of a Space Shuttle plant growth unit
[ASME PAPER 79-ENAS-19] A80-15243

MAISCH, E.
Spacelab environment investigation by mass spectrometer
[BMFT-FB-W-78-02] N80-13770

MAKSIMOV, A. L.
Prediction of the physical work capacity of persons at mountain altitudes
A80-14165

MALACHOWSKI, M. J.
Effects of ionizing radiation on the light sensing elements of the retina
[LBL-5683] N80-13767

MAMISASHVILI, V. A.
Active responses of the internal carotid artery to stretching
A80-17285

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA

Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario Nikis, 75738 Paris CEDEX 15, France.

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 205)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in March 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, at the price $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 212 reports, articles and other documents announced during March 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche(1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $65.00 domestic; $130.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

AEROSPACE MEDICINE AND BIOLOGY *A Continuing Bibliography (Suppl. 205)*

APRIL 1980

IAA ENTRIES

A80-17686 * Proton movements in response to a light-driven electrogenic pump for sodium ions in Halobacterium halobium membranes. R. V. Greene (Cornell University, Ithaca, N.Y.) and J. K. Lanyi (NASA, Ames Research Center, Moffett Field, Calif.). *Journal of Biological Chemistry,* vol. 254, Nov. 10, 1979, p. 10986-10994. 35 refs. NSF Grant No. 76-09718; Grant No. NIH-GM-23225A.

A80-17711 Visual cortical neurons - Are bars or gratings the optimal stimuli. D. G. Albrecht, R. L. De Valois, and L. G. Thorell (California, University, Berkeley, Calif.). *Science,* vol. 207, Jan. 4, 1980, p. 88-90. 15 refs. NSF Grant No. BNS-74-02621; Grants No. NIH-MH-10878; No. PHS-EY-00014.

The responses of single cells in the striate cortex of the macaque monkey and the cat are examined to determine the characteristics of their visual cortical neurons. To assess whether (1) bar and edge detectors or (2) cells selective for certain spatial frequencies are more accurate in terms of the functional description, the selectivity and the responsivity-sensitivity of these neurons to bars of various widths and gratings of various spatial frequencies, were measured. All of the cells recorded from, were considerably more selective along the dimension of spatial-frequency than along the dimension of bar width. Further, most were more responsive and sensitive to the grating of optimal frequency than to the bar of optimal width.
C.F.W.

A80-17726 Evaluation of human strain during interrupted exposure to vibration (Beurteilung der Beanspruchung des Menschen bei unterbrochener Schwingungsexposition). W. Scheibe and W. Rohmert (Darmstadt, Technische Hochschule, Darmstadt, West Germany). *European Journal of Applied Physiology,* vol. 42, no. 4, 1979, p. 209-225. 36 refs. In German.

An investigation of the psychophysical reactions to stochastic vibrations transmitted in vertical direction to a man in a sitting position in simulated experiments under laboratory conditions is presented. Indicators of bottleneck situations in functional systems of the organism and strain measurements allow evaluation of the recreation efficiency of interruptions in exposure time. The special meaning of the distribution and the frequency rate of interruptions can be illustrated by the time variance of the strain processes of selected muscles. A significant correlation results between the degree of muscle fatigue and the period of uninterrupted exposure so that numerous interruptions of vibration exposure should be considered as a useful guideline for design in ergonomics.

A80-17741 * Review of cell aging in Drosophila and mouse. J. Miquel (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, Calif.), A. C. Economos (San Jose State University, San Jose, Calif.), K. G. Bensch (Stanford University, Stanford, Calif.), H. Atlan (Paris VI, Université, Paris, France), and J. E. Johnson, Jr. (National Institutes of Health, National Institute on Aging, Baltimore, Md.). *Age,* vol. 2, July 1979, p. 78-88. 70 refs.

A80-17986 # Study of fungal phenotypes after exposure to space flight parameters (Izuchenie fenotipov gribov posle kosmicheskogo poleta). P. A. Volz. *Kosmicheskie Issledovaniia,* vol. 17, Nov.-Dec. 1979, p. 920-926. 21 refs. In Russian.

A80-18081 # Physiological regulation of oxygen transport to muscles /from results of mathematical analysis of experimental data/ (O fiziologicheskoi reguliatsii transporta kisloroda v myshtsakh /po rezul'tatam matematicheskogo analiza eksperimental'nykh dannykh/). E. G. Liabakh (Akademia Nauk SSSR, Institut Fiziologii, Leningrad, USSR) and K. P. Ivanov (Akademiia Nauk Ukrainskoi SSR, Institut Kibernetiki, Kiev, Ukrainian SSR). *Akademiia Nauk SSSR, Doklady,* vol. 248, no. 2, 1979, p. 488-491. 7 refs. In Russian.

Progress in mathematics and computer technology has markedly increased the possibility of analyzing oxygen-diffusion processes in muscles. The paper outlines a mathematical analysis pertaining to the regulation of oxygen supply to the muscles of warm-blooded animals, based on in vivo measurements of basic morphological parameters of micro-circulation. Attention is given to calculating the oxygen saturation of a muscle at rest and during muscular work under conditions of combined work and increased number of operating capillaries or under conditions of accelerated capillary blood flow. The calculations are performed using a three-dimensional model of oxygen diffusion in muscles.
S.D.

A80-18082 # Temperature compensation of the metabolism of serotonin in the brain of hibernating mammals (Temperaturnaia kompensatsiia metabolizma serotonina v mozge zimospiashchikh). N. K. Popova, N. N. Voitenko, and A. D. Slonim (Akademiia Nauk SSSR, Institut Tsitologii i Genetiki, Novosibirsk, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 248, no. 2, 1979, p. 492-494. 11 refs. In Russian.

Results are presented for a study of the temperature dependence of oxidative deamination of serotonin in the brain of red-cheeked marmots at the initial stage of hibernation, during hibernation, and after awakening. The experiments were conducted on males of the Citellus erythrogenys Brandt strain. It is likely that in hibernating mammals with decreased body temperature, the mechanisms responsible for the temperature compensation of metabolism are to a certain extent similar to those for poikilothermic animals. S.D.

A80-18250 # **A new engineering approach to motion cueing technology.** H. Jaslow (Gould, Inc., Melville, N.Y.). *American Institute of Aeronautics and Astronautics, Aerospace Sciences Meeting, 18th, Pasadena, Calif., Jan. 14-16, 1980, Paper 80-0047.* 8 p. 10 refs.

A new and unique approach to motion simulation is presented which provides a simple, yet powerful, engineering tool. From a study of the physical mechanisms of sensory receptors, perceived sensation of motion can be quantified. With this quantification, a method is presented to evaluate and specify requirements for motion platforms. Calculations are made of real cue regimes vs. aircraft maneuvers and simulator excursion limits. (Author)

A80-18643 # **Static acoustic impedance profiles in auditory diagnosis.** P. W. Whaley (USAF, Institute of Technology, Wright-Patterson AFB, Ohio) and L. D. Zirkle (Oklahoma State University, Stillwater, Okla.). *American Society of Mechanical Engineers, Winter Annual Meeting, New York, N.Y., Dec. 2-7, 1979, Paper 79-WA/Bio-1.* 13 p. 6 refs. Members, $1.50; nonmembers, $3.00. NIH-supported research.

A study was carried out to determine the value in auditory diagnosis of static acoustic impedance (absence of middle ear muscle activity) plotted versus frequency. This is different from conventional impedance audiometry in that the inductance can be measured. An entirely new device (patents currently being pursued) was used to gather these data, not possible to obtain with conventional devices. Clinical data was obtained on both normal and pathological human subjects. The resulting data indicate that pathological conditions result in changes in the shape of the impedance profile which are characteristic of the particular disorder and well outside the range associated with normal ears. The authors feel that considerably more information can be detected from such an impedance profile based on their experience with frequency response properties of dynamic systems. More extensive data will be required to provide a definitive analysis of the value of this technique in diagnosis. (Author)

A80-18839 **The effect of character size on the legibility of numeric displays during vertical whole-body vibration.** C. H. Lewis and M. J. Griffin (Southampton, University, Southampton, England). *Journal of Sound and Vibration,* vol. 67, Dec. 22, 1979, p. 562-565. 5 refs. Research supported by the Ministry of Defence (Procurement Executive).

A80-18975 **Left ventricular relaxation and filling pattern in different forms of left ventricular hypertrophy - An echocardiographic study.** P. Hanrath, D. G. Mathey, R. Siegert, and W. Bleifeld (University Hospital, Hamburg, West Germany). *American Journal of Cardiology,* vol. 45, Jan. 1980, p. 15-23. 23 refs. Research supported by the Gesellschaft fur Strahlen- und Umweltforschung mbH.

A80-19023 **Proficiency maintenance and assessment in an instrument flight simulator.** D. O. Weitzman, M. L. Fineberg, P. A. Gade (U.S. Army, Research Institute, Alexandria, Va.), and G. L. Compton (U.S. Army, Fort Campbell, Ky.). *Human Factors,* vol. 21, Dec. 1979, p. 701-710. 10 refs. Army-supported research.

Transfer effects have been studied to evaluate the suitability of a high fidelity flight simulator (Device 2B24) for maintaining and assessing instrument proficiency among experienced Army helicopter pilots. Evidence in support of positive transfer was obtained by comparing pilots trained in the simulator with pilots trained in the aircraft (UH-1H) and with pilots trained in both. In addition, performance evaluation in the simulator accurately predicted performance in the aircraft. This study suggests that simulators of proven effectiveness can be used both to maintain and assess the proficiency of experienced pilots. (Author)

A80-19024 * **When day is done and shadows fall, we miss the airport most of all.** S. N. Roscoe (New Mexico State University, Las Cruces, N. Mex.). *Human Factors,* vol. 21, Dec. 1979, p. 721-731. 20 refs. NASA-Army-supported research.

Both the effectiveness of pilot training and the safety of flight can be influenced by the distribution of texture in the visual scene, the distance to which the eyes accommodate, and the associated shifts in the apparent size and distance of objects in central and peripheral vision. Studies reviewed and original results presented indicate that these factors are involved in various misjudgments and illusions experienced by pilots: (1) when searching for other airborne traffic or targets, (2) when making approaches to airports over water at night, (3) when breaking out of low clouds on a final approach to a landing by reference to head-up or head-down displays, and (4) when practicing simulated approaches and landings or air-to-surface weapon deliveries by reference to synthetically generated visual systems. (Author)

A80-19025 * **Mathematical concepts for modeling human behavior in complex man-machine systems.** G. Johannsen (Forschungsinstitut für Anthropotechnik, Werthhoven, West Germany) and W. B. Rouse (Illinois, University, Urbana, Ill.). *Human Factors,* vol. 21, Dec. 1979, p. 733-747. 73 refs. Grant No. NsG-2119.

Many human behavior (e.g., manual control) models have been found to be inadequate for describing processes in certain real complex man-machine systems. An attempt is made to find a way to overcome this problem by examining the range of applicability of existing mathematical models with respect to the hierarchy of human activities in real complex tasks. Automobile driving is chosen as a baseline scenario, and a hierarchy of human activities is derived by analyzing this task in general terms. A structural description leads to a block diagram and a time-sharing computer analogy. B.J.

A80-19100 # **Scientific biomedical studies during the flight of the first Bulgarian cosmonaut (Nauchnite mediko-biologichni izsledvaniia pri poleta s uchastieto na p'rviia b'lgarski kosmonaut).** K. Zlatarev. *B'lgarska Akademiia na Naukite, Spisanie,* no. 5, 1979, p. 28-32. In Bulgarian.

A80-19452 **A nonparametric model of detection of signals, observed by a human operator on a CRT screen in the presence of noise.** V. N. Budko, F. M. Klement'ev, and N. M. Novikova. *(Radiotekhnika i Elektronika,* vol. 23, Nov. 1978, p. 2439-2442.) *Radio Engineering and Electronic Physics,* vol. 23, Nov. 1978, p. 131-133. Translation.

A method is devised for taking into account the psychological factor during the operator observation of signals on a TV screen on a noise background. The method is based on the determination of the so-called 'working characteristic' which is defined as the dependence of the probability of signal detection on the intensity of the signal as the latter is observed on a noise background. The use of nonparametric criteria for such detection processes is discussed; a special feature of such detection is the fact that false-alarm probability is independent of the form of the noise distribution function. B.J.

A80-19850 * **Confidence regions of planar cardiac vectors.** S. Dubin, A. Herr, and P. Hunt (Drexel University, Philadelphia, Pa.). *Journal of Electrocardiology,* vol. 13, Jan. 1980, p. 7-10. 8 refs. Grant No. NsG-7494.

A method for plotting the confidence regions of vectorial data obtained in electrocardiology is presented. The 90%, 95% and 99% confidence regions of cardiac vectors represented in a plane are obtained in the form of an ellipse centered at coordinates corresponding to the means of a sample selected at random from a bivariate normal distribution. An example of such a plot for the frontal plane QRS mean electrical axis for 80 horses is also presented. A.L.W.

A80-20018 * **Space motion sickness.** J. L. Homick (NASA, Johnson Space Center, Medical Sciences Div., Houston, Tex.). *Acta Astronautica,* vol. 6, Oct. 1979, p. 1259-1272. 18 refs.

Research on the etiology, prediction, treatment and prevention of space motion sickness, designed to minimize the impact of this syndrome which was experienced frequently and with severity by individuals on the Skylab missions, on Space Shuttle crews is reviewed. Theories of the cause of space motion sickness currently under investigation by NASA include sensory conflict, which argues that motion sickness symptoms result from a mismatch between the total pattern of information from the spatial senses and that stored from previous experiences, and fluid shift, based upon the redistribution of bodily fluids that occurs upon continued exposure to weightlessness. Attempts are underway to correlate space motion sickness susceptibility to different provocative environments, vestibular and nonvestibular responses, and the rate of acquisition and length of retention of sensory adaptation. Space motion sickness countermeasures under investigation include various drug combinations, of which the equal combination of promethazine and ephedrine has been found to be as effective as the scopolomine and dexedrine combination, and vestibular adaptation and biofeedback training and autogenic therapy. A.L.W.

A80-20019 * **Exercise response to simulated weightlessness.** C. F. Sawin, J. A. Rummel, and M. C. Buderer (NASA, Johnson Space Center, Houston, Tex.). *Acta Astronautica,* vol. 6, Oct. 1979, p. 1273-1287. 14 refs.

Two bed rest analog studies of space flight were performed; one 14 d and the other 28 d in duration. Exercise response was studied in detail during the 28 d study and following both the 14 d and 28 d studies. This paper relates the results of these studies to physiologic changes noted during and following space flight. The most consistent change noted after both bed rest and space flight is an elevated heart rate during exercise. A second consistent finding is a postflight or postbed rest reduction in cardiac stroke volume. Cardiac output changes were variable. The inability to simulate inflight activity levels and personal exercise makes a direct comparison between bed rest and the results from specific space flights difficult. (Author)

A80-20020 * **A mathematical and experimental simulation of the hematological response to weightlessness.** S. L. Kimzey (NASA, Johnson Space Center, Houston, Tex.), J. I. Leonard (General Electric Co., Houston, Tex.), and P. C. Johnson (Baylor University, Houston, Tex.). *Acta Astronautica,* vol. 6, Oct. 1979, p. 1289-1303. 32 refs.

A mathematical model of erythropoiesis control was used to simulate the effects of bedrest and zero-g on the circulating red cell mass. The model incorporates the best current understanding of the dynamics of red cell production and destruction and the associated feedback regulation. Specifically studied were the hemodynamic responses of a 28-day bedrest study devised to simulate Skylab experience. The results support the hypothesis that red cell loss during supine bedrest is a normal physiological feedback process in response to hemoconcentration enhanced tissue oxygenation and suppression of red cell production. Model simulation suggested the possibilities that this period was marked by some combination of increased oxygen-hemoglobin affinity, small reduction in mean red cell life span, ineffective erythropoiesis, or abnormal reticulocytosis. A80-20021 * **A study of metabolic balance in crewmembers of Skylab IV.** P. C. Rambaut, C. S. Leach, and G. D. Whedon (NASA, Johnson Space Center, Medical Sciences Div., Houston, Tex.). *Acta Astronautica,* vol. 6, Oct. 1979, p. 1313-1322. 21 refs.

A metabolic balance study was conducted on the three crewmembers of the 84-day Skylab IV earth orbital mission. Dietary intake was controlled, monitored, and kept very nearly constant for a period commencing 21 days prior to flight, throughout flight, and for a period of 18 days postflight. Within the first 30 days of flight urine calcium rose to a level approx. 100% above preflight levels and remained elevated for the remainder of the flight. Fecal calcium excretion increased more slowly but continued to accelerate throughout the flight and did not return to baseline levels during the postflight period. Urinary nitrogen increased to 25-30% above preflight levels within one month following launch and thereafter gradually subsided toward control values. The overall losses of calcium averaged approx. 200 mg per day throughout the mission while nitrogen losses averaged 590 mg. Various other indices of musculoskeletal deterioration are discussed and correlated. The parallelism between the effects of weightlessness and bed rest is reviewed. It is noted, that no evidence is yet available as to the identity of the initial biological response to the absence of gravity. (Author)

A80-20022 * **Amino aciduria in weightlessness.** C. S. Leach, P. C. Rambaut (NASA, Johnson Space Center, Houston, Tex.), and N. di Ferrante (Baylor University, Houston, Tex.). *Acta Astronautica,* vol. 6, Oct. 1979, p. 1323-1333. 30 refs.

Urinary excretion of amino acids by the 9 Skylab crewmen was studied as an indicator of the metabolic effects caused by exposure to the space flight environment. Intake was consistent in quality and quantity throughout the 28, 59 and 84-day flights for each of the crewmen and complete collections were accomplished. The results indicated an increased excretion in most amino acids during the first month of flight which remained elevated in the second and third months but to a lesser extent. Additional indications of change in muscle and skeletal metabolism were observed. These results point to the desirability of obtaining additional indices of alterations in protein synthetic processes in conjunction with future space flights. (Author)

A80-20023 * **Fluid volumes changes induced by spaceflight.** P. C. Johnson (Baylor University, Houston, Tex.). *Acta Astronautica,* vol. 6, Oct. 1979, p. 1335-1341. 10 refs. Contracts No. NAS9-14578; No. NAS9-14662; No. NAS9-11201.

The blood volume (BV), plasma volume (PV), and extracellular fluid volume changes produced in crewmembers during spaceflights of 11-84 days were compared to changes after 14 or 28 days of bedrest. Spaceflight and bedrest produce approximately equal BV changes but the recorded PV change after spaceflight was less. However, the diurnal change in PV may explain the smaller decreases recorded after spaceflight. The cardiovascular deconditioning caused by spaceflight and bedrest was compared using the mean heart rate response to lower body negative pressure (LBNP) testing at -50 mmHg pressure. These tests show approximately equal LBNP produced heart rate changes after bedrest and spaceflight. A countermeasure which includes 4 hr of LBNP treatment at -30 mmHg and the ingestion of one l. of saline was studied and found capable of returning the heart rate response and the PV of bedrested subjects to control (prebedrest) levels suggesting that it would be useful to the crewmembers after a spaceflight. A80-20082 # **The effect of antiorthostatic stimuli on human operators studied using rheography data (Vliianie antiortostaticheskogo vozdeistviia na cheloveka-operatora /po dannym reografii/).** Sh. T. Avetikian and A. M. Zingerman (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 5, Nov.-Dec. 1979, p. 1052-1059. 17 refs. In Russian.

The blood flow characteristics of the heat and shin as well as of the arterial pressure and pulse rate of human operators were studied in order to evaluate the effect of antiorthostatic stimuli. It is shown that an antiorthostatic stimulus of -45 deg for 20 min, causing increased blood flow to the upper part of the body, increases the tonus of the brain arteries and decreases the tonus of leg arteries; these changes facilitate the redistribution of blood toward the extremeities. When there is a sufficient venous flow from the brain, compensatory responses of the cardiovascular system to the antiorthostatic stimuli are not pronounced; a reduced venous outflow is accompanied by an increase in brain-artery tonus and in arterial pressure. Operator performance is found to suffer most during a pronounced reduction of venous flow from the brain. B.J.

A80-20213 # **Polycardiographic research with a single-channel electrocardiograph (Polikardiograficheskoe issledovanie odnokanal'nym elektrokardiografom).** A. M. Romanko (Tbilisskii Gosudarstvennyi Meditsinskii Institut, Tiflis, Georgian SSR). *Akademiia Nauk Gruzinskoi SSR, Soobshcheniia,* vol. 95, Sept. 1979, p. 733-736. 15 refs. In Russian.

A single-channel electrocardiographic technique is described. Recorded data yield a single complex monographic curve, on which three basic parameters of heart activity are distinguished; these parameters are suitable for the phase analysis and qualitative evaluation of cardiac action. A block diagram of the setup is presented. B.J.

A80-20387 **Energy uptake in the first step of visual excitation.** A. Cooper (Glasgow, University, Glasgow, Scotland). *Nature,* vol. 282, Nov. 29, 1979, p. 531-533. 19 refs. Research supported by the Science Research Council.

The direct measurement of photon energy uptake during the formation of bathorhodopsin from bovine rhodopsin in the photochemical process of visual excitation is reported and the possible significance of the results is discussed. Photocalorimeter determinations of the energy uptake by rhodopsin illuminated at 450 or 485 nm and 77 K accompanied by the photoreversible formation of bathorhodopsin indicate that the ground state energy of bathorhodopsin is about 35 kcal (145 J, 1.50 eV) higher than that of rhodopsin. On the basis of this unexpectedly high ground-state energy for bathorhodopsin, ground- and excited-state potential energy surfaces for the photoreaction are constructed which reveal the possibility of the overlap of the potential surfaces. A possible mechanism for the response of rhodopsin to photon absorption is then proposed and it is noted that, because of energy surface overlap, at very low temperatures an energy barrier and a temperature dependence in the rate of bathorhodopsin formation from the excited state of rhodopsin may be found. A.L.W.

A80-20441 **Combined effects of broadband noise and complex waveform vibration on cognitive performance.** C. S. Harris and R. W. Shoenberger (USAF, Aerospace Medical Research Laboratory, Wright-Patterson AFB, Ohio). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 1-5. 18 refs. Contract No. F33615-76-C-0401.

The performance of 12 subjects was measured on a complex counting task during exposure to each of four experimental conditions for a duration of 30 min. Two levels of noise, 65 dBA and 100 dBA, were presented both with and without 0.36 rms Gz sum-of-sines vibration. Combined 100 dBA noise and vibration produced less adverse effects than the vibration combined with 65 dBA noise. This result agrees with previous studies using tracking tasks. However, two effects were demonstrated that had not been obtained previously. First, a clearcut adverse effect of vibration on the counting task was obtained. Second, an adverse effect of 100 dBA noise on the counting tasks was demonstrated. Previously, a 110 dBA noise was required to adversely affect tracking performance. (Author)

A80-20442 **Serum cholesterol levels in selected Air Force cadets compared with levels in the West Point study.** D. A. Clark, E. L. Moser, E. L. [illegible], E. L. [illegible], and F. H. [illegible], Jr. (USAF, School of Aerospace Medicine, Brooks AFB; U.S. Army Health Sciences Academy, Fort Sam Houston, Tex.). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 6-10. 16 refs.

A80-20443 **Eustachian tube function in selection of airmen.** P. Groth, A. Ivarsson, A. Nettmark, and O. Tjernstrom (Malmo General Hospital, Malmo, Sweden). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 11-17. 21 refs. Research supported by the Forsvarets Forskningsanstalt.

A comprehensive study of Eustachian tube function in 84 aspirants accepted for flight training was made. Using a pressure chamber, both static and dynamic pressure changes, as in ascent and descent, were applied to test the tubal pressure equilibrating capacity in the sitting position. While all 84 were otologically healthy, a wide range in the pressure equilibrating capacity was found - 20% could not equilibrate static over- and underpressures of 10 cm H2O completely, 8% could not equilibrate at all during simulated descent, 3 subjects reported acute vertigo during simulated ascent in combination with high unilateral middle ear pressure. Asymmetry between ears of single subjects in pressure equilibrating capacity was also found to a large extent. It was not possible to identify subjects with poor equilibrating capacity by simple tests like Valsalva's or Toynbee's manoeuvres. The results may indicate that today's criteria for Eustachian tube function in the selection of airmen can be made more efficient. (Author)

A80-20444 * **A sudden-stop vestibulovisual test for rapid assessment of motion sickness manifestations.** A. Graybiel (U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, Fla.) and J. R. Lackner (Brandeis University, Waltham; MIT, Cambridge, Mass.). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 21-23. 5 refs. Contract No. NAS9-15147. NASA Order T-9140-E.

A sudden-stop vestibulovisual (SSV) test employing a rotating chair centered in a striped cylindrical enclosure is discussed. A subject, with his eyes covered, is accelerated clockwise at 15 degrees per second squared and maintained at this velocity for 30 sec. The chair is then brought to rest within 1.5 sec and remains at rest for 30 sec while physiological parameters and motion sickness symptoms are recorded. The procedure is repeated until a predetermined motion sickness endpoint (slight nausea) is reached or 20 stops have been made. The scores made by 14 subjects in 4 sessions in terms of susceptibility to motion sickness are presented, and the pattern of all scores indicates rates of acquisition and decay of adaptation effects. It is concluded that at sea or in flight training good retention of adaptation is more important than is a rapid rate of acquiring adaptation, but in Spacelab, where early missions will be brief, rapid acquisition is all-important. A80-20445 **Effect of 1 alpha-hydroxy-cholecalciferol and varying phosphorous content in the diet on calcium phosphorous metabolism in hypokinetic rats.** A. S. Ushakov, V. B. Spirichev, M. S. Belakovskii, N. V. Blazheevich, and A. L. Pozdniakov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 24-28. 12 refs.

A80-20446 **Effect of hypogravity on human lymphocyte activation.** A. Cogoli, M. Valluchi-Morf, M. Mueller (Zurich, Eidgenossische Technische Hochschule, Zurich, Switzerland), and W. Briegleb (Deutsche Forschungs- und Versuchsanstalt fur Luft- und Raumfahrt, Institut fur Flugmedizin, Bonn, West Germany). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 29-34. 22 refs. Swiss National Science Foundation Grant No. 3,109,077.

Cultures of human lymphocytes were exposed to the mitogen concanavalin A in a low-g environment generated by a fast rotating clinostat. DNA-synthesis was determined by the incorporation of (H-3)-thymidine as the parameter for activation, cell ultrastructure was analyzed by electron microscopy, and cell movements were recorded by a cinecamera. The results were compared with 1-g controls. The cells cultured at low g show: (1) a depression of activation by 50%, (2) the appearance of 'mitochondria-rich' cells, and (3) the enhanced formation of pseudopods and uropods. Investigations in vitro at low and high g and [illegible] on the effect of spaceflights on lymphocytes from cosmonauts and astronauts suggest that hypogravity depresses, whereas hypergravity enhances, lymphocyte activation by mitogens. (Author)

A80-20447 * Hypergravity and estrogen effects on avian anterior pituitary growth hormone and prolactin levels. R. P. Fiorindo and J. A. Negulesco (Ohio State University, Columbus, Ohio). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 35-40. 26 refs. Research supported by the Ohio State University; Contract No. NAS2-6634.

Developing female chicks with fractured right radii were maintained for 14 d at either earth gravity (1 g) or a hypergravity state (2 g). The birds at 1 g were divided into groups which received daily injections of (1) saline, (2) 200 micrograms estrone, and (3) 400 micrograms estrone for 14 d. The 2-g birds were divided into three similarly treated groups. All 2-g birds showed significantly lower body weights than did 1-g birds. Anterior pituitary (AP) glands were excised and analyzed for growth hormone and prolactin content by analytical electrophoresis. The 1-g chicks receiving either dose of daily estrogen showed increased AP growth hormone levels, whereas hypergravity alone did not affect growth hormone content. Chicks exposed to daily estrogen and hypergravity displayed reduced growth hormone levels. AP prolactin levels were slightly increased by the lower daily estrogen dose in 1-g birds, but markedly reduced in birds exposed only to hypergravity. Doubly-treated chicks displayed normal prolactin levels. Reduced growth in 2-g birds might be due, in part, to reduced AP levels of prolactin and/or growth hormone. (Author)

A80-20448 Development of 'sports anemia' in physically fit men after daily sustained submaximal exercise. M. W. Radomski, B. H. Sabiston (Defence and Civil Institute of Environmental Medicine, Downsview, Ontario Canada), and P. Isoard (Service de Santé des Armées, Centre de Recherches, Lyons, France). *(Aerospace Medical Association, Annual Meeting, 50th, Washington, D.C., May 14-17, 1979.) Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 41-45. 25 refs.

Hematological changes were studied in physically fit young soldiers who marched 35 km/d for 6 d, working at 35 percent of their maximal oxygen consumption. Four days of marching produced decreases in numbers of erythrocytes (RBC) and in hematocrit (Hct). This 'sports anemia' persisted beyond day 6 into the post-march period and was accompanied by decreases in hemoglobin (Hb), mean corpuscular hemoglobin (MCH), mean corpuscular hemoglobin concentration (MCHC), and mean corpuscular volume (MCV). The latter decrease was attributed to a preferential destruction of large RBC. The post-march period was characterized by an early (2 d) recovery of RBC numbers, Hct, and MCV, and a persistent (greater than 4 d) decrease in Hb, MCH, and MCHC. This pattern, characteristic of hypochromic macrocytosis, possibly reflects a premature release of young RBC from the bone marrow. Clearly, 'sports anemia,' previously reported to occur with intensive physical exercise, can also result from sustained and repetitive submaximal exercise. (Author)

A80-20449 Psychophysiological monitoring of operator's emotional stress in aviation and astronautics. P. V. Simonov, M. V. Frolov, and E. A. Ivanov (Academy of Sciences, Institute of Higher Nervous Activity and Neurophysiology, Moscow, USSR). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 46-49. 6 refs.

Skill performance of an aerospace operator is greatly influenced by the level of emotional stress. The paper reviews methods of objective monitoring of emotional stress based on analysis of changes in the characteristics of physiological functions. Indirect methods like analysis of physiological and electrophysiological signals from the body surface, including the pneumogram, ECG, EEG, GSR and various speech parameters are preferred. To eliminate the shortcomings of physiological monitoring and performance testing, a combined method is recommended permitting one to diminish the size of the required electrophysiological signal and to shorten the frequency of testing. Special attention is given to estimation of the changes in heart rate and T-peak amplitude and spectral and intonational characteristics of the human voice. The experiment conducted on a mock-up of an aircraft at the Vnukovo airport is described. L.M.

A80-20450 Bone remodeling in centrifuged rats - Histomorphometric study after an 18-day run. C. Nogues and M. Peuchmaur (Laboratoire Central de Biologie Aéronautique, Paris, France). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 50-55. 17 refs.

A histomorphometric and histodynamic study of bone tissue was conducted in rats exposed to 2 G centrifugation for a period of 18 d. Shortening of the femurs was observed, associated with alterations of the growth cartilage in centrifuged animals. The morphometric analysis demonstrates a reduction in bone volume without increase in the activity of osteoblasts. The fluorescent fixation during the dynamic study shows a reduced appositional rate. This result seems to reflect the numerous factors which contribute to the experimental centrifugation test: the osteoporosis is cortisone induced; it is a response to the aggression and probably conceals the remodeling due to higher stress loads. A80-20452 Motion sickness. I - A theory. II - A clinical study based on surgery of cerebral hemisphere lesions. III - A clinical study based on surgery of posterior fossa tumors. R. C. Schneider and E. C. Crosby (University Hospital, Ann Arbor, Mich.). *Aviation, Space, and Environmental Medicine,* vol. 51, Jan. 1980, p. 61-85. 99 refs.

A theory is suggested on 'motion sickness' reported by 15 percent of American astronauts and 17 percent of Russian cosmonauts and described as 'dizziness, nausea, vomiting, flashes of light, formed hallucinations or illusions of inversion of image in space or disorientation in space'. Two types of motion sickness are defined. Both have manifestations of nausea, vomiting, headache and dizziness, but there are symptoms of the motion sickness as related to peripheral organs, the inner ear and the eye, as contrasted to 'motion sickness in space' which has additional symptoms of hallucinations and illusions and is related to the temporoparieto-occipital cortex of the brain. Vascular insufficiency to this area by spasm of the vessel may be responsible for this symptomatology. The theory is supported by clinical studies based on brain surgery. The study suggests that it might be profitable to test a space applicant not only in a centrifugal or horizontal plane but also in vertical or other planes with the sudden application of restraint at different rates of speed using CT scanning. V.L.

A80-20500 # Perspectives of the utilization of hyperbaric oxygenation in aviation medicine (Perspektivy ispol'zovaniia giperbaricheskoi oksigenatsii v praktike aviatsionnoi meditsiny). I. N. A80-20855 ***Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, University of Pittsburgh, Pittsburgh, Pa., April 25-27, 1979. Part 1 - Biomedical.*** *Conference sponsored by the University of Pittsburgh. Edited by W. G. Vogt and M. H. Mickle. Pittsburgh, Pa., Instrument Society of America, 1979. 308 p. Price of five parts, $125.*

The papers deal with the mathematical modeling of biomedical mechanisms and phenomena. Among the topics covered are: the mathematical modeling of intracranial pressure dynamics; computer models for freezing and thawing in biological systems; modeling for therapeutic design; pattern recognition and information processing in biological problems; modeling and estimation in biological systems; spatial vision; information modeling of biological structures; and modeling and estimation in biomedical systems. V.P.

A80-20856 **The informational structure of DNA, RNA, and amino acid sequences.** D. W. Kopp, G. W. Moser, and J. A. Skraly (Pittsburgh, University, Pittsburgh, Pa.). In: Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, Pittsburgh, Pa., April 25-27, 1979. Part 1. Pittsburgh, Pa., Instrument Society of America, 1979, p. 139-150. 25 refs.

In the study described, the differences between the informational structure variables for DNA, RNA, and polypeptides were noted, and information variables which significantly discriminated between sources were identified. Using only structure information variables in a discriminant analysis technique, 48 of the 53 mRNA sequences investigated could be properly identified as to DNA, RNA, or protein source. A new powerful approach to the investigation of the informational structure of nucleic acids and polypeptides is proposed.
V.P.

A80-20857 **Information processes in the evolution of protein synthesis.** G. W. Moser, D. W. Kopp, and J. A. Skraly (Pittsburgh, University, Pittsburgh, Pa.). In: Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, Pittsburgh, Pa., April 25-27, 1979. Part 1. Pittsburgh, Pa., Instrument Society of America, 1979, p. 151-159. 16 refs.

The role of DNA base probabilities and their relationship with information structure was investigated. An interesting result is that thymine and guanine base probabilities have a principal influence on DNA sequence information. DNA information content is not related to the length of the sequence, but the informational content of RNA and amino acid sequences is. The variety of triplets in RNA sequences and the variety of kind of amino acids in a polypeptide chain were related to the sequence information or order of bases in DNA molecules. A discussion of these results in the light of current evolutionary theory provides a basis for the understanding of the control of protein synthesis.
V.P.

A80-20858 **Spatial filtering and mechanisms of perception.** A. P. Ginsburg (USAF, Aviation Vision Laboratory, Wright-Patterson AFB, Ohio). In: Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, Pittsburgh, Pa., April 25-27, 1979. Part 1. Pittsburgh, Pa., Instrument Society of America, 1979, p. 185-192. 11 refs.

Attempts have been made to distinguish between visual mechanisms as being space domain feature detectors or transform domain spatial frequency detectors. It is shown that these descriptions may be considered equivalent in terms of producing similar filtered images. Fourier-like transformation, however, appears to be a more accurate description of the filtering process in the case of biological data.
V.P.

A80-20859 **Nonlinear interactions in binocular vision.** H. R. Wilson (Chicago, University, Chicago, Ill.). In: Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, Pittsburgh, Pa., April 25-27, 1979. Part 1. Pittsburgh, Pa., Instrument Society of America, 1979, p. 209-213. 13 refs.

The existence of hysteresis effects in binocular vision is well documented. In addition, it has been shown that binocular hysteresis may occur even when eye movements are not a factor, thus pointing to the existence of neural hysteresis (presumably at the cortical level). The theory of differential equations provides a convenient framework for modeling this neural hysteresis. One approach to the study of nonlinear dynamic phenomena is through the application of Volterra or Wiener kernel expansions; it has been successfully applied to a number of physiological and psychophysical phenomena. However, there is an important class of nonlinear phenomena which cannot be understood within this framework-cooperative phenomena involving hysteresis. In the present paper, a simple cooperative effect in human binocular vision is described, and a physiologically plausible mathematical model for analyzing it is proposed. V.P.

A80-20860 **Interpreting nonlinear systems - The third order kernel of the eye movement control system.** S. Klein (California Institute of Technology, Pasadena; Claremont College, Claremont, Calif.). In: Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, Pittsburgh, Pa., April 25-27, 1979. Part 1. Pittsburgh, Pa., Instrument Society of America, 1979, p. 215-222. 15 refs.

White noise stimuli are useful for analyzing nonlinear systems. A technique has been developed which improves the temporal resolution of the measured response. The role of the third order Wiener kernel is examined in an application to the eye movement control system. Unusual aspects of that system are explored. (Author)

A80-20861 **Theoretical problems in modeling color grating detection.** R. F. Quick, Jr. (Carnegie-Mellon University, Pittsburgh, Pa.). In: Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, Pittsburgh, Pa., April 25-27, 1979. Part 1. Pittsburgh, Pa., Instrument Society of America, 1979, p. 249-252. 10 refs.

The spatial properties of single and double opponent neurons in vision are discussed in relation to their possible effects on chromatic contrast detection by human observers. From measured line-spread data it is argued that double-opponent mechanisms are responsible for some contrast detection results. Sinewave sensitivity curves, on the other hand, give evidence that other mechanisms, possibly single-opponent, are also active at low spatial frequencies. (Author)

A80-20899 **Real-time simulation of FLIR and LLLTV Systems for aircrew training.** W. L. Foley (USAF, Advanced Systems Div., Wright-Patterson AFB, Ohio). In: Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, Pittsburgh, Pa., April 25-27, 1979. Part 5. Pittsburgh, Pa., Instrument Society of America, 1979, p. 1737-1746.

The paper deals with simulation of Forward Looking Infrared (FLIR) and Low Light Level TV (LLLTV) Systems for application to training aircrews in performing full-scale mission simulation. Attention is given to simulating of the thermal or visual signatures typical for a total scenario consisting of the sensor, atmosphere, and ground environment that consider time of day, season of year, etc. V.T.

A80-21017 **Occupational exposure to radio-frequency electromagnetic fields.** K. H. Mild (Umea Hospital, Umea, Sweden). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 12-17. 23 refs.

The paper considers occupational exposure to radio-frequency (RF) electromagnetic (EM) fields in industrial processes in near-field situations where electric and magnetic field strengths are monitored to assess the health hazard. Plastic materials are joined by an RF machine whose electrodes are not shielded and which may produce high level RF fields in the immediate vicinity, exceeding the ANSI standard. A physiotherapist may be exposed to high E and H fields using RF shortwave therapy; the maintenance personnel in FM/TV broadcast towers are subject to intense RF fields, and induction heating equipment used for forging, annealing and brazing can expose operators' hands to magnetic fields. A.T.

A80-21018 **Electromagnetic radiation from selected telecommunications systems.** R. C. Petersen (Bell Telephone Laboratories, Inc., Murray Hill, N.J.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 21-24.

The paper describes the instrumentation and measurement techniques used in a study of electromagnetic (EM) energy in radio transmission systems, and summarizes results obtained for high frequency (HF) radio, tropospheric scatter, earth-satellite, and microwave radio relay systems. Power density and electric field measurements were made at selected facilities, including antenna tower locations for point-to-point microwave radio equipment. It was found that the maximum electric field strengths associated with HF radio systems in areas accessible to radio personnel was less than [illegible] V/m. The maximum power densities associated with tropospheric scatter systems, satellite communication earth stations and point-to-point microwave radio systems were less than [illegible] microwatt/sq cm; in some cases microwave radio rooms in high building floors showed maximum levels due to VHF and UHF transmitters of a few tens of microwatt/sq cm. A.T.

A80-21019 **State of the knowledge for electromagnetic absorbed dose in man and animals.** O. P. Gandhi (Utah, University, Salt Lake City, Utah). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 24-32. 32 refs.

The paper gives the EM absorbed dose for man and animals at various frequencies for the plane wave irradiation condition for different orientations of the body relative to incident fields. Also included are the results for the whole-body absorption for conditions of electrical contact with ground and in the presence of reflecting surfaces of high conductivity and multiple animals. The data are given for the distribution of power deposition in man models for the resonance conditions of highest whole-body electromagnetic absorption. The highlights of the results obtained with proportionately scaled saline- and biological-phantom-filled models of man have been confirmed by experiments with small laboratory animals, from 25-g mice to 2250-g rabbits. (Author)

A80-21020 **Electromagnetic dosimetry for models of humans and animals - A review of theoretical and numerical techniques.** C. H. Durney (Utah, University, Salt Lake City, Utah). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 33-40. 46 refs.

The paper reviews techniques of electromagnetic dosimetry for human and animal models. Numerical techniques, analytical cylindrical models, and geometrical optics methods are described, noting the useful frequency range of each method; analytical techniques included analysis of planar and spherical models, long-wavelength analysis of spheroids and ellipsoids and solutions of the wave equation in spheroidal coordinates. Numerical techniques involved the moment method and the extended boundary condition method to calculate the specific absorption rate in biological models. It is concluded that advancements were made through a combination of techniques that include analytical methods in which Maxwell's equations are solved, and numerical techniques in which large systems of simultaneous equations are solved by matrix inversion or iteration. A.T.

A80-21021 **Microwave biological effects - An overview.** S. M. Michaelson (Rochester, University, Rochester, N.Y.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 40-49. 99 refs. Contract No. EY-76-C-02-3490.

The paper presents a review of microwave (MW) biological effects. Principles of biologic experiments are outlined stressing that their reliability depends on proper selection of animal models and extrapolation of data from animals to man, and on correct scaling of results from various species; the cellular-chromosome-genetic effects, the gonads, and neuroendocrine effects are considered, noting that the latter have been interpretated as the result of direct MW interactions with the central nervous system. The behavioral effects, cardiovascular reactions, and hematopoietic results have been covered, along with effects on immunity, and auditory and ocular responses. It is concluded that although there is considerable agreement on the biological effects and potential hazards of MW, there are questions as to the definition of hazard and whether all effects are harmful. A.T.

A80-21022 **Microwave cataractogenesis.** S. F. Cleary (Virginia Commonwealth University, Richmond, Va.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 49-55. 52 refs.

A review of the biological effects of electromagnetic radiation and investigations of microwave cataractogenesis is presented. Studies suggest involvement of thermal damage. Time-intensity cataract thresholds for acute exposures of rabbits indicate dose reciprocity, and the induction of lens opacification following repeated exposure at intensities below the threshold for single-dose exposure suggests a cumulative component of lens damage and the existence of repair mechanisms. Cataract induction has been reported in humans exposed to microwave radiation, while acute lens opacification appears to involve thermally induced lens damage at intensities of 100 microwatt/sq cm. A.T.

A80-21023 **Microwave irradiation and the blood-brain barrier.** D. R. Justesen (U.S. Veterans Administration Medical Center; Kansas, University, Kansas City, Kan.). *IEEE, Proceedings* vol. 68, Jan. 1980, p. 60-67. 55 refs. Research supported by the U.S. Veterans Administration; U.S. Food and Drug Administration Grant No. FD-00650.

The paper examines microwave irradiation and the blood-brain barrier. The mammalian blood-brain barrier (BBB) is believed to participate in regulating the brain fluid environment, and reports of the altered BBB function in small animals after exposure to weak microwave fields show that the tight junctions of the BBB capillaries are loosened by microwaves only at high field strengths that elevate brain temperature. Anatomical data reveal that the tight junctions remain intact, but that enhanced blood-to-brain vesicular transport of normally excluded tracer molecules occurs reversibly in small animals exposed to moderate field strength waves. It is concluded that brief exposure to microwave fields impairs the cardiovascular function, but the effect of long-term exposure is not known. A.T.

A80-21024 **The microwave auditory phenomenon.** J. C. Lin (Wayne State University, Detroit, Mich.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 67-73. 41 refs. Navy-NSF-supported research.

The paper examines electrophysiological activity produced by exposing the brains of laboratory animals to rectangular pulses of microwave energy. These results suggest that a microwave auditory phenomenon is evoked by a mechanism similar to conventional sound reception, and that the primary interaction site is peripheral to the cochlea. It is shown that the peak pressure due to thermal expansion is greater than the radiation pressure or electrostriction, and that the induced sound frequency is only a function of the size and acoustic property of the brain. Several suggestions were made for future research in microwave auditory effect and its health implications. A.T.

A80-21025 **Advances in microwave-induced neuroendocrine effects - The concept of stress.** S.-T. Lu, S. M. Michaelson (Rochester, University, Rochester, N.Y.), and W. G. Lotz (U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, Fla.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 73-77. 46 refs. Navy-supported research.

The paper examines progress in studies of microwave-induced neuroendocrine effects with respect to the current concepts of neuroendocrine control mechanisms. Recent evidence indicates that neuroendocrine effects are induced by microwave exposure with a threshold intensity required for the onset of the response, with the level of the threshold varying on the specific endocrine parameter. The response of the endocrine systems appears to be a nonspecific stress reaction in the case of adreno-cortical and growth hormone changes, but it is a metabolically specific response to increased energy input in the case of pituitary-thyroid changes. A.T.

A80-21026 # **Epidemiologic studies of microwave effects.** C. Silverman (U.S. Public Health Services; U.S. Food and Drug Administration, Rockville, Md.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 78-84. 31 refs.

This is a selective review of human epidemiologic studies and related information concerning biologic and health effects of microwave radiation. Following a description of the objectives and methods of epidemiology, the approach to microwave effects is considered and two recent but not yet published studies are described, namely, a study of U.S. naval personnel occupationally exposed to radar, and a study of American Embassy personnel in Moscow. Investigations of several reported or suspected adverse effects are assessed: ocular effects, nervous and behavioral effects, congenital anomalies, and cancer. Suggestions are offered for further epidemiologic research. (Author)

A80-21027 # **Soviet and Eastern European research on biological effects of microwave radiation.** D. I. McRee (National Institutes of Health, National Institute of Environmental Health Sciences, Research Triangle Park, N.C.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 84-91. 33 refs.

A review of Soviet and Eastern European research on biological effects of microwave radiation is presented. The literature reports changes in almost all biological systems at exposure power densities less than 10 mW/sq cm, and since 1976 more data has been published on long-term microwave exposures at power density levels below 10 mW/sq cm. Effects on humans, metabolic effects, central nervous system investigations, and neuroendocrine effects are discussed, along with cardiovascular, blood, immunology, reproductive, and cell and virus manifestations. It is concluded that the overview of the Soviet and Eastern European literature indicates a large number of bioeffects at exposures below 10 mW/sq cm, with a significant number of biological changes reported below 1 mW/sq cm. A.T.

A80-21028 **Study of effects of long-term low-level rf exposure on rats - A plan.** A. W. Guy, C.-K. Chou, R. B. Johnson, and L. L. Kunz (Washington, University, Seattle, Wash.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 92-97. 18 refs. U.S. Rehabilitation Services Administration Grant No. 16-P-56818; Contract No. F33615-78-C-0631.

The study is designed to simulate the chronic exposure of man to 450-MHz radio-frequency (rf) radiation at an incident power density of 1 mW/sq cm. This paper presents a plan for conducting a lifetime exposure study involving two phases of work. The first phase, up to March 1980, is being spent in preparation for the chronic study. During the second phase, 200 rats, 100 experimental and 100 control, will be exposed 22 h/day over their lifetime to pulse-modulated 2450-MHz rf fields at an incident power density less than 500 microwatts/sq cm. The state of health of each animal will be assessed periodically throughout the exposure period until the death of the animal. Blood chemistry parameters, mortality rates, histopathology, body weight, and water and food consumption will be the biological endpoints of this study. The pulse-modulated fields consist of 16 pulse groups/sec (25 pulses/group) with a pulse duration of 10 microsec and a period of 500 microsec. (Author)

A80-21029 # **Biological effects of electric and magnetic fields associated with ELF communications systems.** J. D. Grissett (U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, Fla.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 98-104. 29 refs.

The paper presents an evaluation of the biological effects of electric and magnetic fields associated with the extremely low frequency (ELF) submarine communication system. The design of the ELF system is described noting that the magnetic fields at the earth's surface above the system antenna would average 0.02 mT and the electric field gradient would be 0.07 V/m. It was found that ELF fields are not likely to present a genetic hazard, and should have no effect on fertility and cell growth. Studies of serum triglyceride levels in humans showed no effects from ELF fields, but no conclusive data could be found regarding their effect on circadian rhythms and electrosensitive fish. It was concluded that while the possibility of a physiological perturbation from ELF fields exists, there was no experimental or theoretical basis to assume a hazard at exposure levels of 0.02 mT and 0.07 V/m. A.T.

A80-21030 **RF-field interactions with biological systems - Electrical properties and biophysical mechanisms.** H. P. Schwan and K. R. Foster (Pennsylvania, University, Philadelphia, Pa.). *IEEE, Proceedings*, vol. 68, Jan. 1980, p. 104-113. 71 refs. Contract No. N00014-79-C-0392.

Electrical properties of tissues, macromolecular solutions, and cell membranes are summarized at frequencies from the extra low frequency (ELF) to microwave range. Previously presented dielectric data are supplemented by new results and a more detailed discussion of the physical mechanisms for the observed temperature coefficients of the dielectric properties. The dielectric data are discussed in terms of the interaction mechanisms which give rise to observed relaxational effects. Possible mechanisms for nonthermal weak interactions between radio-frequency (RF) energy and tissues are discussed and evaluated. (Author)

A80-21031 **Cellular effects: Millimeter waves and Raman spectra - Report of a panel discussion.** D. L. Jaggard and J. L. Lords (Utah, University, Salt Lake City, Utah). *IEEE, Proceedings,* vol. 68, Jan. 1980, p. 114-119. 12 refs.

On June 22, 1979, a panel discussion was held at the Bio-electromagnetics Symposium in Seattle, Wa. In this report, the statements of the panel members are summarized and several common suggestions are commented on. Written abstracts which correspond to the oral presentations of most of the panel members are also included. (Author)

A80-21032 # **Frequency and power windowing in tissue interactions with weak electromagnetic fields.** W. R. Adey (U.S. Veterans Administration Hospital; Loma Linda University, Loma Linda, Calif.). *IEEE, Proceedings,* vol. 68, Jan. 1980, p. 119-125. 47 refs. Research supported by the U.S. Department of Energy; Grant No. PHS-1-R01-678-01; Contracts No. N00014-76-C-0421; No. DE-A101-79ET29078.

The paper examines the frequency and power windowing in tissue interactions with weak electromagnetic fields. Nonionizing electromagnetic (EM) fields raising temperature orders of magnitude less than 0.1 C may result in major physiological changes not attributable to raised temperature per se, and have produced chemical, physiological, and behavioral changes only within windows in frequency and incident energy. Two different intensity windows have been observed, one for ELF tissue gradients about 10 to the -7th power V/cm, and one for amplitude modulated RF and microwave gradients about 0.1 V/cm. Coupling to living cells requires amplifying mechanisms based on nonequilibrium processes; these cooperative processes are important in immune and hormonal responses, and in nerve cell excitation. Polyanionic proteinaceous material on cell membrane surfaces appear to be the site of detection of these weak molecular and neuroelectric stimuli. A.T.

A80-21033 **Steady magnetic fields in noninvasive electromagnetic flowmetry.** S. X. Salles-Cunha (Wisconsin, Medical College, Milwaukee, Wis.), J. H. Battocletti, and A. Sances, Jr. (Wisconsin, Medical College, Milwaukee; U.S. Veterans Administration Medical Center, Wood, Wis.). *IEEE, Proceedings,* vol. 68, Jan. 1980, p. 149-155. 26 refs. Research supported by the U.S. Veterans Administration Medical Center; Grant No. NIH-NO1-HI-2216.

Transcutaneous electromagnetic flowmetry measures, noninvasively, the induced voltage generated by the flow of blood through a region immersed in a magnetic field. Steady magnetic fields of less than 0.5 T have been used to measure pulsatile popliteal, brachial, and bilateral common carotid blood flow in normal subjects, in patients with arteriovascular disease, and in subjects with arteriovenous fistula surgically created for hemodialysis. In these studies, field magnitude and time of exposure were below the limits suggested by the two exposure guidelines available. Flow rate was calculated from the measured voltages and geometrical and electrical parameters using equations developed for three-media (body segment-vessel-blood) cylindrical models, based on electromagnetic theory. The 68 measurements reported here are in the expected range. (Author)

A80-21038 # **The effect of certain extremal factors on the human auditory function (Vozdeistvie nekotorykh ekstremal'nykh faktorov na slukhovuiu funktsiiu cheloveka).** V. V. Diskalenko. *Voenno-Meditsinskii Zhurnal,* Oct. 1979, p. 46-49. In Russian.

The paper summarizes data on the effects of certain extremal factors, including nervous-emotional stress, prolonged hypokinesia, and vestibular-optokinetic stimuli, on the auditory function of healthy people. These factors are typical for operators of military equipment and usually act together on the organism. The responses of the auditory system to such factors were studied from tonal audiograms, auditory discomfort levels, sensitivity to ultrasound, and data on auditory masking. Data indicate definite functional changes in the auditory system under the influence of the extremal factors. B.J.

A80-21039 # **The effect of aircraft noise on the functional state of human operators (Vliianie aviatsionnogo shuma na funktsional'noe sostoianie organizma operatorov).** V. I. Zorile, V. S. Kuznetsov, and G. I. Tarasenko. *Voenno-Meditsinskii Zhurnal,* Oct. 1979, p. 49-51. In Russian.

Noise intensity tests at 100, 110, and 120 dB were conducted on eight volunteers aged 25 to 40. The functions studied were auditory sensitivity threshold, heart rate, respiratory minute volume, operator task performance involving two-dimensional compensatory tracking, and a reserve ability to accept and process additional information that demands active redirection of attention. Results indicate that intense aircraft noise tends to produce changes in functional state and to reduce the psychophysiological reserve capabilities of the operator. B.J.

A80-21040 # **The effect of age and vitamin provision of pilots on their night vision characteristics (Vliianie vozrasta i vitaminnoi obespechennosti organizma letchika na pokazateli nochnogo zreniia).** V. V. Koblianskii. *Voenno-Meditsinskii Zhurnal,* Oct. 1979, p. 62, 63. In Russian.

KINEMATIC ANALYSIS OF OSMOTIC PROCESSES UNDER NON-EQUILIBRIUM CONDITIONS Ph.D. Thesis
Huacuz Villamar 1979 126 p
Avail: Univ. Microfilms Order No. 7926696

The general conditions for osmotic flow are derived theoretically. It is shown that when a binary mixture is separated from one of its components by means of a barrier permeable only to that same component, a necessary and sufficient condition for the balance of linear momentum in the system is the flow of mass into the mixture, across the semipermeable barrier. The equations for osmotic equilibrium under different sets of forces are derived from the general equation of motion for the osmotic system. It is concluded that the presence of a semipermeable membrane is a sufficient condition for the net motion of the binary mixture from its original equilibrium position, but it is not necessary since the membrane could be substituted by any other 'external' force acting selectively on one of the components of the mixture. It is also concluded that osmotic flow in a binary mixture is a necessary and sufficient condition to balance the linear momentum of the system. The results are applied to a series of membranes of different permeabilities and are used to explain the process of water transport in living organisms. Dissert. Abstr.

MICROBIAL COLONIZATION OF MATERIALS AT INNISFAIL, QUEENSLAND
F. John Upsher Aug. 1979 26 p refs Original contains color illustrations
(MRL-TN-428; AR-001-836) Avail: NTIS HC A03/MF A01

Materials were exposed under a glass canopy to investigate microbial colonization. Two series of exposures were made; one starting in the cool dry winter, the other in the hot-wet season. Growth of microorganisms was slow, particularly of algae which were not apparent until 30 weeks; tardiness was attributed to the samples being protected from rain so that the organisms were dependent upon atmospheric moisture and dew. An increase in the amount of growth was apparent after any week in which the mean relative humidity exceeded 87% or when 80% was exceeded for more than 125 hours. Cotton and wood provided the earliest growth and also supported the greatest amount and variety of fungi. Heavier growths were observed on acrylic paint and poly(vinyl chloride) after prolonged exposure. Cladosporium was the dominant fungal genus, being present on almost every occasion any fungus was detected. R.E.S.

The changes of the quantity of neurosecretory substance in neurohypophysis of rats under various experimental conditions are investigated. Comparing to the norm the quantity of neurosecretion after a long stay in the dark was larger. In animals subjected to immobilization stress the picture of neurohypophysis remained unchanged. It changed only in correlation with the administered water. Results indicate that the immobilization stress, in contradistinction to dolorose stress, has no substantial influence upon the quantity of neurosecretion in neurohypophysis. R.C.T.

A CONTROLLED RATE FREEZE/THAW SYSTEM FOR CRYOPRESERVATION OF BIOLOGICAL MATERIALS
V. J. Anselmo and R. G. Harrison 1 Jun. 1979 182 p Prepared for Union Carbide Co.
(Contract NAS7-100)
(NASA-CR-162531; JPL-Pub-79-91) Avail: NTIS HC A09/MF A01 CSCL 06B

A system which allows programmable temperature-time control for a 5 cc sample volume of an arbitrary biological material was constructed. Steady state and dynamic temperature control was obtained by supplying heat to the sample volume through resistive elements constructed as an integral part of the sample container. For cooling purposes, this container was totally immersed into a cold heat sink. Sample volume thermodynamic property data were obtained by measurements of heater power and heat flux through the container walls. Using a mixture of dry ice and alcohol at -79 C, sample volume was controlled from +40 C to -60 C at rates from steady state to + or - 65 C/min. Steady state temperature precision was better than 0.2 C while the dynamic capability depends on the temperature rate of change as well as the thermal mass of the sample and the container. R.C.T.

INVESTIGATION OF EFFECTS OF TEMPERATURE, SALINITY, AND ELECTRODE DESIGN ON THE PERFORMANCE OF AN ELECTROCHEMICAL COLIFORM DETECTOR
David C. Grana Nov. 1979 54 p refs
(Contract EPA-IAG-D7-0053)
(NASA-TM-80130; EPA-600/4-79-075) Avail: NTIS HC A04/MF A01 CSCL 06B

The results of two research programs to determine the optimum detector design for measuring fecal coliforms in saline waters for operational systems are presented. One program was concerned with the effects of temperature and salinity on endpoint response time, and the other, the interaction between electrode configurations and the test organisms. Test results show that the endpoint response time is related to salinity and seawater temperature; however, these results can be minimized by the correct choice of growth media. Electrode configurations were developed from stainless steel, Parlodion-coated stainless steel, and platinum that circumvented problems associated with the commercial redox electrodes. M.G.

AN ADVANCED OXYGEN SYSTEM FOR FUTURE COMBAT AIRCRAFT
J. Ernsting *In* AGARD Recent Advan. in Aeron. and Space Med. Sep. 1979 17 p refs

Avail: NTIS HC A05/MF A01

The operational and physiological requirements for an advanced oxygen system for future high performance combat aircraft are considered and reviewed. It is concluded that such an oxygen system should employ a molecular sieve on board oxygen generation system, pressure premix for dilution of the oxygen by air and a twin demand regulator package. The principles of operation of such a system are considered and a design is proposed. Author

THE EUROPEAN APPROACH TO THE SELECTION AND TRAINING OF SL PAYLOAD SPECIALISTS
K. E. Klein and J. R. Hordinsky *In* AGARD Recent Advan. in Aeron. and Space Med. Sep. 1979 12 p refs

Avail: NTIS HC A05/MF A01

The completed selection of European payload specialists (PS) for the first Spacelab mission (SL-1) is described. Future developments in European selection programs are projected. The immediate training requirements for the SL-1 PS are described. The integration of such varied training categories as biomedical and physical with the more general SL experiment training is reviewed. The usefulness of mission simulations is also discussed. PHYSIOLOGICAL FACTORS IN SPACE OPERATIONS. EMPHASIS ON SPACE SHUTTLE
Sam L. Pool, Paul C. Rambaut, and Jerry L. Homick *In* AGARD Recent Advan. in Aeron. and Space Med. Sep. 1979 12 p refs
Avail: NTIS HC A05/MF A01 CSCL 06P

Problems such as space motion sickness, redistribution of body fluids, and cardiovascular deconditioning are of concern in short-duration space shuttle flights. The expanded participation of nonastronaut crewmembers or payload specialists in these flights increases the life scientists' interest in the space shuttle flights. Problems such as loss of skeletal mass, decreased red blood cell production, and numerous endocrine changes are of more concern on long-duration flights. The Life Sciences Program is therefore concerned with a wide variety of problems that range from the applied to the basic. The common thread is biology; the context is space. Several physiological factors associated with space shuttle operations are summarized including space motion sickness, cardiovascular deconditioning, bone and muscle loss, hematology, fluid and electrolyte changes, reentry g-forces, radiation safety, noise, atmosphere, extravehicular activity, toxicology, nutrition, biowaste, and health maintenance. SUPERSONIC AERIAL TRANSPORT: MEDICAL AND PHYSIOLOGICAL ASPECTS [LE TRANSPORT AERIEN SUPERSONIQUE ASPECTS MEDICO-PHYSIOLOGIQUES]

Jean Raboutet *In* AGARD Recent Advan. in Aeron. and Space Med. Sep. 1979 7 p In FRENCH

Avail: NTIS HC A05/MF A01

From 1964 to 1974, two medical subgroups, one French and one British, researched the medical and physiological problems presented by supersonic air transportation. All the problems were addressed by committees of specialists that included physicians, physicists, chemists, and engineers. Thus, the loss of pressurization, ozone, ionizing radiation, noise, visual problems, and air conditioning were the objects of profound study. Very satisfying solutions were found. In certain cases, notably ozone and cosmic radiation, it could be proved that it was a matter of false problems, and that supersonic flight at 17,000 meters offered no danger. As the consequence of all the favorable results obtained, the Concorde could easily obtain the authorization necessary for flight.

INTRA-OCULAR PRESSURE NORMALIZATION TECHNIQUE AND EQUIPMENT Patent
Edward F. Baehr, inventor (to NASA) Issued 12 Jun. 1979 5 p Filed 31 Aug. 1977 Supersedes N77-30736 (15 - 21, p 2839)
(NASA-Case-LEW-12955-1; US-Patent-4,157,718;
US-Patent-Appl-SN-829318; US-Patent-Class-128-276) Avail: US Patent and Trademark Office CSCL 06B

A method and apparatus is described for safely reducing abnormally high intraocular pressure in an eye during a predetermined time interval. This allows maintenance of normal intraocular pressure during glaucoma surgery. A pressure regulator of the spring-biassed diaphragm type is provided with additional bias by a column of liquid. The hypodermic needle can be safely inserted into the anterior chamber of the eye. Liquid is then bled out of the column to reduce the bias on the diaphragm of the pressure regulator and, consequently, the output pressure of the regulator. This lowering pressure of the regulator also occurs in the eye by means of a small second bleed path provided between the pressure regulator and the hypodermic needle.

MODELING OF BLOOD FLOW IN VESSELS OF THE MICROCIRCULATION Ph.D. Thesis
Pattarapan Prasassarakich 1979 178 p
Avail: Univ. Microfilms Order No. 7926572

A mathematical model of blood flow in rigid straight cylindrical and tapered tubes was developed. The similarity between blood flow in small vessels with oil water flow in glass tubes was investigated. A concentric annular flow (CAF) model with a cell free plasma layer surrounding a continuous core of cells was proposed to describe blood flow in small tubes < 400 micrometers. The resulting pressure flow behavior calculated from this model agrees very well with experimental results. The plasma layer was found to be a constant; independent of shear stress, tube diameter, and feed hematocrit. Results also indicate that the CAF model qualitatively predicts the Fahraeus effect and quantitatively predicts the Fahraeus-Lindqvist effect.

THE INTERACTION OF OZONE WITH THE HUMAN ERYTHROCYTE Ph.D. Thesis
Alan Edward Koontz 1979 246 p
Avail: Univ. Microfilms Order no. 7924289

In order to examine the biochemical events of oxidant injury which lead to edema, the human red blood cell studied after exposure in vitro to high concentrations (45 nMoles or O3/10 to the 6th power cells maximum) of oxone for short periods. Changes in outdated cells, pre-incubated with adenosine to restore ATP levels, in outdated cells not pre-incubated, and in resealed ghosts produced from the outdated cells are described. The sensitivity of certain membrane sites such as glyceraldehyde-3-phosphate dehygrogenase and the ouabain binding site evidences the reactivity of oxone with a relatively small number of membrane components, which may be responsible for the generation of a permeability change, cation pump inhibition, or membrane structural modification in the absence of gross internal oxidation, leading to edematous conditions in red cells and other tissues exposed to oxidants.

The improved hemodialysis system utilizes a second polymeric membrane having dialyzate in contact with one surface and a urea decomposition solution in contact with the other surface. The membrane selectively passes urea from the dialyzate into the decomposition solution, while preventing passage of positively charged metal ions from the dialyzate into the solution and ammonium ions from the solution into the dialyzate.

DERIVATION OF PRESBYCUSIS AND NOISE INDUCED PERMANENT THRESHOLD SHIFT (NIPTS) TO BE USED

FOR THE BASIS OF A STANDARD ON THE EFFECTS OF NOISE ON HEARING

Daniel L. Johnson Sep. 1978 53 p refs Sponsored in part by EPA
(AF Proj. 7231)
(AD-A071310; AMRL-TR-78-128) Avail: NTIS HC A04/MF A01 CSCL 06/19

This report provides various sets of tables that attempt to summarize much of the existing knowledge of the expected effects of noise on the hearing threshold levels of a population. Relations between noise exposure and Noise Induced Permanent Threshold Shift (NIPTS) for different audiometric frequencies are provided. Six different data sets of presbycusis (the effects of aging on hearing thresholds) are provided. Details for combining the effect of NIPTS to different presbycusis bases are provided. Three methods are suggested for presentation of hearing loss data. These are: (1) direct use of NIPTS, (2) calculation of hearing risk (the change in percent of the population whose hearing exceeds a certain value, and (3) use of a value (called units of potential compensation) that is related to the total compensation that might be paid due to hearing loss. The last method is new and was developed especially because of criticisms of the first two methods. The combined average of the frequencies of 500 Hz, 1000 Hz, 2000 Hz and 3000 Hz are analyzed in great detail and 10 tables are provided for describing the affects of noise on this frequency combination. A computer program for calculating hearing risk and units of potential compensation is provided. GRA

THREE INSTRUMENTS FOR ASSESSMENT OF WBGT AND A COMPARISON WITH WGT (BOTSBALL)

B. Onkaram, L. A. Stroschein, and R. F. Goldman 14 Sep. 1979 28 p refs
(DA Proj 3E1-62777-A-845)
(AD-A074979; USARIEM-M-24/79) Avail: NTIS HC A03/MF A01 CSCL 06/19

Environmental heat stress, expressed as the ambient wet bulb globe temperature (WBGT), was measured using three different WBGT instruments: (a) the conventional shaded dry bulb, 15.2 cm black globe and naturally convected wet bulb thermometers; (b) a miniaturized thermometer kit; (c) a commercial WBGT instrument using thermistor sensors, and the WBGT was compared with (d) the ambient wet globe temperature (WGT) measured by a Botsball. Visual observations were made on the instruments at regular intervals and an automated data collection system was also used to obtain data from thermocouples attached to the instruments. Statistically significant differences in WBGT readings were found among the instruments; however, the difference for a given environment was usually less than 0.5 C. Readings taken by visual observations resulted in WBGT values which differed by less than 0.3 C from those calculated from the automated data collection system. By using an equation derived for the Botsball, WBGT - 1.044 WGT - 0.187 in C, it is possible to convert the Botsball thermometer dial to indicate the conventional WBGT for outdoor environments; it then becomes a simple instrument for assessing environmental heat stress at the work site. ANTHROPOMETRIC SIZING, FIT-TESTING AND EVALUATION OF THE MBU-12/P ORAL-NASAL OXYGEN MASK

Milton Alexander (Aerospace Med. Res. Lab.), John T. McConville, and Ilse Tebbets Wright-Patterson AFB ARML Aug. 1979 33 p refs
(Contract F33615-79-C-0511; AF Proj. 7184)
(AD-A074723; AMRL-TR-79-44) Avail: NTIS HC A03/MF A01 CSCL 06/17

This report describes the anthropometric sizing procedures used in the developement of the MBU-12/P oral-nasal oxygen mask and documents results of subsequent fit-testing and evaluation of the mask. A successor to the MBU-5/P, the MBU-12/P is designed to withstand the G and Q forces in the newer high performance aircraft as well as to provide a better fit and improved visibility. Sizing analysis and fit-testing revealed that four sizes of the MBU-12/P are sufficient to cover the USAF male flying population; the anthropometry and statistics upon which this decision was based are described in this report. Also documented here are the results of a number of ground and flight tests conducted over a period of four years which provide both objective and subjective evidence that the MBU-12/P is a well fitting mask which successfully achieves its design objectives. Subjects of all the tests were experienced aircrew whose head and face measurements were representative of a full range of the USAF flight crew population. Results of all the fit test/evaluations revealed a high degree of user acceptance and a decided preference for the MBU-12/P when compared to the older MBU-5/P. GRA

EARLY TRANSIENT INCAPACITATION: A REVIEW WITH CONSIDERATION OF UNDERLYING MECHANISMS

D. O. Carpenter Apr. 1979 19 p refs
(AD-A071803; AFRRI-SR-79-1) Avail: NTIS HC A02/MF A01 CSCL 06/18

Early transient incapacitation (ETI), which is a decrement in the performance of a specified task resulting from the effects of supralethal ionizing radiation exposures, has been observed in a number of animal species. Since nuclear weapons result in radiation fields sufficient to cause ETI in personnel that may be exposed, an understanding of the mechanism of this phenomenon is essential for the development of a rational plan for preventing or reversing the effect. This report is a review of the behavioral experiments concerning ETI and presents a critical analysis of available experimental information as to the cause of the phenomenon. It appears that the primary cause of ETI in experimental animals is probably faintness resulting from a fall in cerebral blood flow due to the direct action of histamine on blood vessel smooth muscle cells. A CONSIDERATION OF FACTORS CONTRIBUTING TO STRENGTH DIFFERENCES IN MEN AND WOMEN M.S. Thesis

Theodore M. Printy Jun. 1979 80 p refs
(AD-A072671) Avail: NTIS HC A05/MF A01

The expansion of opportunities for women in today's military has increased the importance of understanding how and why men and women differ in strength, stamina, and work capacity. The present effort discusses how the different physiological/anatomical characteristics of the sexes form a basis for physical strength differences. Other factors, such as age, stature, weight, cultural influences, biomechanics, and training contribute to the significant differences in physical strength capabilities which are demonstrated both as to scope and degree. With an understanding of the strength capabilities of men and women and a comprehensive understanding of job requirements, the effective and efficient utilization of both sexes may be achieved. GRA

MEASUREMENT OF RESISTIVE TORQUES IN MAJOR HUMAN JOINTS Final Report, 1 Apr. 1976 - 30 Sep. 1978

Ali Erkan Engin Wright-Patterson AFB AMRL Apr. 1979 156 p refs
(Contracts F33615-76-C-0505; DOT-HS-6-01331; AF Proj. 2312)
(AD-A071170; AMRL-TR-79-4) Avail: NTIS HC A08/MF A01 CSCL 06/16

The major articulating joints considered are the shoulder, knee, hip, elbow and ankle. Due to drastic postmortem changes of the biomechanical response of the body tissues, the research is conducted with some obvious limitations on live human subjects. The major components of the specially designed and built experimental apparatus are a subject restraint system, a global force applicator (GFA), and an exoskeletal device (ESD). The ESD is used in monitoring the kinematics of the motion between the fixed and the moving body segments and the forces are applied to the moving body segment by means of the GFA. Design of both the ESD and GFA are similar, each containing eight high precision potentiometers. The experimental apparatus and the associated theoretical concepts are utilized to achieve at least three major tasks. These tasks are the quantitative determination of (a) the voluntary range of motion (b) the resistive force and moments and (c) the resistive torques for the rotational motion of the body segments about their long bone axes. Although the majority of the results presented are on the passive resistive force, moment and torques for the major articulating joints of three subjects, some results on the magnitudes of the active resistive muscle force, moment and torque vectors are also presented for the same subjects. PRELIMINARY INVESTIGATION OF PILOT SCANNING TECHNIQUES OF DIAL POINTING INSTRUMENTS
Randall L. Harris, Sr. Nov. 1979 22 p refs
(NASA-TM-80079) Avail: NTIS HC A02/MF A01 CSCL 05H

Two pilots' methods of looking at instruments with needle pointers in a fixed base helicopter simulation were observed. A total of 45 runs were analyzed for each pilot. The data indicated that two apparently different techniques were being used; one looking at the needle point, the other looking at a fixed spot on the instrument and reading the needle direction parafoveally. The latter technique is found to be somewhat faster with both pilots accomplishing the flying task. M.G.

VALIDATION AND ERROR IN MULTIPLICATIVE UTILITY FUNCTIONS Research Report, Oct. 1977 - Dec. 1978
F. Hutton Barron Dec. 1978 52 p refs Prepared in cooperation with Univ. of Southern California
(Contract N00014-76-C-0074)
(AD-A073362; USC-001922-2-T; SSRI-RR-78-2) Avail: NTIS HC A04/MF A01 CSCL 05/10

In this report an approach to the concept of error in utility assessment is proposed. Three components of error are considered and each component is related to four separate elicitation methods-all in the context of a general multiplicative multiattribute utility model. The methods are Keeney-Raiffa (1976) procedure, SMART (Edwards, 1977), a social judgment theory (SJT) based regression model (Hammond, Stewart, Brehmer and Steinmann, 1975) and a new method called Holistic Orthogonal Parameter Estimation or HOPE (Barron and Person, 1978). If a general multiplicative model can be assumed to be an appropriate representation of the decision maker's basic preference structure, error can occur in the direct estimation of the scaling constants and univariate utility functions for decomposition methods (Keeney-Raiffa and SMART), or in the holistic assessments for holistic methods (SJT and HOPE). Individual estimates may be merely noisy or may be fundamentally incorrect. Furthermore, the utility model may be incorrectly specified; for example, an additive model, rather than a multiplicative model, may be used. The four assessment methods are considered in conjunction with errors of each kind. Author (GRA)

A CRITERION VALIDATION OF MULTIATTRIBUTE UTILITY ANALYSIS AND OF A GROUP COMMUNICATION STRATEGY Research Report, Oct. 1977 - Dec. 1978
Lee C. Eils, III and Richard S. John Dec. 1978 53 p refs
Prepared for Decisions and Designs, Inc., McLean, Va.
(Contract N00014-76-C-0074)
(AD-A073364; USC-001922-4-T; SSRI-RR-78-4) Avail: NTIS HC A04/MF A01 CSCL 05/10

This study investigates the use of an external criterion for validating additive utility assessments under certainty. Utilities were elicited from twenty-four groups via consensus judgment for ten hypothetical applicants for bank credit cards. The research design completely crossed two factors relevant to group utility assessment: (1) using a decomposition (MAUA) procedure or not, and (2) using a formal group communication strategy or not. The quality of each group's utility judgments was defined to be the Pearson produce-moment correlation between the group's judged utilities and utilities output from a configural (nonlinear) model used by Security Pacific National Bank in evaluating applicants for Master Charge. Group satisfaction measures were also obtained. The decomposition methodology and the group communication strategy both aided groups in making assessments that are more consistent with those of the bank model, which is based on a systematic collection and interpretation of a large amount of relevant data. Simplified procedures for obtaining weight parameters in the multi-attribute utility analysis yielded better overall utilities than more complicated ratio-estimation techniques. GRA

IMPORTANCE WEIGHT ASSESSMENT FOR ADDITIVE, RISKLESS PREFERENCE FUNCTIONS: A REVIEW Research Report, Oct. 1977 - Dec. 1978
Richard S. John and Ward Edwards Dec. 1978 72 p refs
Prepared in cooperation with Univ. of Southern California
(Contract N00014-76-C-0074)
(AD-A073365; USC-001922-5-T; SSRI-RR-78-5) Avail: NTIS HC A04/MF A01 CSCL 05/10

One of the more useful tools in decision analysis is the riskless, additive multiattribute utility (MAU) model. The most difficult task in the application of MAU models is that of estimating the importance weight parameters. Two general approaches to the weight estimation problem are extensively reviewed in the present paper: direct subjective estimation and indirect holistic estimation. Various methods for directly assessing importance weights are catalogued, including ranking, fractionation, subjective-estimate methods, and paired-comparison procedures, and their relationship to one another is discussed. The so-called indirect holistic methods, including unbiased and biased regression analyses, the ANOVA and fractional ANOVA paradigms, and the indifference techniques of pricing out and trading off to the most important dimension, are all explained with particular emphasis on their common relationship to the general linear model. ARE IMPORTANT WEIGHTS SENSITIVE TO THE RANGE OF ALTERNATIVES IN MULTIATTRIBUTE UTILITY MEASUREMENT Research Report, Oct. 1977 - Dec. 1978
William F. Gabrielli, Jr. and Detlof VonWinterfeldt Dec. 1978 47 p refs Prepared in cooperation with Univ. of Southern California
(Contract N00014-76-C-0074)
(AD-A073366; USC-001922-6-T; SSRI-RR-78-6) Avail: NTIS HC A03/MF A01 CSCL 05/10

Scaling factors in multiattribute utility measurement can either be assessed directly as importance weights or indirectly by indifference judgments. Critics of the importance weight interpretation of scaling factors argue that importance weights are not sensitive to ranges of alternatives and thus cannot be used to match standardized single attribute utility functions. To examine the range sensitivity of importance weight judgments two experiments were designed. In the first experiment college students gave relative importance weight judgments for a number of attributes when evaluating apartments and liquified natural gas plant locations. After the initial importance weight assessments

the range of alternatives in one attribute was changed and subjects reassessed their weights. Although subjects were explicitly instructed to take ranges into account when making these judgments, they were unable to adjust their weights appropriately. To magnify possible range effects a second experiment examined a very simple two attribute car evaluation problem. Subjects were asked directly if weights should change after the range in one attribute was doubled. Most subjects indicated that there should be no change. The results of these experiments suggest that subjects have plausible ranges in mind when assessing importance weights and that they are unwilling to change weights after relatively spurious changes in the alternative set.

SUBJECTIVE VERSUS STATISTICAL IMPORTANCE WEIGHTS. A CRITERION VALIDATION Research Report, Oct. 1977 - Dec. 1978
Richard S. John and Ward Edwards Dec. 1978 52 p refs
Prepared jointly with Univ. of Southern Calif., Los Angeles
(Contract N00014-76-C-0074)
(AD-A073367; SSRI-RR-78-7; USC-001922-7-T) Avail: NTIS HC A04/MF A01 CSCL 05/10

The present paper proposes a research paradigm for comparing weight estimates to empirically derived 'true' weights, thus obtaining a measure of the criterion validity of different weight estimation techniques. Subjects are first taught a multi-attribute utility (MAU) model via multiple-cue probability learning (MCPL) and outcome feedback. Then, various assessments of the importance weight parameters for the model attributes are obtained. Composites formed from these weights are subsequently compared to composites formed from optimal statistical weights derived from outcome feedback. Data are reported from 17 subjects who were taught one of three 'diamond worth' MAU models in 100 feedback trials. The models all involved four attributes (cut, color, clarity, and carat weight), and varied in the 'environmental correlations' among the dimensions (either (1) all uncorrelated, (2) one large positive correlation, or (3) two large negative correlations). The results of the present study are discussed from both an applied and theoretical perspective. To the decision analyst in the field, the present results give support to the belief that the parameter estimates obtained from clients define a 'true' normative preference function. Theoretically, the findings of this study are strong evidence that people are aware of their own cognitive processes.

EFFECT OF PERIPHERALLY PRESENTED VISUAL SIGNALS ON PILOT PERFORMANCE DURING FLIGHT SIMULATION Final Technical Report, Oct. 1977 - Sep. 1978
John M. Bermudez, Jock C. H. Schwank, Thomas M. Longridge, Thomas M. McCloy, and Bruce A. Smith Jun. 1979 21 p refs
(AF Proj. 7184)
(AD-A073604; AMRL-TR-78-120) Avail: NTIS HC A02/MF A01 CSCL 05/5

Recent theoretical developments have stimulated interest in the development and testing of peripheral vision displays which could be used to monitor the control of aircraft attitude. This study investigated the ability of pilots to attend to peripherally presented attitude information via LED displays while simultaneously engaging in foveal processing of an instrument array during a complex maneuver in flight simulator. Twenty-four pilots were divided into two groups of twelve. One group performed vertical S maneuvers using an LED display that indicated an out-of-tolerance condition in compass heading (steady LED). The second group used an LED that provided both out-of-tolerance information and rate-of-error information (strobe LED). All pilots were pre-trained to criterion. Both groups performed under each of three display conditions: Normal (standard round compass dial), Redundant (dial and LED), and Peripheral (LEDs-only). There were no statistically significant differences between the steady LED display and the strobing LED display. Overall, the results suggest that peripheral displays are at least as effective as compass dials for monitoring purposes, and such displays might prove useful as adjunct training aids with the potential for improving safety.

A STUDY IN PROCEDURAL MANIPULATION OF LOCUS OF CONTROL M.S. Thesis - North Carolina Central Univ. Final Report
Vernon Webster Hatley 13 Apr. 1979 72 p refs
(AD-A068658) Avail: NTIS HC A04/MF A01 CSCL 05/10

Specific locus of control change techniques were developed, examined and tested on one hundred twenty-eight (128) matched students in a general psychology class at North Carolina Central University during the spring semester of 1979. This study investigated the possibility of changing locus of control orientation in college students. Additionally, pretest locus of control scores of students who dropped the course were compared with those completing it. The experimental design was a two by four (2 x 4) matched group design. Presumed change in pretest-posttest locus of control scores as measured by Rotter's Internal External Locus of Control Scale and pretest locus of control scores of students who dropped the course were the dependent variables. Results revealed that locus of control scores in the experimental group shifted significantly (p less than .05) in the internal direction while those in the control condition moved toward an external orientation. Externals in the experimental group contributed significantly (p less than 0.5) to the overall change. Internals were found to move toward externality. The findings confirmed the contention that locus of control orientation can be influenced toward internality. Recommendations are offered for use of locus of control intervention techniques in academic settings.

Volunteer subjects have participated in a series of experimental group missions involving continuous residence for varying periods in the programmed environment. The methodology involved in these ongoing studies extends the applications of performance programming technologies detailed in prior publications. The experiments focus upon an explicit analysis of the conditions under which interrelationships between participants and experimenters influence performance effectiveness. To assess potential interrelationships between physiological status and performance effectiveness and productivity, four measures were obtained while subjects concurrently operated the performance battery: (1) heart rate, (2) frontalis EMG, (3) skin temperature, and (4) skin conductance. Urine free cortisol levels were also determined from analyses of total urine volume which was collected throughout the mission. A strong overall relationship was observed between individual productivity and mean daily urine free cortisol. These observations together suggest that the stress of sustained high productivity along with prolonged performance accuracy on a demanding task may render an individual vulnerable to disruptive emotional reactions such as those provoked by the avoidance phase of the study.

ABILITY, INVOLVEMENT AND CLIMATE AS MULTIPLE AND INTERACTIVE PREDICTORS OF PERFORMANCE
R. Gene Hoffman Apr. 1979 41 p refs
(Contract N00014-75-C-0884; RR0420402)
(AD-A068891; RR-21) Avail: NTIS HC A03/MF A01 CSCL 05/10

Student ability, involvement in the class, and classroom climate created by the instructor activities were examined as multiple and interactive predictors of course performance for 915 students in 74 sections of a mathematics course. Climate was defined in two ways: (1) as individual perceptions and (2) as shared perceptions. Two parallel analyses were conducted using the two definitions of climate. Each analysis resulted in ability, involvement and climate contributing unique variance in the prediction of student examination performance on a common exam. Climate dimensions contributing to performance were coordination of class activities, instructor skill, and the extent of critical demands (a negative relationship). The most significant difference between the two analyses was the appearance of a significant ability X coordination interaction in the analysis using shared climate perceptions. This difference was interpreted to be the result of a confounding of the interaction in the individual perceptions of coordination. The relationship between the interaction and predictive accuracy was explored. GRA

WORK PERFORMANCE AS A FUNCTION OF THE INTERACTION OF ABILITY, WORK VALUES, AND THE PERCEIVED WORK ENVIRONMENT

Robert Lee Hannon Apr. 1979 165 p refs
(Contract N00014-75-C-0884; RR0420402)
(AD-A068893; RR-22) Avail: NTIS HC A08/MF A01 CSCL 05/10

Literature pertaining to the prediction of performance from ability, motivation and their interaction was reviewed. Three personal traits (achievement motivation, locus of control, and bureaucratic values) are examined as possible antecedents of work motivation and performance. A model of work motivation that depends on the strength of the personal traits interacting with their environmental compatibility was developed. An empirical study on 417 police officers was conducted to test hypotheses generated from the models. Measures of the personal traits were developed and administered along with a questionnaire used to ascertain perceptions of the work environment. Supervisor's ratings of performance were collected as well as demographic and ability measures. Moderated multiple regression analyses found strong evidence for the performance-related validity of the work motivation model. Neither ability nor the ability-motivation interaction showed any relationship to performance. GRA

METHODOLOGICAL AND CONCEPTUAL ISSUES IN UNDERSTANDING ABILITY-PERFORMANCE RELATIONSHIPS Final Report

Benjamin Schneider Apr. 1979 36 p refs
(Contract N00014-75-C-0884; RR0420402)
(AD-A068894; RR-25) Avail: NTIS HC A03/MF A01 CSCL 05/10

This final report presents summaries of a series of technical reports concerned with individual non-ability and contextual variables as contributions to ability-performance relationships and the prediction of work performance. Theoretical papers and laboratory and field research efforts are summarized. It was concluded that situational variables conceptualized and operationalized in a number of different ways contribute additively, but not interactively, to the prediction of performance. Also included in this report is a list of publications accomplished under this contract. GRA

RULE LEARNING AND SYSTEMATIC INSTRUCTION IN PILOT TRAINING Final Report, 1 Oct. 1977 - 31 Dec. 1978

Vernon S. Gerlach Mar. 1979 30 p
(Grant AF-AFOSR-2900-76; AF Proj. 2313)
(AD-A068906; TD-3; AFOSR-79-0609TR) Avail: NTIS HC A03/MF A01 CSCL 05/9

Four related lines of endeavor were pursued. Central to these activities was the research on algorithmized instruction as a form of rule learning and its effect on the acquisition of complex human behaviors. This theme was implemented in studies on the role of performance objectives in instructional systems design, on the role of self-evaluation and its relationship to performance measurement, on the use of computer models in defining algorithms involving rule-using behavior, and an observation regarding the use of the Pearson product-moment correlation in performance measurement. GRA

RATING ERRORS OF INCONSISTENCY AS A FUNCTION OF DIMENSIONALITY OF BEHAVIORAL ANCHORS

Bruce L. Katcher and C. J. Bartlett May 1979 25 p
(Contract N00014-75-C-0884; RR0420402)
(AD-A068922; RR-24) Avail: NTIS HC A02/MF A01

The present study focuses upon rating errors of inconsistency in multidimensional behavior-specific rating scales used for purposes of performance appraisal. The hypothesis that rating scales which are more nearly unidimensional will result in a fewer rating errors of inconsistency was tested using a Mixed Standard Rating Scale developed for police supervisory personnel. Two measures of unidimensionality were used. The correlations between the indices of unidimensionality and rating inconsistency across ten rating dimensions were significant and in the predicted direction, confirming the hypothesis. The implications of the results for behaviorally anchored rating scales are discussed. GRA

A MIND/BRAIN/MATTER MODEL CONSISTENT WITH QUANTUM PHYSICS AND UFO PHENOMENA

T. E. Bearden 1979 41 p
(AD-A068988) Avail: NTIS HC A03/MF A01 CSCL 05/10

The author introduces a speculative model of mind and matter and their interaction that is consistent with the experimental basis of physics, and which offers mechanisms for paranormal phenomena of all types, including UFO phenomena. Certain conclusions are reached by a new fourth law of logic, which is briefly described and summarized. A new photon interaction model of quantized observable change is also presented. A solution to the problem of the nature of mind is generated, using the author's fourth law of logic, and a seven-dimensional hyperspatial physical model of a living biosystem is developed. Using this basic model, an infinite-dimensional cotemporal hyperspatial model of the physical universe complete with all its life forms is constructed. Levels of unconsciousness-including the collective human species unconscious--emerge naturally as types of crosstalk between hyperframes. By the author's formula, the psychokinetic power of a mind level increases exponentially as the number of biosystem stages involved. At the level of the collective human species unconscious, the psychokinesis is sufficient to materialize symbolic tulpoids (thought forms), given a sufficient stress stimulus in large groups. Using the cold war as the major stress stimulus on mankind since World War II, the author shows that most major UFO waves in the literature precisely fit the model. GRA

PROCESS MODEL OF HOW THE HUMAN OPERATOR TRACKS DISCONTINUOUS INPUTS Final Report, 1 Jul. 1977 - 30 Sep. 1978

Richard J. Jagacinski, Walter W. Johnson, E. James Hartzell, Sharon Ward, and Kaile Bishop Dec. 1978 32 p refs
(Grant AF-AFOSR-3288-77; AF Proj. 2312)
(AD-A069001; OSURF-760640/784688; AFOSR-79-0607TR) Avail: NTIS HC A03/MF A01 CSCL 05/10

Two basic research projects were pursued. In conjunction with personnel at the 6570th Aerospace Medical Research Laboratory, Human Operator Effectiveness Branch, experiments determined that the time to acquire stationary targets with position and velocity control systems was a linear function of an Index of Difficulty measure. This measure is a logarithmic function of initial target displacement and target width. The linear relationship with capture time represents an extension of Fitts' Law, known to hold for discrete movements performed with a physical stylus. The slope of the linear relationship between capture time and the Index of Difficulty was considerably steeper for the velocity control system and was slightly steeper for greater initial target uncertainty. The second project investigated the capture of moving targets with three different control systems: (1) two independent position controls, PP, (2) two independent velocity controls, VV, and (3) one position and one velocity control, PV. The PV system yielded significantly faster capture times than the PP system. However, due to the development of two different control strategies with the VV system the difference between the VV and the other systems was not statistically significant. Further research is recommended to clarify this latter result. GRA

A FACILITATION EFFECT IN ORIENTATION DISCRIMINATION
John Lott Brown and Iris M. Kortela 1976 29 p refs
(Contracts N00014-76-C-0189; NEI-ROI-EY-00680)
(AD-A072726; TR-76-2) Avail: NTIS HC A03/MF A01 CSCL 06/16

The minimal stimulus for orientation discrimination consists of two spots of light which define the orientation of an imaginary line. Luminance thresholds for discrimination of orientation were measured with two 5 min test spots, separated by 10, 20, 30 or 40 min of arc, located approximately 2 deg from the fovea. Test flashes were of 2 msec duration and varied in temporal relation from simultaneity to nearly 0.5 sec asynchrony. When measurements were made by an ascending method of limits with both test flashes increasing together, luminance thresholds for orientation discrimination were close to light detection thresholds and were uninfluenced by the temporal relation. When one of the flashes was presented by a constant luminance 0.6 log unit above detection threshold and the luminance of the other was the dependent variable, the luminance threshold for discrimination of orientation of the two spots varied with their temporal and spatial relations. For 30 min separation it was approximately 0.4 log unit below light detection threshold when the variable luminance spot preceded the fixed luminance spot by about 140 msecs for each of two observers. Results with haploscopic presentation suggest that the effect may represent facilitation at the cortex. GRA

SLEEP AND BODY RHYTHM DISTURBANCE IN LONG-RANGE AVIATION. THE PROBLEM AND A SEARCH FOR RELIEF
Frank H. Hawkins Sep. 1978 98 p refs
Copyright. Avail: Issuing Activity

The effect of sleep disturbance and deprivation and body rhythm disruption in long-range aviation and on the performance of flight crews was investigated. The theory of sleep and body rhythms is presented and discussed. Human performance and sleep is also discussed. Current relief efforts are described along with possible alternative ways for relief. Some of the alternatives are autogenic training, progressive relaxation, auto-hypnosis, yoga, meditation, and biofeedback. The study concludes that for safety, social, and economic reasons, it would be advisable to research more fully the sleep problem in aviation. R.E.S.

REGENERATIVE CO2 REMOVAL FOR PLSS APPLICATION Final Report
D. B. Heppner, R. R. Woods, and F. H. Schubert Oct. 1979 64 p refs
(Contract NAS9-15218)
(NASA-CR-160419; LSI-TR-319-31-6) Avail: NTIS HC A04/MF A01 CSCL 06K

Various concepts for the design of the nonelectrochemical absorber were defined and evaluated. A preliminary design based on the use of hollow fiber membranes was developed. Small scale bench testing demonstrated the carbon dioxide removal capability and provided design data for scale-up to the one person level. A full scale conceptual design of the absorbent regeneration hardware using six electrochemical cells was also completed. The design was supported by single cell testing and showed that a full scale regeneration system, operating continuously over 24 hours, can regenerate the absorbent from one extravehicular activity mission. The single cell regeneration hardware was operated for over 800 hours. R.E.S.

MODELING BIODYNAMIC EFFECTS OF VIBRATION, FIFTH YEAR Final Scientific Report
Henry R. Jex and Raymond E. Magdaleno Aug. 1979 73 p refs
(Contract F44620-73-C-0075; AF Proj. 2312)
(AD-A073819; STI-1037-5; AFOSR-79-0960TR) Avail: NTIS HC A04/MF A01 CSCL 05/5

The biomechanical feedthrough of vertical and/or fore-aft vibration from a seat, to (and through) various parts of the torso, limbs, hands, and head, to a spring-restrained control stick has been modeled over a 5-year effort using prior Air Force and other data bases. This final report summarizes the project results and provides a User's Guide to BIODYN-78, an interactive, remote-access, digital computer program for exercising the model. The model involves 77 postural and physiological parameters to define a broad range of seating/control/display arrangements from supine to erect. An internal routine automatically trims the Torso/Head/Limb system at the desired angles and computes linearized equations of motion, which are solved for their eigenvalues and resulting transfer functions using highly refined computing routines. In distinction from most past models, this model represents several degrees-of-freedom simultaneously, e.g., vertical and fore/aft shoulder motion, angular head-bobbing, constrained elbow motion, stick-grip-interface force, muscle forces, and stick angular motion, among many others. GRA

METHODS FOR EVALUATING THE PHYSICAL AND EFFORT REQUIREMENTS OF NAVY TASKS: METABOLIC, PERFORMANCE, AND PHYSICAL ABILITY CORRELATES OF PERCEIVED EFFORT Technical Report, 1 May 1978 - 30 Apr. 1979

Joyce C. Hogan, George D. Ogden, Deborah L. Gebhardt, and Edwin A. Fleishman Apr. 1979 73 p refs
(Contract N00014-78-C-0430)
(AD-A072497; ARRO-3034-R79-3) Avail: NTIS HC A04/MF A01 CSCL 06/16

Two studies examined the reliability and validity of an index of perceived physical effort for assessing the metabolic and ergonomic costs of task performance. In each study, tasks whose actual performance costs were either available from work physiology literature or were calculated mathematically were rated by subjects who had no work cost information on physical effort required in the task. In the first study, subjects (N=50) completed pencil and paper ratings of tasks whose metabolic costs were known using physical ability dimensions and the index of perceived physical effort. Results indicated high correlations between metabolic costs and ratings of physical effort as well as ratings of various strength and stamina factors. In the second study, subjects (N=20) performed 24 diverse manual materials handling tasks whose ergonomic costs were calculated and rated each completed task on the index of physical effort. Results indicated a substantial relationship between actual ft-lbs. of work and ratings of physical effort. Implications of the results are discussed in terms of the inherent psychometric properties of the index and its applied utility for determining criterion performance standards and job-related training. GRA

DESIGN CRITERIA FOR CHARACTERIZING INDIVIDUALS IN THE EXTREME UPPER AND LOWER BODY SIZE RANGES

Kathleen Robinette and Thomas Churchill Wright-Patterson AFB, Ohio AMRL Jun. 1979 92 p refs
(Contract F33615-78-C-0508; AF Proj. 7184)
(AD-A072353; AMRL-TR-79-33) Avail: NTIS HC A05/MF A01 CSCL 06/14

Designers commonly attempt to represent a range of human body sizes by using human manikins, three-dimensional forms, computer simulations, and various other models. These analogues are developed from a limited number of body size groupings, often utilizing 5th, 50th, or 95th percentile values. There are serious limitations to this percentile approach, exemplified by the fact that at the ends of the distribution, percentile values are not additive. Focusing on the ends of the distribution, where limitations are most intense, this report pinpoints and illustrates problems associated with the use of percentile values, and describes two alternative approaches: subgroup and regression values. Either of these altneratives offers significant improvement over the percentile approach and can be used to characterize any portion of the body size distribution. Regression equations for predicting dimensions from weight and stature and from weight and sitting height are provided to aid designers in computing dimensional body size data needed for cockpit and other work station layouts. GRA

TIME SIMULATION OF AN AIR SURVEILLANCE TASK WITH VARYING AMOUNTS OF RADAR INFORMATION

William H. Pearson Jun. 1972 28 p refs
(AD-A074866; AMRL-TR-72-74) Avail: NTIS HC A03/MF A01 CSCL 17/7

Subjects observed a computer display unit simulating radar noise and radar trails of 150 and 500 mph aircraft, one per minute on the average, over a 1000 mile square area. Radar information was stored, cycle by cycle, up to a limit of 3,5,7 and 9 twenty second cycles and then presented sequentially rapidly enough to give an illusion of movement in the trails. Subjects detected the presence of aircraft and controlled computer processing by lightpen and keyboard actions. Time-to-detect increased with radar information for 500 mph tracks but not for 150 mph tracks. Probability of detection increased with radar information for 150 mph trails but not for 500 mph trails. These results were interpreted as showing the disruptive effect of (1) simulated radar noise confounded with the amount of radar information because of information storing and (2) the interference of the easier-to-find 500 mph aircraft with the 150 mph aircraft. THE EFFECT OF LOCALLY APPLIED ORGANOPHOSPHATES ON MIOSIS AND ACETYLCHOLINESTERASE ADAPTATION TO CHRONIC TREATMENT

Didrik Malthe-Sorenssen, Nils E. Soli, and Frode Fonnum *In* AGARD Maintenance of Air Operations While Under Attack with Chem. Agents Sep. 1979 5 p refs

Avail: NTIS HC A04/MF A01

Topical administration of organophosphates to the eye of guinea pigs inhibited acetylcholinesterase of different parts of the eye to a different degree. The differences reflected most likely dilution of the agent caused by diffusion into the eye. The effect of locally applied organophosphates was ascribed to an effect on the iris and ciliary muscle and not on the retina. The degree of miosis and recovery of pupillary function after soman treatment correlated better to inhibition of external acetylcholinesterase than total acetylcholinesterase. Chronic treatment with soman reduced the miotic potency of soman and reduced the recovery time of the miosis. This adaptation was dependent on other factors than cholinergic. Local treatment of miosis with topical application of oximes to the eye reduced the miosis and reactivated acetylcholinesterase in the cornea and iris. The reactivation was enhanced in the presence of benzalkonium. Author

THERAPY ON NERVE AGENT POISONING

Nikolaus P. Weger *In* AGARD Maintenance of Air Operations While Under Attack with Chem. Agents Sep. 1979 4 p refs

Avail: NTIS HC A04/MF A01

The therapeutic properties of various combinations of the bispyridinium salts HS-3 and HS-6 and the cholinolytics atropine and benactyzine against soman poisoning were investigated in unanesthetized male beagles. Present data demonstrate that from all antidotes tested HGG-12-Cl and HGG-42-J in doses effective for treatment of men show good therapeutic effects in beagles poisoned with soman, sarin, and Vx. Best effect has HGG-42-J in a dose of 30 micron Mol/kg(= 18.27 mg/kg). In soman poisoning no reactivation of serum cholinesterase and cholinesterase in erythrocytes was observed. Other mechanisms of therapeutic activity must be explored. A.R.H.

APPROACHES TO CW AGENT AREA DETECTION SYSTEMS FOR AIRFIELDS

Francis T. Crimmins and John J. McCambridge *In* AGARD Maintenance of Air Operations While Under Attack with Chem. Agents Sep. 1979 10 p

Avail: NTIS HC A04/MF A01

United States Air Force (USAF) efforts to develop a chemical agent area detection system for the protection of air bases are examined. Point detection techniques which might provide a limited and interim area detection capability are discussed and the A/E23D-3 Chemical Agent Automatic Alarm and its characteristics are described. The USAF requirement for an instrument which will detect toxic chemical agents before they reach the intended target along with the capabilities such a detector must possess are presented. The Air Force's present views on how such a system might operate are explored. A.R.H.

N80-14734# Air Force Systems Command, Wright-Patterson AFB, Ohio. Life Support System Program Office.

PHILOSOPHY OF PROTECTION OF US AIRCREWS AGAINST CHEMICAL WARFARE AGENTS

John J. McCambridge and D. E. Root *In* AGARD Maintenance of Air Operations While Under Attack with Chem. Agents Sep. 1979 2 p

Avail: NTIS HC A04/MF A01

In 1975, the USAF recognized the need to provide protective equipment to aircrews that would allow them to accomplish

their operational missions after having been attacked by an enemy using chemical warfare agents. This requirement was deemed to be an urgent one; thus, a two phase program was initiated. Phase one was the development and production of near term equipment which would provide the required operational capability with delivery of equipment to the field to begin within two years. Phase two consists of a longer term program to provide more complete protection with a reduced operational burden.

CONCERNING INDIVIDUAL EQUIPMENT FOR FIGHTER PILOTS IN THE AIR FORCE [A PROPOS DES EQUIPEMENTS INDIVIDUELS DES PILOTES DE CHASSE DE L'ARMEE DE L'AIR]
P. H. V. Gaspa *In* AGARD Maintenance of Air Operations While Under Attack with Chem. Agents Sep. 1979 3 p In FRENCH
Avail: NTIS HC A04/MF A01

In addition to the protection provided for all the armed services by way of protective suits, gloves, foot coverings, and masks for filtering particles, aircraft pilots require equipment that must be integrated with the aircraft, with parachutes, with the oxygen supply, and with survival equipment. It must meet the particular specification to provide minimal comfort needed to maintain the potential psychophysiology of the pilots, so they can accomplish their mission (which is always delicate in three dimensional space) in the midst of toxic flight factors and enemy intervention. There must be no thermal nor respiratory constraints. The design of equipment cannot impede pilot movements, the observation of parameters useful for flight, the carrying out of certain commands, nor the tactile agility of the fingers. INTEGRATION OF PROTECTION AGAINST CHEMICAL WARFARE AGENTS WITH AIRCREW PERSONAL EQUIPMENT
John J. McCambridge and Charles H. Leone *In* AGARD Maintenance of Air Operations While Under Attack with Chem. Agents Sep. 1979 3 p

Avail: NTIS HC A04/MF A01

Protection of the aircrew member through personal equipment is a concept which assumes that such protection can not be provided in any other way. Current efforts to incorporate chemical defensive capabilities into protective equipment for the eyes, respiratory system, body, hands, and feet are described. Integration of chemical agent protection into life support systems on a superior plane would eliminate the need for providing protection through personal equipment - a shirt sleeve environment, so to speak. Such a concept would require protection of the cockpit interior at all times from the introduction of chemical agents and would require the effective filtration of influent air by the environmental control systems. A.R.H.

SURVEY OF METHODS TO ASSESS WORKLOAD
Bryce O. Hartman, ed. (School of Aerospace Med.) and Richard E. McKenzie, ed. (School of Aerospace Med.) Aug. 1979 160 p refs
(AGARD-AG-246; ISBN-92-835-1332-0) Avail: NTIS HC A08/MF A01

Methods of measuring aircrew workload are reviewed. The methods reviewed include areas of systems design engineering, operations research, the behavioral sciences, aerospace medicine, physiology, biochemistry, and biotechnology in general. The measurement domains include measures of sensory threshold, measures of sensory integration, cognitive function tests, measures of motor function, vigilance, reaction time, psychophysiologic responses, and physiologic and biochemical changes.

CONCEPTS OF WORKLOAD
Walter B. Gartner and Miles R. Murphy *In* AGARD Surv. of Methods to Assess Workload Aug. 1979 p 1-2 refs

Avail: NTIS HC A08/MF A01

A summary of the attempts made to quantify the workload imposed on a pilot by a particular aircraft design or operational procedure, or to access the effects of fatigue upon system performance are discussed in regard to the more precise specification of workload and fatigue concepts and to the adequacy of assessment criteria and techniques. The principle unresolved issues in conceptualizing and measuring pilot workload and fatigue are addressed. The conception of workload is divided into three functionally related components: (1) input load, (2) operator effort, and (3) work result. A.W.H.

AIRCREW WORKLOAD ASSESSMENT TECHNIQUES

Walter W. Wierwille, Robert C. Williges, and Samuel G. Schiflett (NATC, Patuxent River, Md.) *In* AGARD Surv. of Methods to Assess Workload Aug. 1979 p 19-54 refs

Avail: NTIS HC A08/MF A01

A classification scheme is presented which summarizes a survey and analysis of aircrew workload assessment techniques relevant to inflight test and evaluation considerations. Two dimensions consisting of universal operator behaviors and workload assessment methodologies were used in the classification scheme. The universal operator behaviors were classified into categories including perceptual, mediational, communication, and motor processes; whereas the workload assessment methodologies were cataloged under the general categories of subjective opinion, spare mental capacity, primary task, and physiological measures. An applicability matrix based on this classification scheme is presented which summarizes existing research on workload assessment methodologies. Procedures are described whereby this matrix is used as a guide for selecting candidate aircrew workload assessment measures for inflight evaluation. A brief overview of the various workload assessment techniques is presented along with a set of critical criteria that need to be considered in evaluating the feasibility of these measures for inflight environments. A.W.H.

N80-14747# Air Force Systems Command, Wright-Patterson AFB, Ohio. Human Engineering Div.

WORKLOAD ASSESSMENT METHODOLOGY DEVELOPMENT

Billy M. Crawford *In* AGARD Surv. of Methods to Assess Workload Aug. 1979 p 55-67 refs

Avail: NTIS HC A08/MF A01

The development of a method to determine efficient crew compositions, appropriate assignments of duties and responsibilities to crew members, and effective allocations of functions and tasks among men, machines and computers is discussed. The use of the method to identify the critical periods in a task or mission during which the operator's performance is particularly prone to degradation or failure because of work overload stress is examined. Emphasis is placed on man computer interactions and information processing/decision making functions which are not adequately accounted for by conventional human performance metrics, task analysis, time and motion, and time line methods. A.W.H.

N80-14748# School of Aerospace Medicine, Brooks AFB, Tex.

QUANTITATIVE MILITARY WORKLOAD ANALYSIS

Richard A. Albanese *In* AGARD Surv. of Methods to Assess Workload Aug. 1979 p 69-71 refs

Avail: NTIS HC A08/MF A01

A method of tradeoff analysis as applied to workload analysis in the military environment is discussed. It is suggested that workload studies be performed in a tradeoff setting which allows the analyst to estimate the return on investment he has earned through his proposed system modifications. The methodologies described employ mathematical modeling techniques, and it is reinforced that these techniques are an adjunct to, and not a replacement of, more traditional methods of workload analysis. VISUAL PERFORMANCE: A METHOD TO ASSESS WORKLOAD IN THE FLIGHT ENVIRONMENT

R. Simmons, M. Sanders, and K. Kimball *In* AGARD Surv. of Methods to Assess Workload Aug. 1979 p 73-81 refs

Avail: NTIS HC A08/MF A01

A method of assessing the workload requirements imposed on the visual system is discussed. The results suggest that the theory is a valuable tool in testing and determining what the visual workload level should be for combat proficient pilots, how long pilots with varying degrees of proficiency should be expected to fly in the combat environment, and aircraft design requirements (such as stability) to reduce the onset of fatigue-induced errors. Additionally, the theory can be utilized to test and determine varying mission related workload, as well as the workload required by special equipment such as the night vision goggles, navigation equipment, and experimental flight displays. K.L.

AIRCREW PERFORMANCE RESEARCH OPPORTUNITIES USING THE AIR COMBAT MANEUVERING RANGE (ACMR)

Clyde A. Brictson and Anthony P. Ciavarelli *In* AGARD Surv. of Methods to Assess Workload Aug. 1979 p 111-113 refs

(Contract N61339-77-C-0167)

Avail: NTIS HC A08/MF A01

Three years of aircrew performance measurement using the Navy's ACMR are presented as evidence of ACMR's research potential. Performance assessment methods used to evaluate pilot proficiency are described. The aircrew assessment methods are used to identify squadron performance differences, evaluate competitive exercises, and provide diagnostic training feedback to operational users. The use of continuously recorded quantitative measures from systems such as ACMR should stimulate more aircrew performance field research ideas. The availability of objective performance criteria promises to be of substantial benefit to both the operational user and the research community in such areas as pilot selection and training, fleet combat readiness, and pilot workload and stress. WORKLOAD AND STRESS IN AIR TRAFFIC CONTROLLERS

Carl E. Melton *In* AGARD Surv. of Methods to Assess Workload Aug. 1979 p 137-144 refs

Avail: NTIS HC A08/MF A01

Data collected at 14 air traffic control facilities regarding air traffic controller (ATCS) workload and urinary stress indicator hormone excretion is reviewed. The data show a significant relationship between objective workload measures (radio transmission time and traffic counts) and indexes of catecholamine excretion. Mean epinephrine excretion by ATCS's at six air traffic control towers, ranging from very low to very high traffic density, was significantly (R = 0.96) related to annual traffic counts at those towers. The sympatho-adrenomedullary axis that prepares the organism for fight or flight is applicable to ATCS's. The question of underload, optimum load, and overload is discussed. K.L.

INFLUENCE OF HYPOKINESIS ON PHYSIOLOGICAL FUNCTIONS IN FOWL

J. Nvota, D. Lamosova, D. Tesarova, V. Cierna, and P. Vyboh Dec. 1979 14 p refs Transl. into ENGLISH from Vet. Med. (Prague), v. 22, no. 7, 1977 p 425-432 Transl. by Kanner (Leo) Associates, Redwood City, Calif.

(Contract NASw-3199)

(NASA-TM-75999) Avail. NTIS HC A02/MF A01 CSCL 06B

The effects of hypokinesis and postincubation stress (which are characteristic for modern techniques of poultry cage keeping) on the endocrine functions, metabolic reactions, body weight growth and proteosynthesis in the muscle of cocks was investigated. The stress due to hypokinesis was observed in growing cocks housed in metallic cages in which they could hardly turn around. The findings obtained indicate that a 35-day hypokinesis did not exert any more significant influence both on physiological functions and body weight growth as well as on proteosynthesis in the muscle of cocks under study; however, it speeded up the protein metabolism in the muscle. The postincubation stress modified significantly the hypokinesis effect. Findings recorded in birds differed considerably from findings obtained in laboratory mammals, in which the hypokinesis induced significant changes in endocrine functions, body weight decrease and proteosynthesis disorders. A good tolerance of hypokinesis by fowl can be interpreted not only by the phylogenetic remoteness of the compared species but also by the domestication. R.E.S.

CHARGE SEPARATION IN SYNTHETIC PHOTO-REACTION CENTERS
J. J. Katz 1978 22 p refs Presented at the Workshop on Light-Induced Charge Separation at Interfaces in Biol. and Chem. Systems, West Berlin, 16 Oct. 1978
(Contract W-31-109-eng-38)
(CONF-781048-1) Avail: NTIS HC A02/MF A01

On the basis of electron paramagnetic resonance studies, there is good reason to suppose that the primary electron donor in plant and bacterial photo-reaction centers is a special pair of chlorophyll molecules. The donor-acceptor coordination interactions characteristics of chlorophyll are used to suggest a structure for the chlorophyll special pair. Chlorophyll special pairs with the suggested structure were prepared in the laboratory. These synthetic reaction centers mimic the essential features of P700 and P865 and provide a useful route to the study of electron transfer from in vivo photo-reaction centers. DOE

COMPARISON OF DIURNAL FLUCTUATIONS OF DISSOLVED INORGANIC CARBON AND ALGAL PRODUCTIVITY ESTIMATES IN AN OLIGOTROPHIC AND MESOTROPHIC FRESHWATER ENVIRONMENT
Paul A. Amodeo, Jr. and Nicholas L. Clesceri Jul. 1979 31 p refs
(Contract DI-14-34-0001-7172)
(PB-301201/0; OWRT-B-060-NY(1); W80-00002) Avail: NTIS HC A03/MF A01 CSCL 06C

Factors influencing the daily periodicity of algal carbon incorporation were investigated. Carbon, in the form of dissolved CO2, is proposed as a major limiting nutrient in both an oligotropic and mesotrophic environment. A relationship between diurnal fluctuations of dissolved inorganic and algal carbon uptake was demonstrated by use of carbon-14 as a radio-carbon tracer. A possible correlation of the above fluctuations with the excretion of organic matter by algae is proposed. Work was conducted at Gull Bay, Lake George, New York and Willsboro Bay, Lake Champlain, New York. GRA

WASTE STABILIZATION LAGOON MICROORGANISM REMOVAL EFFICIENCY AND EFFLUENT DISINFECTION WITH CHLORINE Final Report, Aug. 1975 - Aug. 1976
Bruce A. Johnson, Jeffrey L. Wight, David S. Bowles, James H. Reynolds, and E. Joe Middlebrooks Jul. 1979 386 p refs
(Contract EPA-68-03-2151)
(PB-300631/9; EPA-600/2-79-018) Avail: NTIS HC A17/MF A01

The project objectives are to evaluate: (1) the amenability of algae-laden lagoon effluent to chlorine disinfection; and (2) the performance of a multi-cell lagoon system in removing coliform bacteria by natural means without the need for disinfection. Results indicate that adequate disinfection was obtained with combined chlorine residual within a contact period of 60 minutes. Filtered effluent was found to exert less chlorine demand than unfiltered. Temperature, sulfide, and total chemical oxygen demand were the most important factors affecting the chlorine dose necessary to achieve a specified bacteriological quality. A mathematical model was developed for use in selecting the optimal chlorine dosages needed for achieving prescribed levels of disinfection. GRA

The subcellular structures of the myocardium, skeletal muscles, liver and kidneys of adult rats subjected to hypokinesia (in immobilization chambers) for 15, 30, and 45 days were studied. An anabolyser (retabolil) and vitamin D (a Ca metabolism regulator) were administered to two groups of rats. On the second week of hypokinesia, inhibition of synthesis processes was observed. Administration of retabolil increased protein synthesis both in the normal and hypokinesia-subjected rats; however, in the latter group, synthesis did not completely normalize, especially in the myocardium. Administration of vitamin D also stimulated protein synthesis, apparently by normalizing Ca tissue metabolism. The combined action of both preparations was the most effective in normalizing protein synthesis intensity. It was concluded that inhibition of synthesis is related to weakening of hormone synthesis induction and disorder of Ca metabolism. Author

DAYTIME VISUAL ACUITY OF OBSERVERS THROUGH A WINDOW WITH AND WITHOUT BINOCULARS
Herschel C. Self and Steve A. Heckart Jul. 1979 23 p
(AF Proj. 7184)
(AD-A074722; AMRL-TR-79-23) Avail: NTIS HC A02/MF A01 CSCL 05/5

Visual acuity with and without hand-held M-19 7x50 binoculars was tested inside and outside the cab of a Master Surveillance Control Facility (MSCF) Tower. High, medium and low contrast 3 bar resolution test charts were used at a 400 foot distance. Except for low contrast bar patterns, where loss was not large, unaided eye visual acuity was not impaired by cab windows. With binoculars there was a statistically significant, though not large, window-caused loss of visual acuity for all contrasts. Even so, binocular visual acuity for high, medium and low contrast patterns was 5.6, 5.5, and 4.8 times, respectively, better than unaided eye acuity. Recommendations for the MSCF, based on this study, were made. A section of the report examines visual considerations in fence surveillance. GRA

TOXIC POLYPEPTIDES AND UREMIA Final Progress Report, 1 Jun. 1978 - 31 May 1979
K. Ehrlich, E. Klein, F. F. Holland, Jr., and T. Turnham 2 Jul. 1979 47 p refs
(Contract N01-AM-8-2205)
(PB-301063/4; AK-1-8-2205F-79) Avail: NTIS HC A03/MF A01 CSCL 06C

Uremic serum ultrafiltrate was concentrated and fractionated on Bio-Gel P2 and Sephadex G15 columns. Sephadex fractions were tested for toxicity to human cells in culture. Fractions 1 and 2, containing peptide species with molecular weights greater than 700 daltons, inhibited 3H-thymidine uptake by HeLa and skin fibroblast cells more than the low molecular weight Sephadex material and an iso-osmolar control (saline). Fraction 2, containing molecules with molecular weights of angiotensin and vitamin B-12, inhibited 3H-thymidine incorporation the most (at 774 hours, the incorporation rate was only 2 percent of that of the control for one of the uremic ultrafiltrate concentrates). ELECTROMAGNETIC FIELDS IN BIOLOGICAL MEDIA. PART 2: THE SCAT PROGRAM, MULTILAYERED SPHERE, THEORY AND APPLICATIONS Final Report
Stanley M. Neuder Aug. 1979 30 p refs
(PB-300904/0; DHEW/PUB/FDA-79/8072;
FDA/BRH-79/114) Avail: NTIS HC A02/MF A01 CSCL 06R

The theory and applications of a computer program, SCAT, for calculating the scattering and power absorption of radiofrequency and microwave radiation by spherical lossy dielectric bodies exposed to linearly polarized plane wave fields are described. The irradiated body may be a homogeneous sphere or multilayered, spherically concentric regions of arbitrary radii. Each region can be made to simulate biological tissue by assigning the appropriate dielectric properties. Induced fields and absorbed power density within these regions may then be calculated for preselected irradiation frequencies. Several applications of the SCAT program are described and associated computer plots are presented and discussed. GRA

CIRCADIAN AND CIRCANNUAL RHYTHMS IN HEALTHY ADULTS
Alain Reinberg *In* AGARD Sleep, Wakefulness and Circadian Rhythm Sep 1979 13 p refs

Avail: NTIS HC A13/MF A01

Physiological processes in any living organism including man are not constant as a function of time: regular and predictable variations with period, tau, of about 24 hours (circadian), about 1 year (circannual) etc. can be detected. Each rhythm can be characterized by estimating such parameters as: acrophase theta (crest time), amplitude A and mesor M (rhythm adjusted mean). The estimation of tau, theta, A and M of a set of variables under specified experimental conditions enable the visualization of an aspect of the temporal organization (or biologic time structure). Aims of chronobiology are to quantify and investigate mechanisms of biological time structures. Biological rhythms and the related temporal organization are genetic in origin. However, one or several rhythm parameters may be influenced by cyclical variations of environmental factors (synchronizers or Zeitgeber). The latter has practical implications since phase shifts of synchronizers may occur with transmeridian flights, night-working and shift-working. Chronobiology also involves the study of rhythmic changes in endocrine activities (chronoendocrinology) and in drugs effects (chronopharmacology) F.O.S.

SLEEP DISTURBANCES IN HUMANS
Laverne C. Johnson *In* AGARD Sleep, Wakefulness and Circadian Rhythm Sep. 1979 16 p refs

Avail: NTIS HC A13/MF A01

Disturbed sleep results in feelings of fatigue and, usually, in impaired performance regardless of whether the disturbed sleep is due to excessive noise or a chronic sleep disorder. In addition to noise, some other environmental factors that disturb sleep are temperature, unscheduled operational demands that fragment sleep time, rotating shift-work schedules, and operational requirements that result in air travel across several time zones. While appropriate attention to sleep logistics may minimize the environmental causes of disturbed sleep, resolution of the disturbed sleep of those with sleep disorders is more difficult. The focus in sleep disorders must be on the individual. The major sleep complaint is insomnia, not enough sleep, usually due to prolonged sleep latency. A more serious medical problem, however, may be the complaint of excessive daytime sleep or hypersomnia. Most patients with complaints of hypersomnia are usually diagnosed as having narcolepsy or sleep apnea. Relative to narcolepsy, sleep apnea (episodes of respiratory arrest during sleep) has only recently received attention. In addition to a sleep problem, sleep apneic patients may have hypertension and/or cardiac arrhythmia. F.O.S.

VIGILANCE AND ATTENTION
M. Defayolle *In* AGARD Sleep, Wakefulness, and Circadian Rhythm Sep. 1979 13 p refs

Avail: NTIS HC A13/MF A01

The relations between vigilance and attention are considered using computer, psychological and physiological techniques. After considering the different types of available measures, the factors influencing attention are reviewed. The characteristics of signals, the environmental conditions, the individual features and the possible interactions between these factors are then studied. The various theories are reviewed and a mathematical model is proposed which integrates activation, the use of processing ability and filtering, taking into consideration the data relative to the environment and to motivation. In conclusion, different methods are proposed from ergonomical, psychological and pharmacological viewpoints. F.O.S.

BIOLOGICAL RHYTHMS OF MAN LIVING IN ISOLATION FROM TIME CUES
Elliot D. Weitzman, Charles A. Czeisler, and Martin C. MooreEde *In* AGARD Sleep, Wakefulness and Circadian Rhythm Sep 1979 9 p refs Prepared in cooperation with Harvard Med. School
Avail: NTIS HC A13/MF A01

The results are presented of prolonged measurements of sleep-waking functions in human subjects for periods of 25 to 105 calendar days in an environment free of all time cues. It was found that the biological rhythms of human beings free-run at periods greater than 24 hours, typically at approximately 25 hours. During free-running, the sleep to total time ratio remains constant, approximately .30. F.O.S.

N80-15814# Naval Health Research Center, San Diego, Calif.
SLEEP DISTURBANCE AND PERFORMANCE
Laverne C. Johnson *In* AGARD Sleep, Wakefulness and Circadian Rhythm Sep. 1979 15 p refs

Avail: NTIS HC A13/MF A01

While the type of sleep obtained does not appear to be an important factor in performance, the time of day the sleep is obtained and when the performance occurs are very important. Time-of-day effects are a more crucial factor in performance than the preceding sleep patterns. The effect of total sleep loss becomes pronounced after 48 to 60 hours, consistent performance decrement following reduced sleep or fragmented sleep was not found. Feelings of fatigue, however, are a consistent finding in all sleep-loss studies. A significant relation between sleep quality (good vs. poor sleep) and performance is not easily found. The deleterious effect of hypersomnia, especially that due to narcolepsy is discussed. F.O.S.

N80-15815# Centre National de la Recherche Scientifique, Paris (France). Lab. de Physiologie.
TOLERANCE TO SHIFT WORK: A CHRONOLOGIC APPROACH
Alain Reinberg *In* AGARD Sleep, Wakefulness and Circadian Rhythm Sep. 1979 11 p refs

Avail: NTIS HC A13/MF A01

The hypotheses was tested of possible relationships between the amplitude A of the circadian rhythm of oral temperature on the speed of adjustment during shift work, and tolerance to shift work. Study 1 involved 25 oil refinery operators. A negative correlation (r = -0.63; P less than 0.01) was found between the mean A and the acrophase shift delta O resulting from the first night-shift: the larger the A, the smaller the delta O. Study 2 involved 23 steel industry workers and 25 chemical industry workers with either good or poor tolerance to shift work. Tolerance was evaluated conventionally according to 3 types of complaints: digestive troubles, persistant fatigue, sleep alterations. Circadian A of oral temperature is larger in subjects who tolerate to shift work than in intolerant subjects. The study 3 involved 29 oil refinery operators and was designed to retest both hypothesis, their complementarity and to take different age groups into account. Good tolerance to shift work, over many years, appears to be associated with a large circadian amplitude and a slow adjustment during night-shifts (small delta O). F.O.S.

CIRCADIAN RHYTHMS IN AIR OPERATIONS
Karl E. Klein and Hans-M. Wegmann *In* AGARD Sleep, Wakefulness and Circadian Rhythm Sep. 1979 25 p refs

Avail: NTIS HC A13/MF A01

After a brief introduction into the principles of environmental and biological timing systems, the phenomenology of post-transmeridian de- and re-synchronization of circadian rhythms is presented, its control and modification through external and internal factors described, and the consequences for human efficiency and health discussed. There are conclusions drawn as to possible relief measures, formulas and models which define the physiological processes, and predict work loads occurring in transmeridian flight operations. Finally, the incorporation of circadian rhythm aspects into Rest/Duty Regulations is described. Author

N80-15817# Centre de Recherches du Service de Sante des Armees, Lyons (France).
PSYCHOSTIMULANTS
M. Defayolle *In* AGARD Sleep, Wakefulness and Circadian Rhythm Sep. 1979 12 p refs

Avail: NTIS HC A13/MF A01

The state-of-the-art of psychostimulants is reviewed, and a brief historical and geographical survey are presented. The basic neurochemical data on vigilance are considered and the various systems of mediators involved in synaptic conduction are differentiated. The methodology of therapeutic tests on psychotropes is then discussed. The effects induced by the use of the various types of drugs: noo-analeptics, nootropes, thymo-analeptics and metabolic adjuvants are considered. These data are incorporated into a general model of vigilance including the data handling capacity and filtering concepts. The indications and contraindications in the use of psychostimulants are presented. F.O.S.

MENTAL DYNAMICS
F. H. Harlow Jul. 1979 22 p
(Contract W-7405-eng-36)
(LA-7946-MS) Avail: NTIS HC A02/MF A01

The nonphysical life activity within an organism is described mathematically by means of a basic formulation to which numerous variations and embellishments are appended as required. The fundamental principle of overall activity normalization is presented and discussed in terms of its practical and philosophical consequences. Discrimination is introduced as a necessary complement to intelligence and creativity in the structure of genius. Future directions for development are described in terms of both deterministic and stochastic analysis for the organism as an isolated unit, as a member of society, and as an interacting element of the natural universe. SOME HUMAN FACTORS ISSUES IN THE DEVELOPMENT AND EVALUATION OF COCKPIT ALERTING AND WARNING SYSTEMS

Robert J. Randle, Jr., William E. Larsen, and Douglas H. Williams Washington Jan. 1980 65 p refs
(NASA-RP-1055; A-7696) Avail: NTIS HC A04/MF A01 CSCL 05H

A set of general guidelines for evaluating a newly developed cockpit alerting and warning system in terms of human factors issues are provided. Although the discussion centers around a general methodology, it is made specifically to the issues involved in alerting systems. An overall statement of the current operational problem is presented. Human factors problems with reference to existing alerting and warning systems are described. The methodology for proceeding through system development to system test is discussed. The differences between traditional human factors laboratory evaluations and those required for evaluation of complex man-machine systems under development are emphasized. Performance evaluation in the alerting and warning subsystem using a hypothetical sample system is explained. R.C.T.

MAN-MACHINE COMMUNICATION IN COMPUTER-AIDED REMOTE MANIPULATION Progress Report, 2 Feb. 1978 - 1 Feb. 1979
William H. Crooks, Efraim Shaket, Yee-Yeen Chu, and Yoram Alperovitch Mar. 1979 167 p refs
(Contract N00014-76-C-0603)
(AD-A074566; PATR-1034-79-3) Avail: NTIS HC A08/MF A01 CSCL 05/8

Automated Remote Manipulation is a prime example of a new type of man-machine interaction in which the human operator must supervise and control a complex and often adaptive man-computer system. Computerized control offers the possibilities of improved performance times and reduced operator workloads with teleoperator systems. Computers can be used at various levels of control, ranging from control augmentation, where the computer performs difficult coordinate transformations which simplify operator control requirements, through complete autonomy in which the computer performs all of the required activities with no intervention by the operator. However, with the introduction of computer-based control techniques, the communication between the operator and the teleoperator becomes an important determinant of work system performance. Rather than controlling directly every action of the manipulator, the operator of a computer-controlled manipulator plans the tasks, commands goal-directed actions, monitors task performance, and intervenes when appropriate. This report describes an analytical and experimental study to investigate the effectiveness of command language structures and the methods for providing feedback information through the use of sensors and displays. MVMA Two-Dimensional Crash Victim Simulation, version 4, volume 3
[PB-299307/9] N80-14727

ACETYL COMPOUNDS
The effect of locally applied organophosphates on miosis and acetylcholinesterase adaptation to chronic treatment
N80-14731

ACOUSTIC IMPEDANCE
Static acoustic impedance profiles in auditory diagnosis
[ASME PAPER 79-WA/BIO-1] A80-18643

ACTIVATED SLUDGE
Health effects of aerosols emitted from an activated sludge plant
[PB-299583/5] N80-14696

ACTIVATION (BIOLOGY)
Effect of hypogravity on human lymphocyte activation
A80-20446

ADAPTATION
Rat reaction to hypokinesia after prior adaptation to hypoxia
[NASA-TM-75964] N80-15782

AEROSOLS
Health effects of aerosols emitted from an activated sludge plant
[PB-299583/5] N80-14696

AEROSPACE ENVIRONMENTS
The course of experimental staphylococcus infection in albino mice during action of certain factors of space flight
[NASA-TM-75973] N80-15779

AEROSPACE MEDICINE
Scientific biomedical studies during the flight of the first Bulgarian cosmonaut
A80-19100
Space motion sickness
A80-20018
Exercise response to simulated weightlessness
A80-20019
A study of metabolic balance in crewmembers of Skylab IV
A80-20021
Amino aciduria in weightlessness
A80-20022
Fluid volumes changes induced by spaceflight
A80-20023
A sudden-stop vestibulovisual test for rapid assessment of motion sickness manifestations
A80-20444
Motion sickness. I - A theory. II - A clinical study based on surgery of cerebral hemisphere lesions. III - A clinical study based on surgery of posterior fossa tumors
A80-20452
Perspectives of the utilization of hyperbaric oxygenation in aviation medicine
A80-20500
Steady magnetic fields in noninvasive electromagnetic flowmetry
A80-21033
The effect of certain extremal factors on the human auditory function
A80-21038
The effect of aircraft noise on the functional state of human operators
A80-21039
The effect of age and vitamin provision of pilots on their night vision characteristics
A80-21040
Biology and medicine in space: Research opportunities offered by Spacelab. An invitation to European investigators
[ESA-BR-01] N80-14677
Recent advances in Aeronautical and Space Medicine
[AGARD-CP-265] N80-14678
Problems related to medical criteria for the selection of military navigation personnel
N80-14679
An advanced oxygen system for future combat aircraft
N80-14680

The European approach to the selection and training of SL payload specialists
N80-14681

Physiological factors in space operations. Emphasis on space shuttle
N80-14682

Supersonic aerial transport: Medical and physiological aspects --- Concorde aircraft
N80-14683

Maintenance of air operations while under attack with chemical agents --- protective clothing
[AGARD-CP-264-SUPPL] N80-14728

Consideration of pyridostigmine as a prophylactic agent for aircrew
N80-14730

Integration of protection against chemical warfare agents with aircrew personal equipment
N80-14738

The course of experimental staphylococcus infection in albino mice during action of certain factors of space flight
[NASA-TM-75973] N80-15779

Results of medical studies during long-term manned flights on the orbital Salyut-6 and Soyuz complex
[NASA-TM-76014] N80-15797

AEROSPACE TECHNOLOGY TRANSFER

Technologies for the handicapped and the aged
[NASA-TM-80842] N80-14715

AFFERENT NERVOUS SYSTEMS

Deiters-nucleus potentials evoked by stimulation of the neural elements of bones and musculo-cutaneous nerves in animals with the cerebrum and cerebellum removed
A80-20682

AGE FACTOR

The effect of age and vitamin provision of pilots on their night vision characteristics
A80-21040

AGING (BIOLOGY)

Review of cell aging in Drosophila and mouse
A80-17741

AGRICULTURAL AIRCRAFT

Heat stress exposure of aerial spray pilots
A80-20451

AIR QUALITY

Contaminants --- physiological effects of spacecraft contaminants
N80-15790

AIR TRAFFIC CONTROLLERS (PERSONNEL)

An exploratory study of psychophysiological measurements as indicators of air traffic control sector workload
N80-14755

Individual and system performance indices for the air traffic control system
N80-14756

Workload and stress in air traffic controllers
N80-14757

AIR TRANSPORTATION

Circadian rhythms in air operations
N80-15816

AIRCRAFT ACCIDENTS

Some human factors issues in the development and evaluation of cockpit alerting and warning systems
[NASA-RP-1055] N80-15821

AIRCRAFT INSTRUMENTS

Preliminary investigation of pilot scanning techniques of dial pointing instruments
[NASA-TM-80079] N80-14697

AIRCRAFT LANDING

When day is done and shadows fall, we miss the airport most of all --- visual accommodation and aircraft flight safety
A80-19024

AIRCRAFT NOISE

The effect of aircraft noise on the functional state of human operators
A80-21039

AIRCRAFT PERFORMANCE

Handling qualities, workload and heart rate
N80-14750

AIRCRAFT PILOTS

The effect of age and vitamin provision of pilots on their night vision characteristics
A80-21040

Problems related to medical criteria for the selection of military navigation personnel
N80-14679

Concerning individual equipment for fighter pilots in the Air Force
N80-14735

AIRPORTS

Approaches to CW agent area detection systems for airfields
N80-14733

ALERTNESS

Vigilance and attention
N80-15811

ALGAE

Comparison of diurnal fluctuations of dissolved inorganic carbon and algal productivity estimates in an oligotrophic and mesotrophic freshwater environment
[PB-301201/0] N80-15785

ALPHANUMERIC CHARACTERS

The effect of character size on the legibility of numeric displays during vertical whole-body vibration
A80-18839

AMINO ACIDS

Quantitative study of free amino acids in human eccrine sweat excreted from the forearms of healthy trained and untrained men during exercise
A80-17727

Amino aciduria in weightlessness
A80-20022

A mathematical model of the disruption of mirror symmetry in prebiological evolution
A80-20680

The informational structure of DNA, RNA, and amino acid sequences
A80-20856

ANEMIAS

Development of 'sports anemia' in physically fit men after daily sustained submaximal exercise
A80-20448

ANTHROPOMETRY

Anthropometric sizing, fit-testing and evaluation of the MBU-12/P oral-nasal oxygen mask
[AD-A074723] N80-14692

Design criteria for characterizing individuals in the extreme upper and lower body size ranges
[AD-A072353] N80-14721

ANTICHOLINERGICS

The effects of acute and chronic low dose exposure to anticholinesterases
N80-14729

Consideration of pyridostigmine as a prophylactic agent for aircrew
N80-14730

ANTIDOTES

Therapy on nerve agent poisoning
N80-14732

ANTISEPTICS

Waste stabilization lagoon microorganism removal efficiency and effluent disinfection with chlorine
[PB-300631/9] N80-15786

ARMED FORCES (FOREIGN)

Concerning individual equipment for fighter pilots in the Air Force
N80-14735

FRG aircrew chemical defence assemblies
N80-14737

ARMED FORCES (UNITED STATES)

Serum cholesterol levels in selected Air Force cadets compared with levels in the West Point study
A80-20442

Philosophy of protection of US aircrews against chemical warfare agents
N80-14734

US aircrew chemical defense assemblies
N80-14736

ARTERIES

The effects of hypodynamia and hypokinesia on the arterial bed of pelvic limb muscles in the rabbit
[NASA-TM-75984] N80-14673

ASTRONAUT PERFORMANCE

Psychophysiological monitoring of operator's emotional stress in aviation and astronautics
A80-20449

ATHLETES

Practical criteria for analyzing the heart hemodynamics of young athletes
A80-20212

ATTENTION
Vigilance and attention
N80-15811
AUDIOMETRY
Static acoustic impedance profiles in auditory diagnosis
[ASME PAPER 79-WA/BIO-1] A80-18643
AUDITORY PERCEPTION
The microwave auditory phenomenon
A80-21024
The effect of certain extremal factors on the human auditory function
A80-21038

B

BACKGROUND NOISE
A nonparametric model of detection of signals, observed by a human operator on a CRT screen in the presence of noise
A80-19452
BACTERIA
Proton movements in response to a light-driven electrogenic pump for sodium ions in Halobacterium halobium membranes
A80-17686
Investigation of effects of temperature, salinity, and electrode design on the performance of an electrochemical coliform detector
[NASA-TM-80130] N80-14676
Charge separation in synthetic photo-reaction centers
[CONF-781048-1] N80-15784
BED REST
Exercise response to simulated weightlessness
A80-20019
Joint Soviet-American experiment on hypokinesia: Experimental results
[NASA-TM-76013] N80-15796
BEHAVIOR
Influence of hypokinesis on physiological functions in fowl
[NASA-TM-75999] N80-15778
BIBLIOGRAPHIES
Biological effects of high-voltage electric fields, an update. Volume 2: Bibliography
[EPRI-EA-1123-VOL-2] N80-15801
BINOCULAR VISION
Nonlinear interactions in binocular vision
A80-20859
BINOCULARS
Daytime visual acuity of observers through a window with and without binoculars
[AD-A074722] N80-15800
BIOASSAY
Biological screening of complex samples from industrial/energy processes
[PB-300459/5] N80-15805
BIOASTRONAUTICS
Study of fungal phenotypes after exposure to space flight parameters
A80-17986
Space motion sickness
A80-20018
A mathematical and experimental simulation of the hematological response to weightlessness
A80-20020
A study of metabolic balance in crewmembers of Skylab IV
A80-20021
Amino aciduria in weightlessness
A80-20022
Fluid volumes changes induced by spaceflight
A80-20023
BIOCHEMISTRY
Proton movements in response to a light-driven electrogenic pump for sodium ions in Halobacterium halobium membranes
A80-17686
The interaction of ozone with the human erythrocyte --- biological effects of photochemical oxidants
N80-14686
Synthesis and biological screening by novel hybrid fluorocarbon hydrocarbon compounds for use as artificial blood substitutes
[NASA-CR-162537] N80-14689
Joint Soviet-American experiment on hypokinesia: Experimental results
[NASA-TM-76013] N80-15796
Biochemical indices of stress: Biochemical aspects of the stress response
N80-15812
Psychostimulants
N80-15817
BIOCONTROL SYSTEMS
Interpreting nonlinear systems - The third order kernel of the eye movement control system
A80-20860
BIODYNAMICS
Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, University of Pittsburgh, Pittsburgh, Pa., April 25-27, 1979. Part 1 - Biomedical
A80-20855
Measurement of resistive torques in major human joints

Model task for the dynamics of an underwater two-legged walker
[NASA-TM-75697] N80-15822
BIOELECTRICITY
Relationship among the 55 Hz bioelectric rhythm of the olfactory bulb, the bulb S-rhythm, and respiration
A80-20211
RF-field interactions with biological systems - Electrical properties and biophysical mechanisms
A80-21030
BIOENGINEERING
Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, University of Pittsburgh, Pittsburgh, Pa., April 25-27, 1979. Part 1 - Biomedical
A80-20855
A controlled rate freeze/thaw system for cryopreservation of biological materials
[NASA-CR-162531] N80-14675
Measurement of resistive torques in major human joints
[AD-A071170] N80-14695
Technologies for the handicapped and the aged
[NASA-TM-80842] N80-14715
BIOINSTRUMENTATION
Steady magnetic fields in noninvasive electromagnetic flowmetry
A80-21033
BIOLOGICAL EFFECTS
Hypergravity and estrogen effects on avian anterior pituitary growth hormone and prolactin levels
A80-20447
State of the knowledge for electromagnetic absorbed dose in man and animals
A80-21019
Microwave biological effects - An overview
A80-21021
Microwave cataractogenesis
A80-21022
Microwave irradiation and the blood-brain barrier
A80-21023
Soviet and Eastern European research on biological effects of microwave radiation
A80-21027
Biological effects of electric and magnetic fields associated with ELF communications systems
A80-21029
Frequency and power windowing in tissue interactions with weak electromagnetic fields
A80-21032
Physiological factors in space operations. Emphasis on space shuttle
N80-14682
The interaction of ozone with the human erythrocyte --- biological effects of photochemical oxidants
N80-14686
Biological effects of high-voltage electric fields, an update. Volume 2: Bibliography
[EPRI-EA-1123-VOL-2] N80-15801
BIOLOGICAL EVOLUTION
A mathematical model of the disruption of mirror symmetry in prebiological evolution
A80-20680
BIOMEDICAL DATA
Scientific biomedical studies during the flight of the first Bulgarian cosmonaut
A80-19100

Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, University of Pittsburgh, Pittsburgh, Pa., April 25-27, 1979. Part 1 - Biomedical
A80-20855
Study on the neuronal circuits implicated in postural tremor and hypokinesia
[NASA-TM-76008] N80-15783

BIONICS
Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, University of Pittsburgh, Pittsburgh, Pa., April 25-27, 1979. Part 1 - Biomedical
A80-20855
Nonlinear interactions in binocular vision
A80-20859
Interpreting nonlinear systems - The third order kernel of the eye movement control system
A80-20860
Modeling biodynamic effects of vibration, fifth year
[AD-A073819] N80-14719
Electromagnetic fields in biological media. Part 2: The SCAT program, multilayered sphere, theory and applications
[PB-300904/0] N80-15804

BIOPHYSICS
Spatial filtering and mechanisms of perception --- in human vision
A80-20858

BIOSYNTHESIS
Information processes in the evolution of protein synthesis
A80-20857
Synthesis and biological screening by novel hybrid fluorocarbon hydrocarbon compounds for use as artificial blood substitutes
[NASA-CR-162537] N80-14689

BIOTECHNOLOGY
Synthesis and biological screening by novel hybrid fluorocarbon hydrocarbon compounds for use as artificial blood substitutes
[NASA-CR-162537] N80-14689

BIVARIATE ANALYSIS
Confidence regions of planar cardiac vectors
A80-19850

BLOOD
Dialysis system --- using ion exchange resin membranes permeable to urea molecules
[NASA-CASE-NPO-14101-1] N80-14687
Synthesis and biological screening by novel hybrid fluorocarbon hydrocarbon compounds for use as artificial blood substitutes
[NASA-CR-162537] N80-14689
Activity of cholinesterases of blood and heart in rats of different sex and age during muscular loads and hypokinesia
[NASA-TM-75951] N80-15781

BLOOD CIRCULATION
Physiological regulation of oxygen transport to muscles /from results of mathematical analysis of experimental data/
A80-18081
Modeling of blood flow in vessels of the microcirculation
N80-14685

BLOOD FLOW
Steady magnetic fields in noninvasive electromagnetic flowmetry
A80-21033
Modeling of blood flow in vessels of the microcirculation
N80-14685
Effect of prolonged hypokinesia on tissue blood flow
[NASA-TM-76005] N80-14688

BLOOD VOLUME
Fluid volumes changes induced by spaceflight
A80-20023

BODY FLUIDS
Fluid volumes changes induced by spaceflight
A80-20023
Changes of some blood indices and myocardial electrolyte content during hypokinesia
[NASA-TM-75954] N80-15798

BODY SIZE (BIOLOGY)
Design criteria for characterizing individuals in the extreme upper and lower body size ranges
[AD-A072353] N80-14721

BODY TEMPERATURE
Body temperature and heart rate relationships during submaximal bicycle ergometer exercises
A80-17728
Temperature compensation of the metabolism of serotonin in the brain of hibernating mammals
A80-18082
Tolerance to shift work: A chronologic approach
N80-15815

BONES
Bone remodeling in centrifuged rats - Histomorphometric study after an 18-day run
A80-20450

BRAIN
Temperature compensation of the metabolism of serotonin in the brain of hibernating mammals
A80-18082
Effect of rhythmic photostimulation on monkeys with hyperkinesis of post-encephalitic genesis
[NASA-TM-75986] N80-14674
Brain waves and the enhancement of pilot performance
N80-14751

BRAIN CIRCULATION
Microwave irradiation and the blood-brain barrier
A80-21023

BRAIN DAMAGE
Motion sickness. I - A theory. II - A clinical study based on surgery of cerebral hemisphere lesions. III - A clinical study based on surgery of posterior fossa tumors
A80-20452

BREATHING APPARATUS
An advanced oxygen system for future combat aircraft
N80-14680

C

CABIN ATMOSPHERES
Philosophy of protection of US aircrews against chemical warfare agents
N80-14734
Atmosphere --- physiological basis for spacecraft pressure tolerance limits
N80-15789
Contaminants --- physiological effects of spacecraft contaminants
N80-15790

CALCIFEROL
Effect of 1 alpha-hydroxy-cholecalciferol and varying phosphorous content in the diet on calcium phosphorous metabolism in hypokinetic rats
A80-20445

CALCIUM METABOLISM
A study of metabolic balance in crewmembers of Skylab IV
A80-20021
Effect of 1 alpha-hydroxy-cholecalciferol and varying phosphorous content in the diet on calcium phosphorous metabolism in hypokinetic rats
A80-20445
Hormonal regulation of calcium and phosphorus homeostasis during physical activity
A80-20684
Mechanism of disorder of plastic processes in tissue during prolonged hypokinesia
[NASA-TM-75955] N80-15799

CAPILLARIES (ANATOMY)
Modeling of blood flow in vessels of the microcirculation
N80-14685

CARBAMATES (TRADENAME)
Consideration of pyridostigmine as a prophylactic agent for aircrew
N80-14730

CARBON
Comparison of diurnal fluctuations of dissolved inorganic carbon and algal productivity estimates in an oligotrophic and mesotrophic freshwater environment
[PB-301201/0] N80-15785

CARBON DIOXIDE REMOVAL
Regenerative CO2 removal for PLSS application
[NASA-CR-160419] N80-14718

CARDIAC VENTRICLES
Left ventricular relaxation and filling pattern in different forms of left ventricular hypertrophy - An echocardiographic study
A80-18975

CARDIOLOGY
Confidence regions of planer cardiac vectors
A80-19850
Practical criteria for analyzing the heart hemodynamics of young athletes
A80-20212

CARDIOVASCULAR SYSTEM
Joint Soviet-American experiment on hypokinesia: Experimental results
[NASA-TM-76013] N80-15796

CATARACTS
Microwave cataractogenesis
A80-21022

CELLS (BIOLOGY)
Review of cell aging in Drosophila and mouse
A80-17741
Study of fungal phenotypes after exposure to space flight parameters
A80-17986
Effect of hypoxia on the contractile activity of smooth muscle cells in the thoracic duct
A80-20683
Cellular effects: Millimeter waves and Raman spectra - Report of a panel discussion
A80-21031

CENTRIFUGING STRESS
Bone remodeling in centrifuged rats - Histomorphometric study after an 18-day run
A80-20450

CEREBRAL CORTEX
Visual cortical neurons - Are bars or gratings the optimal stimuli
A80-17711
Motion sickness. I - A theory. II - A clinical study based on surgery of cerebral hemisphere lesions. III - A clinical study based on surgery of posterior fossa tumors
A80-20452

CHEMICAL ENERGY
Energy uptake in the first step of visual excitation
A80-20387

CHEMICAL WARFARE
Maintenance of air operations while under attack with chemical agents --- protective clothing
[AGARD-CP-264-SUPPL] N80-14728
Consideration of pyridostigmine as a prophylactic agent for aircrew
N80-14730
Approaches to CW agent area detection systems for airfields
N80-14733
Philosophy of protection of US aircrews against chemical warfare agents
N80-14734
Concerning individual equipment for fighter pilots in the Air Force
N80-14735
US aircrew chemical defense assemblies
N80-14736
FRG aircrew chemical defence assemblies
N80-14737
Integration of protection against chemical warfare agents with aircrew personal equipment
N80-14738

CHLORINATION
Waste stabilization lagoon microorganism removal efficiency and effluent disinfection with chlorine
[PB-300631/9] N80-15786

CHLOROPHYLLS
Charge separation in synthetic photo-reaction centers
[CONF-781048-1] N80-15784

CHOLESTEROL
Serum cholesterol levels in selected Air Force cadets compared with levels in the West Point study
A80-20442

CHOLINERGICS
Therapy on nerve agent poisoning
N80-14732

CHOLINESTERASE
The effects of acute and chronic low dose exposure to anticholinesterases
N80-14729
The effect of locally applied organophosphates on miosis and acetylcholinesterase adaptation to chronic treatment
N80-14731
Therapy on nerve agent poisoning
N80-14732
Activity of cholinesterases of blood and heart in rats of different sex and age during muscular loads and hypokinesia
[NASA-TM-75951] N80-15781

CHRONOLOGY
Circadian and circannual rhythms in healthy adults
N80-15807

CIRCADIAN RHYTHMS
Sleep, Wakefulness and Circadian Rhythm
[AGARD-LS-105] N80-15806
Circadian and circannual rhythms in healthy adults
N80-15807
Circadian rhythms of human performance and resistance: Operational aspects
N80-15808
Sleep stage organization: Neuro endocrine relations
N80-15809
Tolerance to shift work: A chronologic approach
N80-15815
Circadian rhythms in air operations
N80-15816
Management of irregular rest and activity
N80-15819

CLOSED ECOLOGICAL SYSTEMS
Study of fungal phenotypes after exposure to space flight parameters
A80-17986
Biological systems for human life support: Review of the research in the USSR
[NASA-TM-76018] N80-14717

COCKPITS
Heat stress exposure of aerial spray pilots
A80-20451

COGNITIVE PSYCHOLOGY
Combined effects of broadband noise and complex waveform vibration on cognitive performance
A80-20441

COLD ACCLIMATIZATION
Temperature compensation of the metabolism of serotonin in the brain of hibernating mammals
A80-18082

COLD TOLERANCE
Thermal environment --- physiological basis for temperature tolerance limits
N80-15791

COLOR VISION
Theoretical problems in modeling color grating detection --- in human vision
A80-20861

COMBAT
Aircrew performance research opportunities using the Air Combat Maneuvering Range (ACMR)
N80-14753

COMPLEX SYSTEMS
Mathematical concepts for modeling human behavior in complex man-machine systems
A80-19025

COMPUTER GRAPHICS
Real-time simulation of FLIR and LLLTV Systems for aircrew training
A80-20899
Special session on vision
[LBL-9160] N80-15802

COMPUTER PROGRAMS
Modeling biodynamic effects of vibration, fifth year
[AD-A073819] N80-14719
Electromagnetic fields in biological media. Part 2: The SCAT program, multilayered sphere, theory and applications
[PB-300904/0] N80-15804

COMPUTERIZED SIMULATION
A mathematical and experimental simulation of the hematological response to weightlessness
A80-20020
Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, University of Pittsburgh, Pittsburgh, Pa., April 25-27, 1979. Part 1 - Biomedical
A80-20855
Time simulation of an air surveillance task with varying amounts of radar information
[AD-A074866] N80-14722
Motor Vehicle Manufacturers Association (MVMA) Two-Dimensional Crash Victim Simulation tutorial system: Self-study guide
[PB-299256/8] N80-14723

Motor Vehicle Manufacturers Association (MVMA) Two-Dimensional Crash Victim Simulation tutorial system: Audio-visual program
[PB-299257/6] N80-14724
MVMA Two-Dimensional Crash Victim Simulation, version 4, volume 1
[PB-299305/3] N80-14725
MVMA Two-Dimensional Crash Victim Simulation, version 4, volume 2
[PB-299306/1] N80-14726
MVMA Two-Dimensional Crash Victim Simulation, version 4, volume 3
[PB-299307/9] N80-14727

CONCORDE AIRCRAFT
Supersonic aerial transport: Medical and physiological aspects --- Concorde aircraft
N80-14683

CONFERENCES
Modeling and simulation. Volume 10 - Proceedings of the Tenth Annual Pittsburgh Conference, University of Pittsburgh, Pittsburgh, Pa., April 25-27, 1979. Part 1 - Biomedical
A80-20855

CONFIDENCE LIMITS
Confidence regions of planar cardiac vectors
A80-19850

CONGRESSIONAL REPORTS
Technologies for the handicapped and the aged
[NASA-TM-80842] N80-14715

CORRELATION
Assessment correlates of workload and performance
N80-14758

CRITERIA
Problems related to medical criteria for the selection of military navigation personnel
N80-14679

CRYOGENICS
A controlled rate freeze/thaw system for cryopreservation of biological materials
[NASA-CR-162531] N80-14675

CYTOLOGY
Proton movements in response to a light-driven electrogenic pump for sodium ions in Halobacterium halobium membranes
A80-17686

D

DECISION MAKING
Are important weights sensitive to the range of alternatives in multiattribute utility measurement
[AD-A073366] N80-14701

DECISION THEORY
Subjective versus statistical importance weights. A criterion validation
[AD-A073367] N80-14702

DEOXYRIBONUCLEIC ACID
The informational structure of DNA, RNA, and amino acid sequences
A80-20856
Information processes in the evolution of protein synthesis
A80-20857

DESIGN ANALYSIS
Investigation of effects of temperature, salinity, and electrode design on the performance of an electrochemical coliform detector
[NASA-TM-80130] N80-14676

DIAGNOSIS
Static acoustic impedance profiles in auditory diagnosis
[ASME PAPER 79-WA/BIO-1] A80-18643

DIALYSIS
Dialysis system --- using ion exchange resin membranes permeable to urea molecules
[NASA-CASE-NPO-14101-1] N80-14687

DIETS
Effect of 1 alpha-hydroxy-cholecalciferol and varying phosphorous content in the diet on calcium phosphorous metabolism in hypokinetic rats
A80-20445

DIFFERENTIATION (BIOLOGY)
Micromorphology of neurohypophysis of rats under experimental conditions
[NASA-TM-75947] N80-14671

DISEASES
Toxic polypeptides and uremia
[PB-301063/4] N80-15803

DISPLAY DEVICES
The effect of character size on the legibility of numeric displays during vertical whole-body vibration
A80-18839
Real-time simulation of FLIR and LLLTV Systems for aircrew training
A80-20899
Effect of peripherally presented visual signals on pilot performance during flight simulation
[AD-A073604] N80-14703

DIURNAL VARIATIONS
Comparison of diurnal fluctuations of dissolved inorganic carbon and algal productivity estimates in an oligotrophic and mesotrophic freshwater environment
[PB-301201/0] N80-15785

DOSIMETERS
Electromagnetic dosimetry for models of humans and animals - A review of theoretical and numerical techniques
A80-21020

DROSOPHILA
Review of cell aging in Drosophila and mouse
A80-17741

E

EARDRUMS
Eustachian tube function in selection of airmen
A80-20443

ECHOCARDIOGRAPHY
Left ventricular relaxation and filling pattern in different forms of left ventricular hypertrophy - An echocardiographic study
A80-18975

EDUCATION
The European approach to the selection and training of SL payload specialists
N80-14681

EFFERENT NERVOUS SYSTEMS
RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization
[NASA-TM-75983] N80-14672

EFFLUENTS
Biological screening of complex samples from industrial/energy processes
[PB-300459/5] N80-15805

ELECTRIC FIELDS
Biological effects of high-voltage electric fields, an update. Volume 2: Bibliography
[EPRI-EA-1123-VOL-2] N80-15801

ELECTRIC POWER TRANSMISSION
Biological effects of high-voltage electric fields, an update. Volume 2: Bibliography
[EPRI-EA-1123-VOL-2] N80-15801

ELECTRIC STIMULI
Evoked potentials in immobilized cats to a combination of clicks with painful electrocutaneous stimuli
[NASA-TM-75941] N80-15780

ELECTROCARDIOGRAPHY
Polycardiographic research with a single-channel electrocardiograph
A80-20213

ELECTROMAGNETIC ABSORPTION
State of the knowledge for electromagnetic absorbed dose in man and animals
A80-21019
Electromagnetic dosimetry for models of humans and animals - A review of theoretical and numerical techniques
A80-21020

ELECTROMAGNETIC FIELDS
Occupational exposure to radio-frequency electromagnetic fields
A80-21017
Electromagnetic fields in biological media. Part 2: The SCAT program, multilayered sphere, theory and applications
[PB-300904/0] N80-15804

ELECTROMAGNETIC MEASUREMENT
Steady magnetic fields in noninvasive electromagnetic flowmetry
A80-21033

ELECTROMAGNETIC RADIATION
Electromagnetic radiation from selected telecommunications systems
A80-21018
Biological effects of electric and magnetic fields associated with ELF communications systems
A80-21029
Frequency and power windowing in tissue interactions with weak electromagnetic fields
A80-21032
ELECTROPHYSIOLOGY
The microwave auditory phenomenon
A80-21024
Brain waves and the enhancement of pilot performance
N80-14751
EMOTIONAL FACTORS
Some considerations concerning methods to evaluate and assess workload in aircraft pilots
N80-14743
ENDOCRINE SECRETIONS
Advances in microwave-induced neuroendocrine effects - The concept of stress
A80-21025
ENDOCRINE SYSTEMS
Sleep stage organization: Neuro endocrine relations
N80-15809
ENERGY CONSUMPTION
Energy uptake in the first step of visual excitation
A80-20387
ENVIRONMENT EFFECTS
Sleep disturbances in humans
N80-15810
ENVIRONMENT PROTECTION
Biological screening of complex samples from industrial/energy processes
[PB-300459/5] N80-15805
ENVIRONMENTAL TESTS
Microbial colonization of materials at Innisfail, Queensland
[MRL-TN-428] N80-14670
ENZYME ACTIVITY
Therapy on nerve agent poisoning
N80-14732
EPIDEMIOLOGY
Epidemiologic studies of microwave effects
A80-21026
EQUATIONS OF MOTION
Kinematic analysis of osmotic processes under non-equilibrium conditions
N80-14669
ERGOMETERS
Body temperature and heart rate relationships during submaximal bicycle ergometer exercises
A80-17728
ERROR ANALYSIS
Validation and error in multiplicative utility functions
[AD-A073362] N80-14698
ERYTHROCYTES
A mathematical and experimental simulation of the hematological response to weightlessness
A80-20020
Development of 'sports anemia' in physically fit men after daily sustained submaximal exercise
A80-20448
A controlled rate freeze/thaw system for cryopreservation of biological materials
[NASA-CR-162531] N80-14675
The interaction of ozone with the human erythrocyte --- biological effects of photochemical oxidants
N80-14686
ESTROGENS
Hypergravity and estrogen effects on avian anterior pituitary growth hormone and prolactin levels
A80-20447
EUROPEAN SPACE PROGRAMS
Biology and medicine in space: Research opportunities offered by Spacelab. An invitation to European investigators
[ESA-BR-01] N80-14677
EUSTACHIAN TUBES
Eustachian tube function in selection of airmen
A80-20443
EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Deiters-nucleus potentials evoked by stimulation of the neural elements of bones and musculo-cutaneous nerves in animals with the cerebrum and cerebellum removed
A80-20682
Evoked potentials in immobilized cats to a combination of clicks with painful electrocutaneous stimuli
[NASA-TM-75941] N80-15780
EXCRETION
Amino aciduria in weightlessness
A80-20022
EXOBIOLOGY
Recent advances in Aeronautical and Space Medicine
[AGARD-CP-265] N80-14678
Simulation of physiological systems in order to evaluate and predict the human condition in a space flight
[NASA-TM-76016] N80-14716
Biological systems for human life support: Review of the research in the USSR
[NASA-TM-76018] N80-14717
EXPOSURE
Maintenance of air operations while under attack with chemical agents --- protective clothing
[AGARD-CP-264-SUPPL] N80-14728
The effects of acute and chronic low dose exposure to anticholinesterases
N80-14729
The effect of locally applied organophosphates on miosis and acetylcholinesterase adaptation to chronic treatment
N80-14731
EXTRAVEHICULAR ACTIVITY
Regenerative CO2 removal for PLSS application
[NASA-CR-160419] N80-14718
EXTREMELY LOW RADIO FREQUENCIES
Biological effects of electric and magnetic fields associated with ELF communications systems
A80-21029
EYE (ANATOMY)
Special session on vision
[LBL-9160] N80-15802
EYE MOVEMENTS
Interpreting nonlinear systems - The third order kernel of the eye movement control system
A80-20860
The effect of certain extremal factors on the human auditory function
A80-21038

F

FATIGUE (BIOLOGY)
Evaluation of human strain during interrupted exposure to vibration
A80-17726
Sleep disturbance and performance
N80-15814
FEMALES
A consideration of factors contributing to strength differences in men and women
[AD-A072671] N80-14694
FIGHTER AIRCRAFT
An advanced oxygen system for future combat aircraft
N80-14680
FLIGHT CLOTHING
Concerning individual equipment for fighter pilots in the Air Force
N80-14735
US aircrew chemical defense assemblies
N80-14736
FRG aircrew chemical defence assemblies
N80-14737
Integration of protection against chemical warfare agents with aircrew personal equipment
N80-14738
FLIGHT CREWS
Sleep and body rhythm disturbance in long-range aviation. The problem and a search for relief
N80-14714
Consideration of pyridostigmine as a prophylactic agent for aircrew
N80-14730
Philosophy of protection of US aircrews against chemical warfare agents
N80-14734

Aircrew workload assessment techniques --- human factors engineering study of performance of flight crews workloads
N80-14746
Aircrew performance research opportunities using the Air Combat Maneuvering Range (ACMR)
N80-14753
Speech patterns and aircrew workload
N80-14754
Management of irregular rest and activity
N80-15819

FLIGHT FATIGUE
Survey of methods to assess workload
[AGARD-AG-246] N80-14739
Concepts of fatigue --- survey of studies on pilot performance and flight fatigue discussed in terms of physiological and psychological stress
N80-14741
Concepts of stress
N80-14742
Physiologic aspects of workload/fatigue/stress
N80-14744
Some insights relative to the man-machine system: An overview of ten years of research
N80-14745

FLIGHT FITNESS
Recent advances in Aeronautical and Space Medicine
[AGARD-CP-265] N80-14678
Problems related to medical criteria for the selection of military navigation personnel
N80-14679
The European approach to the selection and training of SL payload specialists
N80-14681

FLIGHT OPERATIONS
Some considerations concerning methods to evaluate and assess workload in aircraft pilots
N80-14743
Workload assessment methodology development
N80-14747

FLIGHT SAFETY
When day is done and shadows fall, we miss the airport most of all --- visual accommodation and aircraft flight safety
A80-19024

FLIGHT SIMULATION
A new engineering approach to motion cueing technology --- for flight simulation
[AIAA PAPER 80-0047] A80-18250

FLIGHT SIMULATORS
Proficiency maintenance and assessment in an instrument flight simulator
A80-19023
Real-time simulation of FLIR and LLLTV Systems for aircrew training
A80-20899

FLIGHT STRESS (BIOLOGY)
Supersonic aerial transport: Medical and physiological aspects --- Concorde aircraft
N80-14683
Survey of methods to assess workload
[AGARD-AG-246] N80-14739
Concepts of stress
N80-14742
Some considerations concerning methods to evaluate and assess workload in aircraft pilots
N80-14743
Physiologic aspects of workload/fatigue/stress
N80-14744
Biochemical indices of stress: Biochemical aspects of the stress response
N80-15812

FLIGHT TRAINING
Proficiency maintenance and assessment in an instrument flight simulator
A80-19023

FLIR DETECTORS
Real-time simulation of FLIR and LLLTV Systems for aircrew training
A80-20899

FLOWMETERS
Steady magnetic fields in noninvasive electromagnetic flowmetry
A80-21033

FLUOROCARBONS
Synthesis and biological screening by novel hybrid fluorocarbon hydrocarbon compounds for use as artificial blood substitutes
[NASA-CR-162537] N80-14689

FLYING PERSONNEL
Problems related to medical criteria for the selection of military navigation personnel
N80-14679

FOREARM
Quantitative study of free amino acids in human eccrine sweat excreted from the forearms of healthy trained and untrained men during exercise
A80-17727

FOURIER TRANSFORMATION
Spatial filtering and mechanisms of perception --- in human vision
A80-20858

FREQUENCY RESPONSE
Static acoustic impedance profiles in auditory diagnosis
[ASME PAPER 79-WA/BIO-1] A80-18643

FUNGI
Study of fungal phenotypes after exposure to space flight parameters
A80-17986

G

GAS DETECTORS
Approaches to CW agent area detection systems for airfields
N80-14733

GENETIC CODE
The informational structure of DNA, RNA, and amino acid sequences
A80-20856
Information processes in the evolution of protein synthesis
A80-20857

GERMANY
FRG aircrew chemical defence assemblies
N80-14737

GLAUCOMA
Intra-ocular pressure normalization technique and equipment
[NASA-CASE-LEW-12955-1] N80-14684

GRAVITATIONAL EFFECTS
Effect of hypogravity on human lymphocyte activation
A80-20446
Hypergravity and estrogen effects on avian anterior pituitary growth hormone and prolactin levels
A80-20447

GROUP DYNAMICS
A criterion validation of multiattribute utility analysis and of a group communication strategy
[AD-A073364] N80-14699
Extended analysis of small group performance and the effects of contingency management in a programmed environment
[AD-A068665] N80-14705

GROWTH
Hypergravity and estrogen effects on avian anterior pituitary growth hormone and prolactin levels
A80-20447
Microbial colonization of materials at Innisfail, Queensland
[MRL-TN-428] N80-14670

H

HEALTH PHYSICS
Electromagnetic dosimetry for models of humans and animals - A review of theoretical and numerical techniques
A80-21020
Microwave biological effects - An overview
A80-21021
Microwave cataractogenesis
A80-21022
Soviet and Eastern European research on biological effects of microwave radiation
A80-21027
Study of effects of long-term low-level rf exposure on rats - A plan
A80-21028
Cellular effects: Millimeter waves and Raman spectra - Report of a panel discussion
A80-21031

HEARING
Derivation of presbycusis and Noise Induced Permanent Threshold Shift (NIPTS) to be used for the basis of a standard on the effects of noise on hearing
[AD-A071310] N80-14690

HEART
Activity of cholinesterases of blood and heart in rats of different sex and age during muscular loads and hypokinesia
[NASA-TM-75951] N80-15781

HEART DISEASES
Left ventricular relaxation and filling pattern in different forms of left ventricular hypertrophy - An echocardiographic study
A80-18975

HEART RATE
Body temperature and heart rate relationships during submaximal bicycle ergometer exercises
A80-17728
Handling qualities, workload and heart rate
N80-14750

HEAT MEASUREMENT
Energy uptake in the first step of visual excitation
A80-20387

HEAT TOLERANCE
Three instruments for assessment of WBGT and a comparison with WGT (BOTSBALL)
[AD-A074979] N80-14691
Thermal environment --- physiological basis for temperature tolerance limits
N80-15791

HEMATOCRIT RATIO
Development of 'sports anemia' in physically fit men after daily sustained submaximal exercise
A80-20448

HEMATOLOGY
A mathematical and experimental simulation of the hematological response to weightlessness
A80-20020
The interaction of ozone with the human erythrocyte --- biological effects of photochemical oxidants
N80-14686

HEMODYNAMIC RESPONSES
A mathematical and experimental simulation of the hematological response to weightlessness
A80-20020

HEMODYNAMICS
Practical criteria for analyzing the heart hemodynamics of young athletes
A80-20212
Effect of prolonged hypokinesia on tissue blood flow
[NASA-TM-76005] N80-14688
Changes of some blood indices and myocardial electrolyte content during hypokinesia
[NASA-TM-75954] N80-15798

HEMOGLOBIN
Development of 'sports anemia' in physically fit men after daily sustained submaximal exercise
A80-20448

HIBERNATION
Temperature compensation of the metabolism of serotonin in the brain of hibernating mammals
A80-18082

HIGH GRAVITY ENVIRONMENTS
Hypergravity and estrogen effects on avian anterior pituitary growth hormone and prolactin levels
A80-20447

HISTOLOGY
Bone remodeling in centrifuged rats - Histomorphometric study after an 18-day run
A80-20450

HOMEOSTASIS
Hormonal regulation of calcium and phosphorus homeostasis during physical activity
A80-20684

HORMONE METABOLISMS
Hormonal regulation of calcium and phosphorus homeostasis during physical activity
A80-20684

HORMONES
Biochemical indices of stress: Biochemical aspects of the stress response
N80-15812

HUMAN BEHAVIOR
Mathematical concepts for modeling human behavior in complex man-machine systems
A80-19025
A study in procedural manipulation of locus of control
[AD-A068658] N80-14704
Rule learning and systematic instruction in pilot training
[AD-A068906] N80-14709
Rating errors of inconsistency as a function of dimensionality of behavioral anchors
[AD-A068922] N80-14710
A mind/brain/matter model consistent with quantum physics and UFO phenomena
[AD-A068988] N80-14711

HUMAN BEINGS
State of the knowledge for electromagnetic absorbed dose in man and animals
A80-21019
Circadian and circannual rhythms in healthy adults
N80-15807

HUMAN BODY
Quantitative study of free amino acids in human eccrine sweat excreted from the forearms of healthy trained and untrained men during exercise
A80-17727
The interaction of ozone with the human erythrocyte --- biological effects of photochemical oxidants
N80-14686
Design criteria for characterizing individuals in the extreme upper and lower body size ranges
[AD-A072353] N80-14721

HUMAN FACTORS ENGINEERING
The effect of character size on the legibility of numeric displays during vertical whole-body vibration
A80-18839
When day is done and shadows fall, we miss the airport most of all --- visual accommodation and aircraft flight safety
A80-19024
Mathematical concepts for modeling human behavior in complex man-machine systems
A80-19025
Three instruments for assessment of WBGT and a comparison with WGT (BOTSBALL)
[AD-A074979] N80-14691
Anthropometric sizing, fit-testing and evaluation of the MBU-12/P oral-nasal oxygen mask
[AD-A074723] N80-14692
Importance weight assessment for additive, riskless preference functions: A review
[AD-A073365] N80-14700
Effect of peripherally presented visual signals on pilot performance during flight simulation
[AD-A073604] N80-14703
Extended analysis of small group performance and the effects of contingency management in a programmed environment
[AD-A068665] N80-14705
Ability, involvement and climate as multiple and interactive predictors of performance
[AD-A068891] N80-14706
Methodological and conceptual issues in understanding ability-performance relationships
[AD-A068894] N80-14708
Rule learning and systematic instruction in pilot training
[AD-A068906] N80-14709
Technologies for the handicapped and the aged
[NASA-TM-80842] N80-14715
Methods for evaluating the physical and effort requirements of Navy tasks: Metabolic, performance, and physical ability correlates of perceived effort
[AD-A072497] N80-14720
FRG aircrew chemical defence assemblies
N80-14737
Integration of protection against chemical warfare agents with aircrew personal equipment
N80-14738
Aircrew workload assessment techniques --- human factors engineering study of performance of flight crews workloads
N80-14746
Quantitative military workload analysis
N80-14748
Visual performance: A method to assess workload in the flight environment
N80-14749
Handling qualities, workload and heart rate
N80-14750

Daytime visual acuity of observers through a window with and without binoculars [AD-A074722] N80-15800
Some human factors issues in the development and evaluation of cockpit alerting and warning systems [NASA-RP-1055] N80-15821

HUMAN PERFORMANCE
The effect of certain extremal factors on the human auditory function A80-21038
The effect of aircraft noise on the functional state of human operators A80-21039
Extended analysis of small group performance and the effects of contingency management in a programmed environment [AD-A068665] N80-14705
Ability, involvement and climate as multiple and interactive predictors of performance [AD-A068891] N80-14706
Work performance as a function of the interaction of ability, work values, and the perceived work environment [AD-A068893] N80-14707
Methodological and conceptual issues in understanding ability-performance relationships [AD-A068894] N80-14708
Rating errors of inconsistency as a function of dimensionality of behavioral anchors [AD-A068922] N80-14710
Sleep and body rhythm disturbance in long-range aviation. The problem and a search for relief N80-14714
Methods for evaluating the physical and effort requirements of Navy tasks: Metabolic, performance, and physical ability correlates of perceived effort [AD-A072497] N80-14720
Individual and system performance indices for the air traffic control system N80-14756
Assessment correlates of workload and performance N80-14758
Circadian rhythms of human performance and resistance: Operational aspects N80-15808
Sleep disturbance and performance N80-15814
Circadian rhythms in air operations N80-15816
Hypnotics and the management of disturbed sleep N80-15818

HUMAN REACTIONS
Biological rhythms of man living in isolation from time cues N80-15813

HUMAN TOLERANCES
The physiological basis for spacecraft environmental limits [NASA-RP-1045] N80-15788
Atmosphere --- physiological basis for spacecraft pressure tolerance limits N80-15789
Sound and noise --- in spacecraft N80-15793
Radiofrequency radiation --- spacecraft environmental limits N80-15794

HYDROCARBONS
Synthesis and biological screening by novel hybrid fluorocarbon hydrocarbon compounds for use as artificial blood substitutes [NASA-CR-162537] N80-14689

HYPERBARIC CHAMBERS
Perspectives of the utilization of hyperbaric oxygenation in aviation medicine A80-20500

HYPODYNAMIA
RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization [NASA-TM-75983] N80-14672
The effects of hypodynamia and hypokinesia on the arterial bed of pelvic limb muscles in the rabbit [NASA-TM-75984] N80-14673

HYPOKINESIA
Effect of 1 alpha-hydroxy-cholecalciferol and varying phosphorous content in the diet on calcium phosphorous metabolism in hypokinetic rats A80-20445
The effect of certain extremal factors on the human auditory function A80-21038
The effects of hypodynamia and hypokinesia on the arterial bed of pelvic limb muscles in the rabbit [NASA-TM-75984] N80-14673
Effect of prolonged hypokinesia on tissue blood flow [NASA-TM-76005] N80-14688
Influence of hypokinesis on physiological functions in fowl [NASA-TM-75999] N80-15778
Rat reaction to hypokinesia after prior adaptation to hypoxia [NASA-TM-75964] N80-15782
Study on the neuronal circuits implicated in postural tremor and hypokinesia [NASA-TM-76004] N80-15783
Joint Soviet-American experiment on hypokinesia: Experimental results [NASA-TM-76013] N80-15796
Changes of some blood indices and myocardial electrolyte content during hypokinesia [NASA-TM-75954] N80-15798
Mechanism of disorder of plastic processes in tissue during prolonged hypokinesia [NASA-TM-75955] N80-15799

HYPOXIA
Effect of hypoxia on the contractile activity of smooth muscle cells in the thoracic duct A80-20683
Rat reaction to hypokinesia after prior adaptation to hypoxia [NASA-TM-75964] N80-15782

HYSTERESIS
Nonlinear interactions in binocular vision A80-20859

I

IMAGE CONTRAST
Theoretical problems in modeling color grating detection --- in human vision A80-20861

IMMUNOLOGY
The course of experimental staphylococcus infection in albino mice during action of certain factors of space flight [NASA-TM-75973] N80-15779

IMPACT RESISTANCE
Physical forces generating acceleration, vibration, and impact --- physiological effects N80-15792

INDICATING INSTRUMENTS
Preliminary investigation of pilot scanning techniques of dial pointing instruments [NASA-TM-80079] N80-14697

INDUSTRIAL SAFETY
Occupational exposure to radio-frequency electromagnetic fields A80-21017

INFECTIOUS DISEASES
The course of experimental staphylococcus infection in albino mice during action of certain factors of space flight [NASA-TM-75973] N80-15779

INFERENCE
Subjective versus statistical importance weights. A criterion validation [AD-A073367] N80-14702

INSOMNIA
Sleep disturbances in humans N80-15810

INTRAOCULAR PRESSURE
Intra-ocular pressure normalization technique and equipment [NASA-CASE-LEW-12955-1] N80-14684

ION EXCHANGE RESINS
Dialysis system --- using ion exchange resin membranes permeable to urea molecules [NASA-CASE-NPO-14101-1] N80-14687

- **ION PUMPS**
  - Proton movements in response to a light-driven electrogenic pump for sodium ions in Halobacterium halobium membranes A80-17686
- **ION SELECTIVE ELECTRODES**
  - Investigation of effects of temperature, salinity, and electrode design on the performance of an electrochemical coliform detector [NASA-TM-80130] N80-14676
- **IONIZING RADIATION**
  - Early transient incapacitation: A review with consideration of underlying mechanisms [AD-A071803] N80-14693
- **ISOMERS**
  - A mathematical model of the disruption of mirror symmetry in prebiological evolution A80-20680

J

- **JOINTS (JUNCTIONS)**
  - Measurement of resistive torques in major human joints [AD-A071170] N80-14695
- **JUDGMENTS**
  - Validation and error in multiplicative utility functions [AD-A073362] N80-14698
  - Importance weight assessment for additive, riskless preference functions: A review [AD-A073365] N80-14700
  - Are important weights sensitive to the range of alternatives in multiattribute utility measurement [AD-A073366] N80-14701
  - Subjective versus statistical importance weights. A criterion validation [AD-A073367] N80-14702

K

- **KERNEL FUNCTIONS**
  - Interpreting nonlinear systems - The third order kernel of the eye movement control system A80-20860

L

- **LAGOONS**
  - Waste stabilization lagoon microorganism removal efficiency and effluent disinfection with chlorine [PB-300631/9] N80-15786
- **LEARNING**
  - Rule learning and systematic instruction in pilot training [AD-A068906] N80-14709
- **LEGIBILITY**
  - The effect of character size on the legibility of numeric displays during vertical whole-body vibration A80-18839
- **LIFE SUPPORT SYSTEMS**
  - Anthropometric sizing, fit-testing and evaluation of the MBU-12/P oral-nasal oxygen mask [AD-A074723] N80-14692
  - Biological systems for human life support: Review of the research in the USSR [NASA-TM-76018] N80-14717
  - US aircrew chemical defense assemblies N80-14736
- **LIPOPROTEINS**
  - Serum cholesterol levels in selected Air Force cadets compared with levels in the West Point study A80-20442
- **LOGIC**
  - A mind/brain/matter model consistent with quantum physics and UFO phenomena [AD-A068988] N80-14711
- **LYMPH**
  - Effect of hypoxia on the contractile activity of smooth muscle cells in the thoracic duct A80-20683
- **LYMPHOCYTES**
  - Effect of hypogravity on human lymphocyte activation A80-20446

M

- **MAGNETIC FIELDS**
  - Steady magnetic fields in noninvasive electromagnetic flowmetry A80-21033
- **MALES**
  - A consideration of factors contributing to strength differences in men and women [AD-A072671] N80-14694
- **MAN MACHINE SYSTEMS**
  - A new engineering approach to motion cueing technology --- for flight simulation [AIAA PAPER 80-0047] A80-18250
  - Mathematical concepts for modeling human behavior in complex man-machine systems A80-19025
  - A nonparametric model of detection of signals, observed by a human operator on a CRT screen in the presence of noise A80-19452
  - Sleep and body rhythm disturbance in long-range aviation. The problem and a search for relief N80-14714
  - Technologies for the handicapped and the aged [NASA-TM-80842] N80-14715
  - Time simulation of an air surveillance task with varying amounts of radar information [AD-A074866] N80-14722
  - Some insights relative to the man-machine system: An overview of ten years of research N80-14745

Interpreting nonlinear systems - The third order kernel of the eye movement control system
A80-20860

NUMERICAL ANALYSIS

Electromagnetic dosimetry for models of humans and animals - A review of theoretical and numerical techniques
A80-21020

O

OLFACTORY PERCEPTION

Relationship among the 55 Hz bioelectric rhythm of the olfactory bulb, the bulb S-rhythm, and respiration
A80-20211

OPERATOR PERFORMANCE

A nonparametric model of detection of signals, observed by a human operator on a CRT screen in the presence of noise
A80-19452

The effect of antiorthostatic stimuli on human operators studied using rheography data
A80-20082

Combined effects of broadband noise and complex waveform vibration on cognitive performance
A80-20441

Psychophysiological monitoring of operator's emotional stress in aviation and astronautics
A80-20449

Process model of how the human operator tracks discontinuous inputs
[AD-A069001] N80-14712

ORGANIC MATERIALS

Microbial colonization of materials at Innisfail, Queensland
[MRL-TN-428] N80-14670

ORGANIC PHOSPHORUS COMPOUNDS

The effect of locally applied organophosphates on miosis and acetylcholinesterase adaptation to chronic treatment
N80-14731

ORTHOSTATIC TOLERANCE

The effect of antiorthostatic stimuli on human operators studied using rheography data
A80-20082

OSMOSIS

Kinematic analysis of osmotic processes under non-equilibrium conditions
N80-14669

OSTEOPOROSIS

Bone remodeling in centrifuged rats - Histomorphometric study after an 18-day run
A80-20450

OTOLOGY

Static acoustic impedance profiles in auditory diagnosis
[ASME PAPER 79-WA/BIO-1] A80-18643

OXYGEN CONSUMPTION

Physiological regulation of oxygen transport to muscles /from results of mathematical analysis of experimental data/
A80-18081

OXYGEN MASKS

Anthropometric sizing, fit-testing and evaluation of the MBU-12/P oral-nasal oxygen mask
[AD-A074723] N80-14692

OXYGEN SUPPLY EQUIPMENT

An advanced oxygen system for future combat aircraft
N80-14680

OXYGENATION

Perspectives of the utilization of hyperbaric oxygenation in aviation medicine
A80-20500

OZONE

The interaction of ozone with the human erythrocyte --- biological effects of photochemical oxidants
N80-14686

P

PAIN

Evoked potentials in immobilized cats to a combination of clicks with painful electrocutaneous stimuli
[NASA-TM-75941] N80-15780

PERCEPTION

A mind/brain/matter model consistent with quantum physics and UFO phenomena
[AD-A068988] N80-14711

PERFORMANCE PREDICTION

Ability, involvement and climate as multiple and interactive predictors of performance
[AD-A068891] N80-14706

Work performance as a function of the interaction of ability, work values, and the perceived work environment
[AD-A068893] N80-14707

PERIPHERAL VISION

Effect of peripherally presented visual signals on pilot performance during flight simulation
[AD-A073604] N80-14703

PERMEABILITY

Dialysis system --- using ion exchange resin membranes permeable to urea molecules
[NASA-CASE-NPO-14101-1] N80-14687

PERSONNEL

Occupational exposure to radio-frequency electromagnetic fields
A80-21017

PERSONNEL SELECTION

Problems related to medical criteria for the selection of military navigation personnel
N80-14679

The European approach to the selection and training of SL payload specialists
N80-14681

PHOSPHORUS
Effect of 1 alpha-hydroxy-cholecalciferol and varying phosphorous content in the diet on calcium phosphorous metabolism in hypokinetic rats
A80-20445

PHOSPHORUS METABOLISM
Hormonal regulation of calcium and phosphorus homeostasis during physical activity
A80-20684

PHOTOABSORPTION
Energy uptake in the first step of visual excitation
A80-20387

PHOTOCHEMICAL OXIDANTS
The interaction of ozone with the human erythrocyte --- biological effects of photochemical oxidants
N80-14686

PHOTOCHEMICAL REACTIONS
Energy uptake in the first step of visual excitation
A80-20387

PHOTOSENSITIVITY
Visual cortical neurons - Are bars or gratings the optimal stimuli
A80-17711
Effect of rhythmic photostimulation on monkeys with hyperkinesis of post-encephalitic genesis
[NASA-TM-75986] N80-14674

PHOTOSYNTHESIS
Charge separation in synthetic photo-reaction centers
[CONF-781048-1] N80-15784

PHYSICAL EXAMINATIONS
Serum cholesterol levels in selected Air Force cadets compared with levels in the West Point study
A80-20442

PHYSICAL EXERCISE
Quantitative study of free amino acids in human eccrine sweat excreted from the forearms of healthy trained and untrained men during exercise
A80-17727
Body temperature and heart rate relationships during submaximal bicycle ergometer exercises
A80-17728
Exercise response to simulated weightlessness
A80-20019
Development of 'sports anemia' in physically fit men after daily sustained submaximal exercise
A80-20448

PHYSICAL FITNESS
Development of 'sports anemia' in physically fit men after daily sustained submaximal exercise
A80-20448
Methods for evaluating the physical and effort requirements of Navy tasks: Metabolic, performance, and physical ability correlates of perceived effort
[AD-A072497] N80-14720

PHYSIOLOGICAL EFFECTS
Combined effects of broadband noise and complex waveform vibration on cognitive performance
A80-20441
Eustachian tube function in selection of airmen
A80-20443
Effect of 1 alpha-hydroxy-cholecalciferol and varying phosphorous content in the diet on calcium phosphorous metabolism in hypokinetic rats
A80-20445
Effect of hypogravity on human lymphocyte activation
A80-20446
Bone remodeling in centrifuged rats - Histomorphometric study after an 18-day run
A80-20450
Heat stress exposure of aerial spray pilots
A80-20451
Microwave irradiation and the blood-brain barrier
A80-21023
Frequency and power windowing in tissue interactions with weak electromagnetic fields
A80-21032
The effect of aircraft noise on the functional state of human operators
A80-21039
The effects of hypodynamia and hypokinesia on the arterial bed of pelvic limb muscles in the rabbit
[NASA-TM-75984] N80-14673
Early transient incapacitation: A review with consideration of underlying mechanisms
[AD-A071803] N80-14693
The effects of acute and chronic low dose exposure to anticholinesterases

  Survey of methods to assess workload [AGARD-AG-246] N80-14739
  Concepts of workload --- study of work capacity and pilot performance in terms of physiological and psychological stress N80-14740
  Concepts of fatigue --- survey of studies on pilot performance and flight fatigue discussed in terms of physiological and psychological stress N80-14741
  Some considerations concerning methods to evaluate and assess workload in aircraft pilots N80-14743
  Some insights relative to the man-machine system: An overview of ten years of research N80-14745
  Aircrew workload assessment techniques --- human factors engineering study of performance of flight crews workloads N80-14746
  Workload assessment methodology development N80-14747
  Visual performance: A method to assess workload in the flight environment N80-14749
  Handling qualities, workload and heart rate N80-14750
  Brain waves and the enhancement of pilot performance N80-14751
  Pupillometric methods of workload evaluation: Present status and future possibilities --- pilot workload N80-14752
  Aircrew performance research opportunities using the Air Combat Maneuvering Range (ACMR) N80-14753
  Speech patterns and aircrew workload N80-14754
PILOT SELECTION
  Eustachian tube function in selection of airmen A80-20443
PILOT TRAINING
  Proficiency maintenance and assessment in an instrument flight simulator A80-19023
  When day is done and shadows fall, we miss the airport most of all --- visual accommodation and aircraft flight safety A80-19024
  Rule learning and systematic instruction in pilot training [AD-A068906] N80-14709
PILOTS (PERSONNEL)
  Preliminary investigation of pilot scanning techniques of dial pointing instruments [NASA-TM-80079] N80-14697
  Biochemical indices of stress: Biochemical aspects of the stress response N80-15812
PITUITARY GLAND
  Micromorphology of neurohypophysis of rats under experimental conditions [NASA-TM-75947] N80-14671
PITUITARY HORMONES
  Hypergravity and estrogen effects on avian anterior pituitary growth hormone and prolactin levels A80-20447
POLARIZATION (CHARGE SEPARATION)
  Charge separation in synthetic photo-reaction centers [CONF-781048-1] N80-15784
POLLUTION CONTROL
  Biological screening of complex samples from industrial/energy processes [PB-300459/5] N80-15805
POLLUTION MONITORING
  Investigation of effects of temperature, salinity, and electrode design on the performance of an electrochemical coliform detector [NASA-TM-80130] N80-14676
POLYPEPTIDES
  The informational structure of DNA, RNA, and amino acid sequences A80-20856
  Information processes in the evolution of protein synthesis A80-20857
  Toxic polypeptides and uremia [PB-301063/4] N80-15803
PORTABLE LIFE SUPPORT SYSTEMS
  Regenerative CO2 removal for PLSS application [NASA-CR-160419] N80-14718
PRESERVING
  A controlled rate freeze/thaw system for cryopreservation of biological materials [NASA-CR-162531] N80-14675
PRESSURE BREATHING
  An advanced oxygen system for future combat aircraft N80-14680
PRESSURE EFFECTS
  Eustachian tube function in selection of airmen A80-20443
PRESSURE REGULATORS
  Intra-ocular pressure normalization technique and equipment [NASA-CASE-LEW-12955-1] N80-14684
PRESSURIZED CABINS
  Atmosphere --- physiological basis for spacecraft pressure tolerance limits N80-15789
PRODUCTIVITY
  Comparison of diurnal fluctuations of dissolved inorganic carbon and algal productivity estimates in an oligotrophic and mesotrophic freshwater environment [PB-301201/0] N80-15785
PROPHYLAXIS
  Consideration of pyridostigmine as a prophylactic agent for aircrew N80-14730
PROTECTION
  Philosophy of protection of US aircrews against chemical warfare agents N80-14734
  Integration of protection against chemical warfare agents with aircrew personal equipment N80-14739
PROTECTIVE CLOTHING
  Maintenance of air operations while under attack with chemical agents --- protective clothing [AGARD-CP-264-SUPPL] N80-14728
  Concerning individual equipment for fighter pilots in the Air Force N80-14735
  US aircrew chemical defense assemblies N80-14736
  FRG aircrew chemical defence assemblies N80-14737
  Integration of protection against chemical warfare agents with aircrew personal equipment N80-14738
PROTEIN METABOLISM
  Mechanism of disorder of plastic processes in tissue during prolonged hypokinesia [NASA-TM-75955] N80-15799
PROTEINS
  Information processes in the evolution of protein synthesis A80-20857
PROTONS
  Proton movements in response to a light-driven electrogenic pump for sodium ions in Halobacterium halobium membranes A80-17686
PSYCHOLOGICAL EFFECTS
  The effect of aircraft noise on the functional state of human operators A80-21039

PSYCHOLOGY
A study in procedural manipulation of locus of control
[AD-A068658] N80-14704
PSYCHOMOTOR PERFORMANCE
Psychophysiological monitoring of operator's emotional stress in aviation and astronautics
A80-20449
Circadian rhythms of human performance and resistance: Operational aspects
N80-15808
PSYCHOPHYSICS
A mind/brain/matter model consistent with quantum physics and UFO phenomena
[AD-A068988] N80-14711
PSYCHOPHYSIOLOGY
An exploratory study of psychophysiological measurements as indicators of air traffic control sector workload
N80-14755
PUBLIC HEALTH
Health effects of aerosols emitted from an activated sludge plant
[PB-299583/5] N80-14696
PUPILLOMETRY
Pupillometric methods of workload evaluation: Present status and future possibilities --- pilot workload
N80-14752

Q

QUANTITATIVE ANALYSIS
Quantitative study of free amino acids in human eccrine sweat excreted from the forearms of healthy trained and untrained men during exercise
A80-17727

R

RADIANT FLUX DENSITY
Electromagnetic radiation from selected telecommunications systems

RF-field interactions with biological systems - Electrical properties and biophysical mechanisms
A80-21030
Cellular effects: Millimeter waves and Raman spectra - Report of a panel discussion
A80-21031
RAMAN SPECTRA
Cellular effects: Millimeter waves and Raman spectra - Report of a panel discussion
A80-21031
RANGE (EXTREMES)
Design criteria for characterizing individuals in the extreme upper and lower body size ranges
[AD-A072353] N80-14721
RANGES (FACILITIES)
Aircrew performance research opportunities using the Air Combat Maneuvering Range (ACMR)
N80-14753
RATINGS
Rating errors of inconsistency as a function of dimensionality of behavioral anchors
[AD-A068922] N80-14710
REAL TIME OPERATION
Real-time simulation of FLIR and LLLTV Systems for aircrew training
A80-20899
REBREATHING
Regenerative CO2 removal for PLSS application
[NASA-CR-160419] N80-14718
REDUCED GRAVITY
Effect of hypogravity on human lymphocyte activation
A80-20446

REMOTE CONTROL
Man-machine communication in computer-aided remote manipulation
[AD-A074566] N80-15823
Teleoperators under the sea
[PB-299883/9] N80-15824

RESPIRATORY PHYSIOLOGY
Relationship among the 55 Hz bioelectric rhythm of the olfactory bulb, the bulb S-rhythm, and respiration
A80-20211

RETINA
A facilitation effect in orientation discrimination
[AD-A072726] N80-14713

RETINAL ADAPTATION
Special session on vision
[LBL-9160] N80-15802

RHEOLOGY
The effect of antiorthostatic stimuli on human operators studied using rheography data
A80-20082

RHYTHM (BIOLOGY)
Relationship among the 55 Hz bioelectric rhythm of the olfactory bulb, the bulb S-rhythm, and respiration
A80-20211
Sleep and body rhythm disturbance in long-range aviation. The problem and a search for relief
N80-14714
Biological rhythms of man living in isolation from time cues
N80-15813

RIBONUCLEIC ACIDS
The informational structure of DNA, RNA, and amino acid sequences
A80-20856
Information processes in the evolution of protein synthesis
A80-20857
RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization
[NASA-TM-75983] N80-14672

S

SALYUT SPACE STATION
Scientific biomedical studies during the flight of the first Bulgarian cosmonaut
A80-19100
Results of medical studies during long-term manned flights on the orbital Salyut-6 and Soyuz complex
[NASA-TM-76014] N80-15797

SEDATIVES
Hypnotics and the management of disturbed sleep
N80-15818

SENSORY STIMULATION
Effect of rhythmic photostimulation on monkeys with hyperkinesis of post-encephalitic genesis
[NASA-TM-75986] N80-14674

SEROTONIN
Temperature compensation of the metabolism of serotonin in the brain of hibernating mammals
A80-18082

SERUMS
Serum cholesterol levels in selected Air Force cadets compared with levels in the West Point study
A80-20442

SEWAGE TREATMENT
Health effects of aerosols emitted from an activated sludge plant
[PB-299583/5] N80-14696
Waste stabilization lagoon microorganism removal efficiency and effluent disinfection with chlorine
[PB-300631/9] N80-15786

SIGNAL DETECTION
A nonparametric model of detection of signals, observed by a human operator on a CRT screen in the presence of noise
A80-19452

SIGNAL TO NOISE RATIOS
A nonparametric model of detection of signals, observed by a human operator on a CRT screen in the presence of noise
A80-19452

SITTING POSITION
Evaluation of human strain during interrupted exposure to vibration
A80-17726

SKIN TEMPERATURE (BIOLOGY)
Body temperature and heart rate relationships during submaximal bicycle ergometer exercises
A80-17728

SKYLAB 4
A study of metabolic balance in crewmembers of Skylab IV
A80-20021

SLEEP
Sleep, Wakefulness and Circadian Rhythm
[AGARD-LS-105] N80-15806
Sleep stage organization: Neuro endocrine relations
N80-15809
Biological rhythms of man living in isolation from time cues
N80-15813
Hypnotics and the management of disturbed sleep
N80-15818

SLEEP DEPRIVATION
Temperature compensation of the metabolism of serotonin in the brain of hibernating mammals
A80-18082
Sleep and body rhythm disturbance in long-range aviation. The problem and a search for relief
N80-14714
Sleep disturbances in humans
N80-15810
Sleep disturbance and performance
N80-15814

SODIUM
Proton movements in response to a light-driven electrogenic pump for sodium ions in Halobacterium halobium membranes
A80-17686

SOYUZ SPACECRAFT
Results of medical studies during long-term manned flights on the orbital Salyut-6 and Soyuz complex
[NASA-TM-76014] N80-15797

SPACE FLIGHT STRESS
Recent advances in Aeronautical and Space Medicine
[AGARD-CP-265] N80-14678
Physiological factors in space operations. Emphasis on space shuttle
N80-14682
Simulation of physiological systems in order to evaluate and predict the human condition in a space flight
[NASA-TM-76016] N80-14716

SPACE SHUTTLES
Physiological factors in space operations. Emphasis on space shuttle
N80-14682
Regenerative CO2 removal for PLSS application
[NASA-CR-160419] N80-14718

SPACEBORNE EXPERIMENTS
Study of fungal phenotypes after exposure to space flight parameters
A80-17986

SPACECRAFT CONTAMINATION
Contaminants --- physiological effects of spacecraft contaminants
N80-15790

SPACECRAFT ENVIRONMENTS
Biology and medicine in space: Research opportunities offered by Spacelab. An invitation to European investigators
[ESA-BR-01] N80-14677
Biological systems for human life support: Review of the research in the USSR
[NASA-TM-76018] N80-14717
The physiological basis for spacecraft environmental limits
[NASA-RP-1045] N80-15788
Atmosphere --- physiological basis for spacecraft pressure tolerance limits
N80-15789
Contaminants --- physiological effects of spacecraft contaminants
N80-15790
Thermal environment --- physiological basis for temperature tolerance limits
N80-15791
Sound and noise --- in spacecraft
N80-15793

Radiofrequency radiation --- spacecraft environmental limits N80-15794

Weightlessness --- physiological effects N80-15795

SPACECREWS

Space motion sickness A80-20018

Amino aciduria in weightlessness A80-20022

Fluid volumes changes induced by spaceflight A80-20023

The European approach to the selection and training of SL payload specialists N80-14681

SPACELAB

Biology and medicine in space: Research opportunities offered by Spacelab. An invitation to European investigators [ESA-BR-01] N80-14677

SPACELAB PAYLOADS

The European approach to the selection and training of SL payload specialists N80-14681

SPATIAL FILTERING

Spatial filtering and mechanisms of perception --- in human vision A80-20858

SPEECH

Speech patterns and aircrew workload N80-14754

SPINAL CORD

Topographic characteristics of post-synaptic actions of primary vestibular fibers on the vestibulospinal neurons of Deiters nucleus A80-20681

RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization [NASA-TM-75983] N80-14672

STANDARDS

Derivation of presbycusis and Noise Induced Permanent Threshold Shift (NIPTS) to be used for the basis of a standard on the effects of noise on hearing [AD-A071310] N80-14690

STATISTICAL DECISION THEORY

Validation and error in multiplicative utility functions [AD-A073362] N80-14698

A criterion validation of multiattribute utility analysis and of a group communication strategy [AD-A073364] N80-14699

Importance weight assessment for additive, riskless preference functions: A review [AD-A073365] N80-14700

Are important weights sensitive to the range of alternatives in multiattribute utility measurement [AD-A073366] N80-14701

STIMULANT

Psychostimulants N80-15817

STRESS (PHYSIOLOGY)

Evaluation of human strain during interrupted exposure to vibration A80-17726

Hormonal regulation of calcium and phosphorus homeostasis during physical activity A80-20584

Advances in microwave-induced neuroendocrine effects - The concept of stress A80-21025

Micromorphology of neurohypophysis of rats under experimental conditions [NASA-TM-75947] N80-14671

Supersonic aerial transport: Medical and physiological aspects --- Concorde aircraft N80-14683

Three instruments for assessment of WBGT and a comparison with WGT (BOTSBALL) [AD-A074979] N80-14691

Extended analysis of small group performance and the effects of contingency management in a programmed environment [AD-A068665] N80-14705

Concepts of workload --- study of work capacity and pilot performance in terms of physiological and psychological stress N80-14740

Concepts of fatigue --- survey of studies on pilot performance and flight fatigue discussed in terms of physiological and psychological stress N80-14741

Concepts of stress N80-14742

Influence of hypokinesis on physiological functions in fowl [NASA-TM-75999] N80-15778

Rat reaction to hypokinesia after prior adaptation to hypoxia [NASA-TM-75964] N80-15782

STRESS (PSYCHOLOGY)

Psychophysiological monitoring of operator's emotional stress in aviation and astronautics A80-20449

The effect of certain extremal factors on the human auditory function A80-21038

Concepts of workload --- study of work capacity and pilot performance in terms of physiological and psychological stress N80-14740

Concepts of fatigue --- survey of studies on pilot performance and flight fatigue discussed in terms of physiological and psychological stress N80-14741

Concepts of stress N80-14742

Handling qualities, workload and heart rate N80-14750

Pupillometric methods of workload evaluation: Present status and future possibilities --- pilot workload N80-14752

Speech patterns and aircrew workload N80-14754

An exploratory study of psychophysiological measurements as indicators of air traffic control sector workload N80-14755

Individual and system performance indices for the air traffic control system N80-14756

Workload and stress in air traffic controllers N80-14757

Assessment correlates of workload and performance N80-14758

SUPERSONIC FLIGHT

Supersonic aerial transport: Medical and physiological aspects --- Concorde aircraft N80-14683

SUPINE POSITION

Joint Soviet-American experiment on hypokinesia: Experimental results [NASA-TM-76013] N80-15796

SURGERY

Motion sickness. I - A theory. II - A clinical study based on surgery of cerebral hemisphere lesions. III - A clinical study based on surgery of posterior fossa tumors A80-20452

Intra-ocular pressure normalization technique and equipment [NASA-CASE-LEW-12955-1] N80-14684

SURVEILLANCE RADAR

Time simulation of an air surveillance task with varying amounts of radar information [AD-A074866] N80-14722

SWEAT

Quantitative study of free amino acids in human eccrine sweat excreted from the forearms of healthy trained and untrained men during exercise A80-17727

SYMMETRY

A mathematical model of the disruption of mirror symmetry in prebiological evolution A80-20680

T

TARGET ACQUISITION

Process model of how the human operator tracks discontinuous inputs [AD-A069001] N80-14712

TECHNOLOGY ASSESSMENT
US aircrew chemical defense assemblies
N80-14736

TECHNOLOGY UTILIZATION
Perspectives of the utilization of hyperbaric oxygenation in aviation medicine
A80-20500

TELECOMMUNICATION
Electromagnetic radiation from selected telecommunications systems
A80-21018

TELEOPERATORS
Teleoperators under the sea
[PB-299883/9] N80-15824

TELEVISION SYSTEMS
Real-time simulation of FLIR and LLLTV Systems for aircrew training
A80-20899

TEMPERATURE COMPENSATION
Temperature compensation of the metabolism of serotonin in the brain of hibernating mammals
A80-18082

TEMPERATURE CONTROL
A controlled rate freeze/thaw system for cryopreservation of biological materials
[NASA-CR-162531] N80-14675

TEMPERATURE EFFECTS
Heat stress exposure of aerial spray pilots
A80-20451

THERMAL STRESSES
Heat stress exposure of aerial spray pilots
A80-20451

THRESHOLDS (PERCEPTION)
Derivation of presbycusis and Noise Induced Permanent Threshold Shift (NIPTS) to be used for the basis of a standard on the effects of noise on hearing
[AD-A071310] N80-14690

TIME SHARING
Mathematical concepts for modeling human behavior in complex man-machine systems
A80-19025

TISSUES (BIOLOGY)
RF-field interactions with biological systems - Electrical properties and biophysical mechanisms
A80-21039

Frequency and power windowing in tissue interactions with weak electromagnetic fields
A80-21032

Effect of prolonged hypokinesia on tissue blood flow
[NASA-TM-76005] N80-14688

Mechanism of disorder of plastic processes in tissue during prolonged hypokinesia
[NASA-TM-75955] N80-15799

TOXIC DISEASES
Therapy on nerve agent poisoning
N80-14732

TOXIC HAZARDS
Maintenance of air operations while under attack with chemical agents --- protective clothing
[AGARD-CP-264-SUPPL] N80-14728

Approaches to CW agent area detection systems for airfields
N80-14733

Philosophy of protection of US aircrews against chemical warfare agents
N80-14734

TOXICITY
The effects of acute and chronic low dose exposure to anticholinesterases
N80-14729

TOXICOLOGY
Toxic polypeptides and uremia
[PB-301063/4] N80-15803

Biological screening of complex samples from industrial/energy processes
[PB-300459/5] N80-15805

TRACKING (POSITION)
Process model of how the human operator tracks discontinuous inputs
[AD-A069001] N80-14712

TRAINING EVALUATION
Proficiency maintenance and assessment in an instrument flight simulator
A80-19023

TRANSFER OF TRAINING
Proficiency maintenance and assessment in an instrument flight simulator
A80-19023

TREMORS
Study on the neuronal circuits implicated in postural tremor and hypokinesia
[NASA-TM-76004] N80-15783

TUMORS
Motion sickness. I - A theory. II - A clinical study based on surgery of cerebral hemisphere lesions. III - A clinical study based on surgery of posterior fossa tumors
A80-20452

U

U.S.S.R.
Soviet and Eastern European research on biological effects of microwave radiation
A80-21027

U.S.S.R. SPACE PROGRAM
Scientific biomedical studies during the flight of the first Bulgarian cosmonaut
A80-19100

UNDERWATER ENGINEERING
Model task for the dynamics of an underwater two-legged walker
[NASA-TM-75697] N80-15822

UNDERWATER VEHICLES
Teleoperators under the sea
[PB-299883/9] N80-15824

UREAS
Dialysis system --- using ion exchange resin membranes permeable to urea molecules
[NASA-CASE-NPO-14101-1] N80-14687

UROLOGY
Toxic polypeptides and uremia
[PB-301063/4] N80-15803

V

VALUE
Subjective versus statistical importance weights. A criterion validation
[AD-A073367] N80-14702

VECTORCARDIOGRAPHY
Confidence regions of planar cardiac vectors
A80-19850

VESTIBULAR TESTS
A sudden-stop vestibulovisual test for rapid assessment of motion sickness manifestations
A80-20444

VESTIBULES
Topographic characteristics of post-synaptic actions of primary vestibular fibers on the vestibulospinal neurons of Deiters nucleus
A80-20681

VIBRATION
Modeling biodynamic effects of vibration, fifth year
[AD-A073819] N80-14719

Physical forces generating acceleration, vibration, and impact --- physiological effects
N80-15792

VIBRATION EFFECTS
Evaluation of human strain during interrupted exposure to vibration
A80-17726

The effect of character size on the legibility of numeric displays during vertical whole-body vibration
A80-18839

Combined effects of broadband noise and complex waveform vibration on cognitive performance
A80-20441

VIEWING
Preliminary investigation of pilot scanning techniques of dial pointing instruments
[NASA-TM-80079] N80-14697

VISION
Visual performance: A method to assess workload in the flight environment
N80-14749

Special session on vision
[LBL-9160] N80-15802

VISUAL ACCOMMODATION
When day is done and shadows fall, we miss the airport most of all --- visual accommodation and aircraft flight safety
A80-19024

VISUAL ACUITY
The effect of character size on the legibility of numeric displays during vertical whole-body vibration
A80-18839
Daytime visual acuity of observers through a window with and without binoculars
[AD-A074722] N80-15800
VISUAL AIDS
Motor Vehicle Manufacturers Association (MVMA) Two-Dimensional Crash Victim Simulation tutorial system: Audio-visual program
[PB-299257/6] N80-14724
VISUAL DISCRIMINATION
Theoretical problems in modeling color grating detection --- in human vision
A80-20861
A facilitation effect in orientation discrimination
[AD-A072726] N80-14713
VISUAL FLIGHT
When day is done and shadows fall, we miss the airport most of all --- visual accommodation and aircraft flight safety
A80-19024
VISUAL PERCEPTION
Spatial filtering and mechanisms of perception --- in human vision
A80-20858
Special session on vision
[LBL-9160] N80-15802
VISUAL PIGMENTS
Energy uptake in the first step of visual excitation
A80-20387
VISUAL STIMULI
Visual cortical neurons - Are bars or gratings the optimal stimuli
A80-17711
A sudden-stop vestibulovisual test for rapid assessment of motion sickness manifestations
A80-20444
A facilitation effect in orientation discrimination
[AD-A072726] N80-14713
VISUAL TASKS
Hypnotics and the management of disturbed sleep
N80-15818
VITAMINS
The effect of age and vitamin provision of pilots on their night vision characteristics
A80-21040

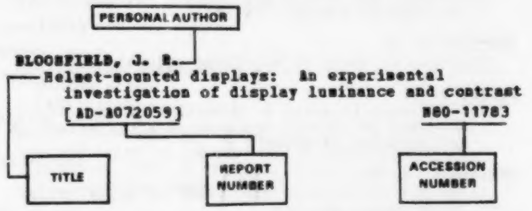
W

WAKEFULNESS
Sleep, Wakefulness and Circadian Rhythm
[AGARD-LS-105] N80-15806
Vigilance and attention
N80-15811
Biological rhythms of man living in isolation from time cues
N80-15813
WALKING MACHINES
Model task for the dynamics of an underwater two-legged walker
[NASA-TM-75697] N80-15822
WARNING SYSTEMS
Approaches to CW agent area detection systems for airfields
N80-14733
Some human factors issues in the development and evaluation of cockpit alerting and warning systems
[NASA-RP-1055] N80-15821
WEIGHTING FUNCTIONS
Validation and error in multiplicative utility functions
[AD-A073362] N80-14698
A criterion validation of multiattribute utility analysis and of a group communication strategy
[AD-A073364] N80-14699
Importance weight assessment for additive, riskless preference functions: A review
[AD-A073365] N80-14700
Are important weights sensitive to the range of alternatives in multiattribute utility measurement
[AD-A073366] N80-14701
Subjective versus statistical importance weights. A criterion validation
[AD-A073367] N80-14702
WEIGHTLESSNESS
A study of metabolic balance in crewmembers of Skylab IV
A80-20021
Amino aciduria in weightlessness
A80-20022
Recent advances in Aeronautical and Space Medicine
[AGARD-CP-265] N80-14678
Physiological factors in space operations. Emphasis on space shuttle
N80-14682
Weightlessness --- physiological effects
N80-15795
WEIGHTLESSNESS SIMULATION
Exercise response to simulated weightlessness
A80-20019
A mathematical and experimental simulation of the hematological response to weightlessness
A80-20020
Effect of hypogravity on human lymphocyte activation
A80-20446
WIENER FILTERING
Interpreting nonlinear systems - The third order kernel of the eye movement control system
A80-20860
WORK
Work performance as a function of the interaction of ability, work values, and the perceived work environment
[AD-A068893] N80-14707
Concepts of workload --- study of work capacity and pilot performance in terms of physiological and psychological stress
N80-14740
WORK CAPACITY
Concepts of workload --- study of work capacity and pilot performance in terms of physiological and psychological stress
N80-14740
WORK-REST CYCLE
Tolerance to shift work: A chronologic approach
N80-15815
WORKLOADS (PSYCHOPHYSIOLOGY)
The effect of aircraft noise on the functional state of human operators
A80-21039
Survey of methods to assess workload
[AGARD-AG-246] N80-14739
Concepts of workload --- study of work capacity and pilot performance in terms of physiological and psychological stress
N80-14740
Some considerations concerning methods to evaluate and assess workload in aircraft pilots
N80-14743
Physiologic aspects of workload/fatigue/stress
N80-14744
Aircrew workload assessment techniques --- human factors engineering study of performance of flight crews workloads
N80-14746
Workload assessment methodology development
N80-14747

PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 205)* APRIL 1980

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ADEY, W. R.
Frequency and power windowing in tissue interactions with weak electromagnetic fields
A80-21032

ALBANESE, R. A.
Quantitative military workload analysis
N80-14748

ALBRECHT, D. G.
Visual cortical neurons - Are bars or gratings the optimal stimuli
A80-17711

ALEXANDER, M.
Anthropometric sizing, fit-testing and evaluation of the MBU-12/P oral-nasal oxygen mask
[AD-A074723] N80-14692

ALPEROVITCH, Y.
Man-machine communication in computer-aided remote manipulation
[AD-A074566] N80-15823

AMODEO, P. A., JR.
Comparison of diurnal fluctuations of dissolved inorganic carbon and algal productivity estimates in an oligotrophic and mesotrophic freshwater environment
[PB-301201/0] N80-15785

ANSELMO, V. J.
A controlled rate freeze/thaw system for cryopreservation of biological materials
[NASA-CR-162531] N80-14675

ANTONOVA, G. A.
Activity of cholinesterases of blood and heart in rats of different sex and age during muscular loads and hypokinesia
[NASA-TM-75951] N80-15781

ARNOLD, E. L.
Serum cholesterol levels in selected Air Force cadets compared with levels in the West Point study
A80-20442

ASTLE, L.
Synthesis and biological screening by novel hybrid fluorocarbon hydrocarbon compounds for use as artificial blood substitutes
[NASA-CR-162537] N80-14689

ATLAN, H.
Review of cell aging in Drosophila and mouse
A80-17741

AVETIKIAN, SH. T.
The effect of antiorthostatic stimuli on human operators studied using rheography data
A80-20082

AZHEVSKII, P. IA.
Perspectives of the utilization of hyperbaric oxygenation in aviation medicine
A80-20500

B

BAEHR, E. F.
Intra-ocular pressure normalization technique and equipment
[NASA-CASE-LEW-12955-1] N80-14684

BANTZER, P.
Quantitative study of free amino acids in human eccrine sweat excreted from the forearms of healthy trained and untrained men during exercise
A80-17727

BARASHOVA, Z. I.
Rat reaction to hypokinesia after prior adaptation to hypoxia
[NASA-TM-75964] N80-15782

BARRON, F. H.
Validation and error in multiplicative utility functions
[AD-A073362] N80-14698

BARTLETT, C. J.
Rating errors of inconsistency as a function of dimensionality of behavioral anchors
[AD-A068922] N80-14710

BATTOCLETTI, J. H.
Steady magnetic fields in noninvasive electromagnetic flowmetry
A80-21033

BEARDEN, T. E.
A mind/brain/matter model consistent with quantum physics and UFO phenomena
[AD-A068988] N80-14711

BEATTY, J.
Pupillometric methods of workload evaluation: Present status and future possibilities
N80-14752

BECKER, J. H.
MVMA Two-Dimensional Crash Victim Simulation, version 4, volume 3
[PB-299307/9] N80-14727

BEDARD, P.
Study on the neuronal circuits implicated in postural tremor and hypokinesia
[NASA-TM-76004] N80-15783

BEEBE, T.
Individual and system performance indices for the air traffic control system
N80-14756

BELAKOVSKII, M. S.
Effect of 1 alpha-hydroxy-cholecalciferol and varying phosphorous content in the diet on calcium phosphorous metabolism in hypokinetic rats
A80-20445

BELETSKII, V. V.
Model task for the dynamics of an underwater two-legged walker
[NASA-TM-75697] N80-15822

BELL, T. R.
Technologies for the handicapped and the aged
[NASA-TM-80842] N80-14715

BENNETT, R. O.
Motor Vehicle Manufacturers Association (MVMA) Two-Dimensional Crash Victim Simulation tutorial system: Self-study guide
[PB-299256/8] N80-14723
Motor Vehicle Manufacturers Association (MVMA) Two-Dimensional Crash Victim Simulation tutorial system: Audio-visual program
[PB-299257/6] N80-14724

MVMA Two-Dimensional Crash Victim Simulation, version 4, volume 1
[PB-299305/3] N80-14725
MVMA Two-Dimensional Crash Victim Simulation, version 4, volume 2
[PB-299306/1] N80-14726
MVMA Two-Dimensional Crash Victim Simulation, version 4, volume 3
[PB-299307/9] N80-14727

BENSCH, K. G.
Review of cell aging in Drosophila and mouse
A80-17701

BERMUDEZ, J. M.
Effect of peripherally presented visual signals on pilot performance during flight simulation
[AD-A073604] N80-14703

BISHOP, K.
Process model of how the human operator tracks discontinuous inputs
[AD-A069001] N80-14712

BJURSTEDT, H.
Biology and medicine in space: Research opportunities offered by Spacelab. An invitation to European investigators
[ESA-BR-01] N80-14677

BLAZHEEVICH, N. V.
Effect of 1 alpha-hydroxy-cholecalciferol and varying phosphorous content in the diet on calcium phosphorous metabolism in hypokinetic rats
A80-20445

BLEIFELD, W.
Left ventricular relaxation and filling pattern in different forms of left ventricular hypertrophy - An echocardiographic study
A80-18975

BORLAND, R. G.
Hypnotics and the management of disturbed sleep
N80-15818

BORMAN, E. A.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago
MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library

WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 206)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in April 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, at the price $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 169 reports, articles and other documents announced during April 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA).* The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche (1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $65.00 domestic; $130.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

EXTENDED DURATION ORBITER STUDY: CO2 REMOVAL AND WATER RECOVERY Final Report
R. D. Marshall, G. S. Ellis, F. H. Schubert, and R. A. Wynveen
May 1979 91 p refs
(Contract NAS9-15218)
(NASA-CR-160317; LSI-ER-319-24) Avail: NTIS
HC A05/MF A01 CSCL 06K

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

AEROSPACE MEDICINE AND BIOLOGY

A Continuing Bibliography (Suppl. 206)

MAY 1980

IAA ENTRIES

A80-21094 # Simulation of walking under conditions of weightlessness (Imitatsiia khod'by v nevesomosti). V. V. Beletskii and N. S. Konikova. *Akademiia Nauk SSSR, Izvestiia, Mekhanika Tverdogo Tela*, Sept.-Oct. 1979, p. 48-53. In Russian.

The analysis deals with the plane motions of a dynamic biped walking machine consisting of 5 inertial elements: a balancer-body and two identical two-link legs. It is shown that simulation of biped walking under zero-g conditions requires appreciably smaller control moments than in the presence of a gravitational field. V.P.

A80-21421 # Ecological physiology of the brain (Ekologicheskaia fiziologiia mozga). N. N. Vasilevskii. Leningrad, Izdatel'stvo Meditsina, 1979. 200 p. 294 refs. In Russian.

Neurophysiological mechanisms of the adaptive activity of the brain are examined. Specifically, attention is given to: (1) adaptive self-regulation and the 'plasticity' of neurodynamic processes, (2) the effects of extreme conditions (including sensory deprivation) on the adaptive plasticity of the brain, (3) operant controlled neural activity, (4) elementary selective response systems, and (5) mechanisms of conditioned reflexes as forms of selective response. B.J.

A80-21539 Training and acclimatization - Effects on responses to exercise in a desert environment. C. L. Wells, S. H. Constable, and A. L. Haan (Arizona State University, Tempe, Ariz.). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 105-112. 20 refs.

A80-21540 Central circulation and metabolism of the healthy man during postural exposures and arm exercise in the head-down position. O. G. Gazenko, V. I. Shumakov, L. I. Kakurin, V. E. Katkov, V. V. Chestukhin, V. M. Mikhailov, A. Z. Troshin, and V. N. Nesvetov (Ministry of Health of USSR, Institute of Biomedical Problems and Institute of Transplantology and Artificial Organs, Moscow, USSR). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 113-120. 39 refs.

A80-21541 Comparison of two techniques for the development and maintenance of tracking behavior in monkeys. D. F. McCoy, S. R. Aeschleman, G. B. Nallan, and G. M. Pace (Kentucky, University, Lexington, Ky.). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 121-125. Grant No. AF-AFOSR-75-2751.

The present study compared two methods by which animal subjects can be taught to perform a pursuit tracking task. Rhesus monkeys were trained to track in order to avoid shock (Method No. 1) or to obtain food (Method No. 2). One animal received training under both procedures. Both techniques were effective; however, the method utilizing shock produced faster learning and more efficient performance. The possible reasons for these differences are discussed along with generality of the results. These methods should have implications for tracking research in which animal models are required. (Author)

A80-21542 Blockade of the different enzymatic steps in the synthesis of brain amines and memory /CAR/ in hypobaric hypoxic rats treated and untreated with L. Dopa. F. Boismare, M. Le Poncin-Lafitte, and J. R. Rapin (Rouen-Haute Normandie, Université, Rouen, France). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 126-128. 9 refs.

A80-21543 Oxygenation and ambient air pressure influences on alcohol-induced nystagmus in rabbits. L. M. Odkvist (University Hospital, Linkoping, Sweden) and W. J. Oosterveld (Wilhelmina Gasthuis, Amsterdam, Netherlands). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 129-131. 39 refs.

A80-21544 * Simulated weightlessness - Effects on bioenergetic balance. J. P. Jordan, H. A. Sykes, J. C. Crownover, C. L. Schatte, J. B. Simmons, II, and D. P. Jordan (Colorado State University, Fort Collins, Colo.). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 132-136. 35 refs. Grant No. NsG-2232.

As a prelude to a flight experiment, an attempt was made to separate energy requirements associated with gravity from all other metabolic needs. The biological effects of weightlessness were simulated by suspending animals in a harness so that antigravity muscles were not supporting the body. Twelve pairs of rats were allowed to adapt to wearing a harness for 5 d. Experimental animals were then suspended in harness for 7 d followed by recovery for 7 d. Control animals were harnessed but never suspended. Oxygen consumption, carbon dioxide production and rate of (C-14)O2 expiration from radio-labeled glucose were monitored on selected days. Food intake and body mass were recorded daily. Metabolic rate decreased in experimental animals during 7 d of suspension and returned to normal during recovery. Although some of the metabolic changes may have related to variation in food intake, simulated weightlessness appears to directly affect bioenergetic balance. (Author)

A80-21545 Permeability changes in cerebral, iridic, and retinal vessels during experimental decompression sickness in the rat. T. Tervo, J. Lethosalo, V.-P. Lehto, M. Heino, I. Kantola, and L. A. Laitinen (Finnish Navy; Central Military Hospital I; Helsinki, University, Helsinki, Finland). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 137-141. 29 refs.

A80-21546 **Development of Performance Evaluation Tests for Environmental Research /PETER/ - Complex counting test.** R. S. Kennedy and A. C. Bittner, Jr. (U.S. Naval Medical Research and Development Command, Naval Aerospace Medical Research Laboratory, New Orleans, La.). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 142-144. 12 refs.

This study is the first in a program to develop a battery of Performance Evaluation Tests for Environmental Research (PETER). Nineteen volunteer subjects were tested daily for three weeks on a complex task requiring the operator to keep simultaneous track of several things with changing states. Average daily performances are reported as well as reliabilities of three main types: (1) internal consistency of the test; (2) sensitivity - the ability to differentiate subjects; and (3) stability - consistency of measurement over repeated sessions. The results showed that, on this task, learning was accomplished quickly, and performance stayed level for three weeks. The cross-trial reliability for this test was found relatively stable after 3 d of practice, with a decline of only r = .94 to r = .79 over 11 d. This task is further noted as having several characteristics which make it particularly suitable for use in environmental research. It is concluded that the complex counting test can be recommended for use in environmental and other time-course research. (Author)

A80-21547 * **Physiological response to hyper- and hypogravity during rollercoaster flight.** R. J. von Baumgarten, H. Vogel (Mainz, Universität, Mainz, West Germany), G. Baldrighi (Michigan, University, Ann Arbor, Mich.), and R. Thümler (Michigan, University, Ann Arbor, Mich.; Mainz, Universität, Mainz, West Germany). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 145-154. 27 refs. Contract No. NAS2-9466.

Twenty-six healthy male subjects were flown in a Lear jet aircraft through rollercoaster and parabolic weightlessness flight. Eye movements, respiration, and blood volume pulse were recorded on magnetic tape. The same subjects underwent a battery of five vestibular tests in the laboratory on the ground. One subject in each flight was flown in an upright position, the other in a 90 deg forward tilted head position. The forward tilted subjects always reported motion sickness earlier and after fewer rollercoaster maneuvers than the upright-sitting subjects. It is concluded that the susceptibility to changes of X-axis acceleration is higher than to changes of Z-axis acceleration. Correlation was found between the ability to estimate the subjective vertical (modified Müller-Aubert-test), optokinetic nystagmus asymmetries, and susceptibility to rollercoaster flight sickness. (Author)

A80-21548 **Effect of alcohol ingestion on man's thermoregulatory responses during cold water immersion.** T. Graham and K. Baulk (Guelph, University, Guelph, Ontario, Canada). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 155-159. 23 refs.

A80-21549 **Bioman - An improved occupant-crew station compliance modeling system.** G. D. Frisch (U.S. Naval Medical Research and Development Command, Naval Aerospace Medical Research Laboratory, New Orleans, La.) and L. A. D'Aulerio (U.S. Naval Material Command, Naval Air Development Center, Warminster, Pa.). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 160-167. 13 refs. Navy-supported research.

A computerized, three-dimensional model of the human body and aircraft crew station, to be used in evaluating the physical compatibility of crew members with their stations from the points of view of crew performance and safety, is presented. The graphics model uses as input data generated by crew station geometry and occupant dynamic models, as well as human dynamic response data and test track and ejection tower test data. The Cockpit Geometry Evaluation Computer Program System is used to check and transform digitized crew station data, while the Calspan Simulator program is used to simulate occupant response. The human body can be represented graphically as a set of ellipsoids, as in the Calspan program, or by a high-resolution topographic method, taking into account possible head protection. The package is capable of displaying crew responses from omnidirectional inputs from any perspective, thus making it applicable to aircraft ejections, carrier arrested landings and ditchings, the design of the crew station interiors, and other crew enclosures. A.L.W.

A80-21550 **The effect of propranolol on human psychomotor performance.** A. D. Broadhurst (West Suffolk Hospital, Bury St. Edmunds, England). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 176-179. 24 refs.

Despite their widespread usage the effect of beta blockers on human performance has been only sparsely studied and results of investigations are discrepant. This study examines the effect of one of the most commonly prescribed beta adrenergic blocking drugs, propranolol, on psychomotor function. To demonstrate the sensitivity of the test method and to provide some basis for comparison, the effect of small doses of sodium amylobarbitone on psychomotor performance is also measured. Results indicate that propranolol in a single dose of 40 mg produces a small but significant decrement of performance, an effect comparable to that of 25 mg of sodium amylobarbitone. Habituation to chronic administration of propranolol at a daily dose level of 120 mg is also apparent. The clinical significance of these effects, particularly in aviation medicine, is discussed. (Author)

A80-21551 **Trapped gas dysbarism requiring recompression therapy.** R. Beson, T. Wilson, and J. Etheredge ((U.S. Navy, Naval Air Station, Norfolk, Va.). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 180-181. 11 refs.

A case history of trapped gas dysbarism (barotrauma) requiring recompression therapy is presented to demonstrate the severity of the syndrome. Following exposure to a simulated altitude of 40,000 ft in a low-pressure chamber, a 27-year old male reported nausea, abdominal cramping and a sense of detachment from his surroundings. A tentative diagnosis of dysbarism-pain only-persistent was made, which was later changed to barotrauma (trapped intestinal gas). A Table 5 recompression schedule was subsequently employed in a hyperbaric facility to a depth of 60 ft, after 22 min of which the symptoms disappeared. Intermittant mild abdominal cramping was then experienced over the next 12 days, after which the patient was asymptomatic. It is concluded that flight surgeons and physiologists must be aware of the potentially severe complications of barotrauma as well as of decompression sickness. A.L.W.

A80-21552 **The 1976 accident experience of civilian pilots with static physical defects.** J. R. Dille and C. F. Booze (FAA, Civil Aeromedical Institute, Oklahoma City, Okla.). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 182-184. 5 refs.

The paper reports on aircraft accident experience of civilian pilots with physical defects in 1976. It was found that pilots with blindness in either eye or absence of either eye, deficient color vision with a waiver, and deficient distant vision had significantly more accidents than were expected on the basis of observed-to-expected ratios. The accident rates were calculated in 1975, and the rates for airmen with blindness in one eye or absence of an eye were found to be significant; the observed-to-expected ratios for 1976 were 1.91 for deficient color vision with a waiver, 1.28 for contact lens users, 1.37 for blindness in- or absence of either eye, and 1.62 for deficient distant vision. Finally, it was shown that the accident rates per 100,000 h of cumulative and last 6 months flying experience were significantly greater for contact lens users and monocular pilots than for the active airman population. A.T.

A80-21553 * **An ultrasonic plethysmograph for space flight applications.** P. K. Bhagat, J. F. Lafferty, D. Bowman, and M. P. Kadaba (Kentucky, University, Lexington, Ky.). *Aviation, Space, and Environmental Medicine,* vol. 51, Feb. 1980, p. 185-188. 14 refs. Contracts No. NAS9-14392; No. NAS9-15452.

The development of an ultrasonic plethysmograph based on the transit time measurement principle is reported, which meets the space-imposed requirements for evaluating cardiovascular deconditioning. It consists of a pulse generator, pulse receiver amplifier, voltage comparator, synchronous pulse generator, elapsed time counter, and transmit and receive piezoelectric crystals resonant at 2 MHz and of 3 mm diameter. The transit time for an ultrasonic pulse to propagate across a limb cross section is computed in a digital fashion using a 32 MHz clock, and resolution is 0.049 mm with the range being approximately 200 mm. Experimental results regarding dynamic system response were found comparable in both accuracy and sensitivity to those of a Whitney strain gage using a 50 torr venous occlusion. J.P.B.

A80-21781 'Acetonitrile' - A plausible source of amino acids on the primitive earth. A. K. Pant, D. D. Melkani, and H. D. Pathak (Kumaun University, Naini Tal, India). *British Interplanetary Society, Journal (Interstellar Studies),* vol. 32, June 1979, p. 223-227. 27 refs.

Acetonitrile, under mild hydrolytic conditions, gives rise to a number of ninhydrin positive compounds, some of which are of biological significance. The compounds identified include lysine, aspartic acid, serine, glycine, alpha-alanine and leucine. Metal oxide sensitizers remarkably affect the formation of amino acids. Since acetonitrile is easily formed by sparking a mixture of methane and ammonia, the main constituents of the primitive atmosphere, it is likely that it may have played a role in chemical evolution. (Author)

A80-21851 # An evaluation of heart rate during activity of high psychological and physiological stress (Zur Beurteilung der Herzschlagfrequenz bei psycho-physisch hoch belastenden Tätigkeiten). U. Philipp. Darmstadt, Technische Hochschule, Fachbereich Maschinenbau, Dr.-Ing. Dissertation, 1979. 187 p. 210 refs. In German.

The work examines the selection and testing of methods that determine heart rate on the basis of working condition examinations under various stress factors. These methods include the application of central nervous system functions and the simulation studies of processes to scaling and measuring heart rate with respect to stress reaction. The application of these techniques in engineering is examined and some examples are tested, whose results can help to determine the evaluation of heart rate under various stress conditions. C.F.W.

A80-21982 * Microbial sulfate reduction measured by an automated electrical impedance technique. R. S. Oremland and M. P. Silverman (NASA, Ames Research Center, Extraterrestrial Biology Div., Moffett Field, Calif.). *Geomicrobiology Journal,* vol. 1, no. 4, 1979, p. 355-372. 27 refs.

Electrical impedance measurements are used to investigate the rates of sulfate reduction by pure cultures of and sediments containing sulfur-reducing bacteria. Changes in the electrical impedance ratios of pure cultures of Desulfovibrio aestuarii and samples of reduced sediments from San Francisco Bay were measured by a Bactometer 32, and sulfate reduction was followed by measuring the incorporation of (S-35) sulfate into metal sulfides. The growth of the bacteria in pure culture is found to result in an increase of 0.2200 in the impedance ratio within 24 h, accompanied by increases in protein, ATP, sulfide and absorptance at 660 nm, all of which are inhibited by the addition of molybdate. Similar responses were observed in the sediments, although impedance ratio responses were not completely inhibited upon the addition of molybdate, due to the presence of nonsulfate-respiring microorganisms. Experiments conducted with sterile media and autoclaved sediments indicate that the presence of H2S together with iron is responsible for the impedance effect, and sulfate reduction rates ranging between 0.85 and 1.78 mmol/l per day are estimated for the sediments by the impedance technique. A.L.W.

A80-21984 * Residual nutational activity of the sunflower hypocotyl in simulated weightlessness. D. K. Chapman and A. H. Brown (Pennsylvania, University, Philadelphia, Pa.). *Plant and Cell Physiology,* vol. 20, no. 2, 1979, p. 473-478. 19 refs. Grants No. NGR-39-010-149; No. NGR-39-030-010; Contract No. NAS9-15340.

The gravity dependence of circumnutational activity in the sunflower hypocotyl is investigated under conditions of simulated weightlessness. Seedling cultures of the sunflower Helianthus annuus were placed four days after planting in clinostats rotating at a rate of 1.0 rpm in the horizontal or somersaulting configurations, and plant movements around their growth axes were recorded in infrared light by a time-lapse closed-circuit video system. The amplitudes and mean cycle durations of the plant nutations in the horizontal and tumbling clinostats are observed to be 20% and 72%, and 32% and 74%, respectively, of the values observed in stationary plants; extrapolations to a state of zero g by the imposition of small centripetal forces on horizontally clinostated plants also indicate some nutational motion in the absence of gravity. It is concluded that the results are incompatible with the model of Israelsson and Johnsson (1967) of geotropic response with overshoot for sunflower circumnutation; however, results of the Spacelab 1 mission experiment are needed to unambiguously define the role of gravitation. A.L.W.

A80-21988 * Noninvasive measures of bone bending rigidity in the monkey /M. nemestrina/. D. R. Young, W. H. Howard, C. Cann (NASA, Ames Research Center, Biomedical Research Div., Moffett Field, Calif.), and C. R. Steele (Stanford University, Stanford, Calif.). *Calcified Tissue International,* vol. 27, Mar. 1979, p. 109-115. 23 refs.

The in vivo bending rigidity and bone mineral content of monkey ulnae and tibiae were measured. Bending rigidity in the anteroposterior plane was measured by an impedance probe technique. Forced vibrations of the bones were induced with an electromechanical shaker, and force and velocity at the driving point were determined. The responses over the range of 100-250 Hz were utilized to compute the bending rigidity. Bone mineral content in the cross section was determined by a photon absorption technique. Seventeen male monkeys (Macaca nemestrina) weighing 6-14 kg were evaluated. Bending rigidity was correlated with the mineral content of the cross section, with a correlation coefficient of 0.899. Two monkeys were evaluated during prolonged hypodynamic restraint. Restraint produced regional losses of bone most obviously in the proximal tibia. The local bone mineral content declines 17 to 24% and the average bending rigidity declines 12 to 22%. Changes in bones leading to a reduction in mineral content and stiffness are discussed. (Author)

A80-22124 The effects of long-term intoxication by the inhalation of gaseous HF on myocardial cell metabolism and serum cardiac enzyme levels in guinea pigs (Effets de l'intoxication à long terme par inhalation de HF gazeux sur le métabolisme des cellules du myocarde et les taux sériques d'enzymes cardiaques de cobayes). P. Bourbon, J. Poey, C. Rioufol, M. Saouthi, and C. Phillibert (Institut National de la Santé et de la Recherche Médicale, Vigoulet-Auzil, Haute-Garonne; Toulouse III, Université, Toulouse, France). *Pollution Atmosphérique,* vol. 21, Oct.-Dec. 1979, p. 323-326. 10 refs. In French.

A80-22840 # Some problems of space medicine and international manned space flights (Wybrane zagadnienia medycyny kosmicznej a miedzynarodowe kosmiczne loty zalogowe). N. N. Gurovskii, A. D. Egorov (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR), and S. Baranski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 12, no. 3, 1979, p. 7-20. In Polish.

The effects of weightlessness on the human body are reviewed. Particular consideration is given to the activity of the vestibular, cardiovascular, and muscular systems under weightlessness. A model of adaptation to weightlessness is presented. The readaptation of the human body to normal gravity on the earth's surface, means of protecting the body against the negative effects of weightlessness, and the problem of rest during prolonged space flight, are also treated. Data on the performance of astronauts aboard the Salyut 6 station are examined. B.J.

A80-22967 **Adapting to two orientations - Disinhibition in a visual aftereffect.** S. Magnussen and W. Kurtenbach (Freiburg, Universität, Freiburg im Breisgau, West Germany). *Science*, vol. 207, Feb. 22, 1980, p. 908, 909. 16 refs. Research supported by the Alexander von Humboldt- Stiftung and Norges Almenvitenskapelige Forskningsrad; Deutsche Forschungsgemeinschaft Contract No. SFB-70.

The tilt aftereffect of adapting to two different orientations simultaneously is weaker than the aftereffect of adapting to the more effective of the two orientations alone. This finding is consistent with explanations of orientational aftereffects in terms of lateral inhibition between cortical orientation detectors, but not with explanations in terms of neural 'fatigue' from excitation. (Author)

A80-22969 **Linear summation of tilt illusion and tilt aftereffect.** S. Magnussen and W. Kurtenbach (Freiburg, Universität, Freiburg im Breisgau, West Germany). *Vision Research*, vol. 20, no. 1, 1980, p. 39-42. 28 refs. Research supported by the Alexander von Humboldt-Stiftung and Norges Almenvitenskapelige Forskningsrad; Deutsche Forschungsgemeinschaft Contract No. SFB-70.

A comparison of the tilt aftereffect (TAE) and the simultaneous tilt illusion (TI) revealed very similar angular functions. When an aftereffect and a simultaneous illusion of opposite signs were paired by first adapting to a clockwise orientation and then presenting the vertical test line together with a counterclockwise inducing line, the two effects summed linearly. The results suggest a unitary mechanism of TAE and TI, and are consistent with the hypothesis that they are manifestations of lateral inhibition between orientation detectors. (Author)

A80-22970 **Additivity of fusional vergence and pursuit eye movements.** J. M. Miller, H. Ono, and M. J. Steinbach (York University, Downsview, Ontario, Canada). *Vision Research*, vol. 20, no. 1, 1980, p. 43-47. 10 refs. National Research Council of Canada Grants No. A-0296; No. A-7664.

We measured binocular eye movements photoelectrically while subjects tracked a target moving smoothly along a horizontal path in the fronto-parallel plane, with interpolated step changes in depth. By measuring eye movement speeds when only fusional vergence or only pursuit was required we were able to ascertain how the vergence and pursuit movements combined when called out together. When the two were in opposite directions the net eye movement speed was equal to the difference of the vergence and pursuit components, reflecting perfect additivity. When vergence and pursuit were in the same direction a significant deviation from strict additivity was found, i.e. the combined eye movements were on average 11% slower than expected. We speculate that this attenuation may be peripheral in origin. (Author)

A80-22971 **Information used by the perceptual and oculomotor systems regarding the amplitude of saccadic and pursuit eye movements.** J. M. Miller (New School for Social Research, New York, N.Y.). *Vision Research*, vol. 20, no. 1, 1980, p. 59-68. 33 refs. Grant No. NIH-16327-09.

Measures were designed to assess the steady-state information about amplitude of eye movement used for performance of a visual localization task and for control of voluntary saccades. Each measure was applied to four experimental eye movement situations: a saccade in the dark, a saccade to a visible target, a single half-cycle, and the last of 5 half-cycles of pursuit of a target moving in a straight path with sinusoidal velocity at 0.33 Hz. The data indicate that, concerning a just-completed eye movement, (1) information available for control of voluntary saccades is no different from that used to perform a visual localization task, (2) pursuit of a target moving repetitively over a path is subject to considerable underestimation (33%) compared to pursuit of a single sweep of target motion (11% underestimation) and (3) retinal information concerning 'intended' saccade amplitude is utilized in judging the amplitude of the saccade which actually occurs. The ERS alone, however, is quite accurate and underestimates saccade amplitude by less than 4%. (Author)

A80-22972 **A two-stage identification scheme for the determination of the parameters of a model of left heart and systemic circulation.** J. W. Clark, Jr. (Rice University, Houston, Tex.), R. Y. S. Ling (McDonnell Douglas Corp., Houston, Tex.), R. Srinivasan (South Carolina, Medical University, Charleston, S.C.), J. S. Cole (Baylor College of Medicine, Houston, Tex.), and R. C. Pruett (Arco Oil, Plano, Tex.). *IEEE Transactions on Biomedical Engineering*, vol. BME-27, Jan. 1980, p. 20-29. 28 refs. NSF Grant No. ENG-77-17987.

A80-22985 # **Calorimetric measurements of microwave energy absorption by mice after simultaneous exposure of 18 animals.** S. J. Allen and W. D. Hurt (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Radio Science*, vol. 14, Nov.-Dec. 1979, Supplement, p. 1-4.

A multiple-cell calorimetric system was constructed, and the experimental procedure for its use was developed. An associated data-readout system is small, relatively inexpensive, and provides automated thermistor calibration, precise temperature measurements, and a printout of whole-body SARs. One system was used to determine the SAR of each of 18 mice that were simultaneously exposed to 2.6-GHZ radiation. (Author)

A80-22987 * **Part-body and multibody effects on absorption of radio-frequency electromagnetic energy by animals and by models of man.** O. P. Gandhi, M. J. Hagmann, and J. A. D'Andrea (Utah, University, Salt Lake City, Utah). *Radio Science*, vol. 14, Nov.-Dec. 1979, Supplement, p. 15-21. 10 refs. Grant No. DAMD17-74-C-4092; Contract No. NAS2-9555.

Fine structure in the whole-body resonant curve for radiofrequency energy deposition in man can be attributed to part-body resonances. As for head resonance, which occurs near 350 MHz in man, the absorptive cross section is nearly three times the physical cross section of the head. The arm has a prominent resonance at 150 MHz. Numerical solutions, antenna theory, and experimental results on animals have shown that whole-body energy deposition may be increased by 50 percent or more because of multiple bodies that are strategically located in the field. Empirical equations for SARs are also presented along with test data for several species of laboratory animals. Barbiturate anesthesia is sufficiently disruptive of thermoregulation that delta Ts of colonic temperature yield energy dose values in several mammals that compare quite favorably with those based on whole-body calorimetry. (Author)

A80-22988 **A geometrical-optics and an exact solution for internal fields in and energy absorption by a cylindrical model of man irradiated by an electromagnetic plane wave.** H. Massoudi, C. H. Durney (Utah, University, Salt Lake City, Utah), and C. C. Johnson. *Radio Science*, vol. 14, Nov.-Dec. 1979, Supplement, p. 35-42. 23 refs.

A geometrical-optics approximation was used to calculate the mass-normalized rate of RF energy absorption (the specific absorption rate or SAR) in cylindrical models of man and in experimental animals irradiated by an electromagnetic (EM) plane wave at high radio frequencies. Comparison of these results with corresponding geometrical-optics calculations for prolate spheroidal models showed that the relative absorptive cross section of the prolate spheroidal and cylindrical models of man are essentially the same at frequencies above 20 GHz. The exact solution for the SAR in a lossy, infinitely long homogeneous circular cylinder exposed to an electromagnetic plane wave, for perpendicular incidence and with the incident E field both perpendicular and parallel to the axis, is also given. Curves showing SAR versus frequency for cylindrical models of man and animals in comparison with composite curves obtained from prolate spheroidal calculation are presented. It is shown that the exact solution for SARs in cylindrical models of animals and human beings appears to be a good approximation in the frequency range just below the geometrical-optics limit, thus providing an important method for extending the calculation of SARs into a range of frequencies where calculations were not available previously. (Author)

A80-22989 **Heating of spherical versus realistic models of human and infrahuman heads by electromagnetic waves.** S. Rukspollmuang and K.-M. Chen (Michigan State University, East Lansing, Mich.). *Radio Science,* vol. 14, Nov.-Dec., 1979, p. 51-62. 9 refs. NSF Grant No. ENG-74-12603; Grant No. DAAG29-76-G-0201.

A numerical method based on a tensor integral equation has been employed to quantify the induced EM heating in realistic models of the human and infrahuman head. The head consists of a brain of realistic shape and eyes that are surrounded by bone structure. The numerical method has also been used to determine the induced EM heating in spherical models of human and infrahuman heads and brains. The EM heating induced in the brain of the realistic model is lower than that induced in the brain of the spherical model. The bony structure of the skull tends to attenuate heating of the brain, including the eyes. (Author)

McDougall (Washington, University, Seattle, Wash.). *Radio Science,* vol. 14, Nov.-Dec. 1979, Supplement, p. 63-74. U.S. Rehabilitation Services Administration Grant No. 16-P-56818; Grant No. NIH-N01-ES-6-2133.

A80-22992 # **Induction of calcium-ion efflux from brain tissue by radio-frequency radiation - Effects of modulation frequency and field strength.** C. F. Blackman, J. A. Elder, C. M. Weil, S. G. Benane, D. C. Eichinger, and D. E. House (U.S. Environmental Protection Agency, Health Effects Research Laboratory, Research Triangle Park, N.C.). *Radio Science,* vol. 14, Nov.-Dec. 1979, Supplement, p. 93-98. 28 refs.

A80-22993 **Extremely-low-frequency fields and the slime mold Physarum polycephalum - Evidence of depressed cellular function and of internuclear interaction.** B. Greenebaum, E. M. Goodman, and M. T. Marron (Wisconsin, University, Kenosha, Wis.). *Radio Science,* vol. 14, Nov.-Dec. 1979, Supplement, p. 103-107. 12 refs. Navy-supported research.

The acellular slime mold Physarum polycephalum has been exposed continuously to a variety of low-level, extremely-low-frequency (ELF) fields for periods ranging from two months to five years. Changes in several biological parameters have been observed that are significant (P less than 0.05) and reproducible. Cultures were exposed to 75-, 60-, and 45-Hz CW, and 76-Hz frequency-modulated fields. Electric-field intensities ranged from 0.04 to 0.7 V/m (rms); magnetic fields, from 0.01 to 0.2 milliteslas (rms). The observed changes are generally those of a slowing of cellular processes. A longer nuclear-division cycle and depressed respiration rate have been seen under exposure to most CW fields and to all frequency-modulated fields that have been tested. Additional experiments indicate that lengths of the nuclear-division cycle of cultures formed by mixing exposed and control samples lie between those of control and exposed cultures. Indirect measurements of chromosomal numbers of this polyploid organism indicate no statistically significant difference between exposed and control nuclei. (Author)

A80-22994 **Models of long-range order in cerebral macromolecules - Effects of sub-ELF and of modulated VHF and UHF fields.** A. R. Sheppard, S. M. Bawin, and W. R. Adey (California, University, Los Angeles, Calif.). *Radio Science,* vol. 14, Nov.-Dec. 1979, Supplement, p. 141-145. 31 refs. NSF Grant No. GB-27740; Grant No. PHS-3-R01-FD-678-03; Contract No. N00014-75-1094.

Weak RF fields (450 MHz) that were sinusoidally modulated at 16 Hz increased the efflux of calcium ion from freshly isolated chick brain. The data demonstrate upper and lower bounds for power levels of incident fields at which the change of efflux is observed. These bounds, between 0.05 mW/sq cm and 2.0 mW/sq cm, constitute an amplitude window for the calcium-efflux effect, which is also characterized by a frequency window demonstrated in previous experiments. The mechanisms by which weak low-frequency fields - or weak high-frequency fields modulated at sub-ELF rates - interact with biological tissue derive from the properties of the biological components of neuronal membrane and from the unique dielectric properties of biological tissues in fields that oscillate at brain-wave frequencies. (Author)

A80-22995 # **Contraction of smooth muscle in a microwave field.** E. R. Whitcomb, C. F. Blackman, and C. M. Weil (U.S. Environmental Protection Agency, Health Effects Research Laboratory, Research Triangle Park, N.C.). *Radio Science,* vol. 14, Nov.-Dec. 1979, Supplement, p. 155-158. 7 refs.

Spontaneous contractions of smooth muscle were observed during microwave irradiation. Isolated gut segments of adult male albino rats were exposed to 1-GHz, continuous-wave radiation by means of a capacitive-plate exposure system. For stabilization, the gut segment was maintained initially at 7 C for one hour and then at 36 C for one hour in a modified Ringer's solution prior to irradiation. During recording of contractions the gut segment was suspended in a 10-ml plastic tube and was bathed by Ringer's solution (pH 7.5) at 36 C at a flow rate of 6 ml/min from a 500-ml reservoir. Contractions were measured by a strain gauge. Frequency distributions of 500 contractions each were made before and during a single exposure and were displayed as interval-histogram patterns. Four gut preparations were exposed to radiation at intensities that resulted in specific absorption rates of either 1.2, 2.3, or 6.9 mW/g. For each absorption rate the response patterns for the four gut preparations representing a before-exposure (control) condition were summed and compared with the summed response patterns of the same preparation during exposure. No effect of irradiation by electromagnetic energy on the rate of spontaneous contractions of smooth muscle was observed. (Author)

A80-22996 # **Operant behavior and rectal temperature of squirrel monkeys during 2.45-GHz microwave irradiation.** J. de Lorge (U.S. Navy, Naval Aerospace Medical Research Laboratory, Pensacola, Fla.). *Radio Science,* vol. 14, Nov.-Dec. 1979, Supplement, p. 217-225. 13 refs.

The paper examines the operant behavior and rectal temperature of squirrel monkeys during 2.45-GHz microwave irradiation. Four monkeys were exposed for 30 min during two-hour sessions, and three monkeys were exposed for 60 min during two-hour sessions. The animals were restrained in styrofoam chairs and the exposures were made in a microwave-anechoic chamber. The behavior of the monkeys in the observing-response task was disrupted only at power densities of 50 mW/sq cm and higher, and their behavior was not consistently perturbed until the rectal temperatures increased by more than 1 C. The rectal temperature was slightly elevated at 10 mW/sq cm, it was a monotonic function of the power density, and was markedly increased at power densities between 40 and 50 mW/sq cm. A.T.

A80-22997 # **Skilled visual-motor performance by monkeys in a 1.2-GHz microwave field.** D. M. Scholl and S. J. Allen (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Radio Science,* vol. 14, Nov.-Dec. 1979, Supplement, p. 247-252. 27 refs.

Three young adult rhesus monkeys (Macaca mulatta) were exposed to radio-frequency electromagnetic radiation (RFR) at average power densities of 10 and 20 mW/sq cm, which resulted in respective SARs of 0.8 and 1.6 W/kg. Exposure sessions took place at two-day intervals until completion of three 120-minute exposures at each power level; 1.2-GHz continuous-wave (CW) irradiation was centered on a subject's head with the E-field vector parallel to the horizontal plane of the cranium. The monkeys performed a compensatory visual-tracking task with alternating periods of work and rest of 1.5-minute duration before and during exposure to radiation. During a work period, the task required continuous visual vigilance and skilled motor performance. The animals were motivated by mild electrical stimulation to maintain a circular cursor within the center 15% of an oscilloscopic display. The cursor was driven off this safe on-target area by a complex sinusoidal track that covered 40% of the display. Control data were used to establish 95% simultaneous confidence limits for the adjusted root mean square (ARMS) of tracking errors. The ARMS values from exposure sessions showed no decrement relative to control data. It is concluded that the exposures at 10 and 20 mW/sq cm did not have deleterious effects upon the skilled performance of a moderately large primate. (Author)

A80-23047 * **Loudness enhancement and decrement in four paradigms.** R. Elmasian, R. Galambos, and A. Bernheim, Jr. (California, University, La Jolla, Calif.). *Acoustical Society of America, Journal,* vol. 67, Feb. 1980, p. 601-607. 35 refs. Grants No. NIH-MH-15828; No. NGR-05-009-198; No. NIH-NS-10482.

When one tone burst (the conditioner) preceeds another (the target) by 100 ms, target loudness is enhanced if the conditioner is more intense and decreased if it is less intense. We show here that similar loudness enhancements and decrements occur when the conditioner .follows the target. In all instances, monaural loudness enhancements (in which the conditioner and target are delivered to the same ear) are greater than the dichotic enhancements (in which the conditioner is presented contralaterally), but the decrements, which are smaller than the enhancements, are similar in magnitude. Loudness enhancements and decrements are similar to sequential loudness effects and central tendency effects; the major difference is the relatively very large increases in loudness obtainable in loudness enhancement experiments. We outline a mechanism to account for these loudness phenomena and suggest that this mechanism is responsible for similar perceptual effects that occur in other stimulus dimensions and modalities. (Author)

A80-23079 # **Physiological and hygienic aspects of the effects of high and low temperatures (Fiziologo-gigienicheskie aspekty deistviia vysokikh i nizkikh temperatur).** A. N. Azhaev. Moscow, Izdatel'stvo Nauka (Problemy Kosmicheskoi Biologii. Volume 38), 1979. 264 p. 725 refs. In Russian.

The work examines the effects of low and high temperature microclimates on animals and man. Attention is given to the influence of convective, radiative, and conductive heat transfer on body thermoregulation, the salt metabolism, the cardiovascular system, and the respiratory system. Ways to protect flight crews from extremes of heat and cold are discussed, and the design of thermoregulation systems is examined. Finally, a classification of the thermal states of the human body is presented. B.J.

A80-23208 **Aircrew stress in wartime operations.** Edited by E. J. Dearnaley (Manchester, Victoria University, Manchester, England) and P. B. Warr (Medical Research Council, Social and Applied Psychology Unit, Sheffield, England). London and New York, Academic Press, 1979. 230 p. $20.

Papers concerning the reactions of air crews to the stress associated with wartime operations during World War II are presented. Specific topics include the historical background to wartime psychological research in the Royal Air Force, neurosis precipitated by flight duties, the influence of psychological disorders on operational flight efficiency, fluctuations in navigator performance during bombing sorties, physical and psychological measures of the effects of operational stress on bomber crews, the relation of landing accidents to pilot fatigue, the psychological aspects of airsickness, and experimental studies of mental fatigue and pilot error. A.L.W.

A80-23209 **The historical background to wartime research in psychology in the Royal Air Force.** D. D. Reid. In: Aircrew stress in wartime operations. London and New York, Academic Press, 1979, p. 1-8. 8 refs.

A personal account of the circumstances in World War II leading to research by the Royal Air Force on the psychological and psychiatric aspects of operational flying during wartime is presented. Attention is given to the background of medical personnel in the psychology of flight crews and the morale and neurotic conditions of bomber crews encountered in the early years of the war. The prevention of pilot breakdown by the subsequent selection during training of persons not predisposed to psychological problems and the limitation of operational tours of duty are discussed, and preliminary results obtained concerning the effects of fatigue, anxiety and temperament on pilot efficiency during flight operations are indicated. It is concluded, however, that improvements in crew morale after 1942 were probably due as much to operational success in flight activities as to the efforts of the medical service. A.L.W.

A80-23210 **Clinical and statistical study of neurosis precipitated by flying duties.** C. P. Symonds and D. J. Williams. In: Aircrew stress in wartime operations. London and New York, Academic Press, 1979, p. 9-41. 17 refs.

The 2200 cases of psychological disorder in flying personnel resulting from flying duties encountered by Royal Air Force psychiatrists during the year ending February 9, 1943, are analyzed by patient flying hours, type of duty, aircraft, diagnosis and causal factors. It is shown that nearly half of all cases arose in pilots, with pilots, wireless operators, air gunners and navigators making up 96% of the total and pilots making up the bulk of cases in all commands except bomber. When normalized to man-years in commands, it is found that the breakdown rate was greatest in air gunners and in bomber command. The incidence of neurosis is found to be directly related to the danger of the flight duty and to the patients' predisposition to neurosis. The major single cause in all the disorders is found to have been fear, with fatigue, physical injury, illness, airsickness and exhaustion playing minor roles. Nearly 80% of the patients referred were diagnosed to be suffering from anxiety states, with lesser numbers attributed to hysteria, depression and fatigue. Of the patients seeing psychiatrists, 38% returned to flying, with a relapse rate of 5% within a year, while 56% of those for whom an intermediate period of ground duty or limited flying was recommended returned to flying. A.L.W.

A80-23211 **The influence of psychological disorder on efficiency in operational flying.** D. D. Reid. In: Aircrew stress in wartime operations. London and New York, Academic Press, 1979, p. 43-62. 13 refs.

The influence of psychological disorders on aircrew efficiencies during wartime operations is investigated. Two hundred members of bomber air crews were interviewed upon their arrival at an operational station, and estimates of their predisposition to neurosis or problems with operational flight were compared with their actual flight records after 30 operations. It is found that a large percentage of the group considered predisposed to psychological problems (69%) actually suffered mental breakdowns during the period of service, while those predisposed who did not break down were considerably more likely to end up as casualties (20%) than to survive their tours of duty (5%). The various types of neurotic disorders encountered and the circumstances leading to their expression are illustrated by case histories, and implications of psychological predispositions for the preselection and reassignment of persons suffering breakdowns are discussed. A.L.W.

A80-23212 **Fluctuations in navigator performance during operational sorties.** D. D. Reid. In: Aircrew stress in wartime operations. London and New York, Academic Press, 1979, p. 63-73.

The errors made by navigators engaged in night bomber sorties in the calculation and plotting of wind vectors are analyzed in order to investigate the possible influence of psychological factors on aircrew efficiency under wartime operational conditions. Fluctuations in navigator performance are compared with the times of occurrence of acute hazards along the routes to and from the targets and in regions where opposition was encountered. Considerable variations in navigator efficiency are found, with errors reaching a maximum during and after enemy opposition and falling on the route back to base. It is suggested that these fluctuations are due to the successive effects of anticipatory, acute and persistant anxiety, which are greater than the effects of fatigue. The results are used to explain variations observed between aircrew performances observed during training and operations, and the importance of selecting personnel who are stable under stress for key operational positions is emphasized. A.L.W.

A80-23213 **Some measures of the effect of operational stress on bomber crews.** D. D. Reid. In: Aircrew stress in wartime operations. London and New York, Academic Press, 1979, p. 75-88.

Physiological and psychological measurements of the effects of operational wartime stress on bomber crews are reported as part of an investigation of the optimal tour of duty for operational flying personnel. The mean weight of bomber crews is shown to decrease during the first third of a 30-mission tour, remaining at this decreased level to the end. This decrease is not explained by selective elimination, and it is suggested that it may be due to the anxiety associated with operational stress. Increases in the numbers of men reporting sick and suffering psychological disorders during the same period are also observed, and a period of relative stability in the latter period of the tour due to an adaptation to stress is indicated. It is concluded that the first tour of 30 missions is no longer than can be performed without significant deterioration in health, and the level of weight loss observed may provide a baseline against which to judge larger deviations when diagnosing anxiety states. A.L.W.

A80-23214 **An investigation of landing accidents in relation to fatigue.** A. B. Hill and G. O. Williams. In: Aircrew stress in wartime operations. London and New York, Academic Press, 1979, p. 89-108.

The effects of fatigue on pilot landing performance are investigated for the case of bomber pilots returning after sorties of different durations. Statistics on accidents occurring during landings which were not forced or due to enemy action, recorded from April 1940 to March 1942 at RAF Bomber Command after night operations of one to ten hours, were compared. A rather high accident rate is found for sorties of under two hours or greater than 10 hours, most likely due to the difficulties leading to the recall or return of the aircraft in the former case and pilot fatigue in the latter. Within the relatively long interval of two to ten hours, within which most flights were made, there is no evidence of increasing pilot fatigue having lead to increased landing accident rates, indicating that pilots have managed to overcome the effects of the fatigue observed in laboratory experiments sufficiently to avert reportable landing accidents. A.L.W.

A80-23215 **The psychological aspects of airsickness.** C. P. Symonds and D. J. Williams. In: Aircrew stress in wartime operations. London and New York, Academic Press, 1979, p. 109-134. 10 refs.

The influence of psychological factors in the suspension of aircrew from flight duties due to airsickness is investigated. Interviews of 120 men to be suspended from Flying Training Command or Bomber Command in the RAF during wartime operations were conducted in order to determine the nature of the disability, the patient's past history of motion sickness, psychiatric history and attitude toward flying. Neurosis was judged to be present in 7.5% of the cases interviewed, with a predisposition to neurosis recognized in 42.5% and contributing to the airsickness in half of those cases. In only three cases was poor morale judged to be the major contributing factor in the development of airsickness. Constitutional motion sickness was recognized in 84% of the cases. It is concluded that the cause of suspension for airsickness in most cases is motion sickness uncomplicated by psychological factors. Psychological factors may contribute to airsickness by lowering the physiological motion tolerance or reducing the ability or willingness to endure symptoms. It is recommended that a standard method for recording airsickness be adopted for all crew members during each phase of their training in order to facilitate judgments of flight fitness. A.L.W.

A80-23216 **An experimental study of mental fatigue.** G. C. Drew. In: Aircrew stress in wartime operations. London and New York, Academic Press, 1979, p. 135-177.

The changes in human behavior occurring in a situation expected to bring about mental fatigue are investigated. Pilot trainees were asked to perform a fixed set of maneuvers in a cockpit simulator, and the responses were scored. After two hours of testing, subjects reported the subjective malaise characteristic of fatigue, and significant deteriorations of side-slip, air speed, altitude and directional performance were observed. The deterioration is attributed to a general lowering of standards as the test progresses, an increase in the magnitude of the errors made, the disregard of relationships between actions, difficulties with the artificial horizon, and increasing irritability. Other effects observed include unreliability of pilot reports on what had occurred during the test, a growing awareness of physical discomfort, forgetting to monitor minor instruments, and the appearance of entirely abnormal and inappropriate responses. Means of preventing the development of mental fatigue in operational situations are suggested. A.L.W.

A80-23217 **Pilot error - Some laboratory experiments.** D. R. Davis (Medical Research Council, Applied Psychology Research Unit, Cambridge, England). In: Aircrew stress in wartime operations. London and New York, Academic Press, 1979, p. 179-218. 13 refs.

Results of a series of laboratory experiments on the nature and causes of pilot error are presented, and the theory is advanced that the tendencies responsible for the errors made in the tests are also responsible for flight errors which lead to accidents. The incidence of pilot errors was studied in the Cambridge Cockpit flight simulator under various conditions of noise, drugs and pilot instructions. The number of errors was observed generally to increase in the first half hour of the test, reach its maximum in the second half hour and then decline, with the duration and size of errors increasing as the test progressed. Errors were attributed to successive overaction, inattention, a specific end effect, preoccupation with one part of the task and perceptual disorganization. Performance was also affected by alcohol, amphetamine, noise, and special instructions describing the types of error to which pilots are liable. The errors encountered are explained as due to variations of anticipatory tension rather than fatigue, and are found to be correlated with the subsequent flight careers of the subjects. A.L.W.

A80-23745 **Deposition of hygroscopic atmospheric aerosol particles in the human respiratory tract.** G. Hänel (Frankfurt, Universität, Frankfurt am Main, West Germany) and J. Heyder (Gesellschaft für Strahlen- und Umweltforschung mbH, Frankfurt am Main, West Germany). *Staub - Reinhaltung der Luft,* vol. 40, Jan. 1980, p. 9-13. 8 refs.

The paper reports on a study in which the total and regional mass deposition and mass deposition rate of hygroscopic atmospheric aerosol particles in the human respiratory tract was calculated for mouth- and nose-breathing. It is assumed that the particles immediately grow to their terminal size when entering the respiratory tract. Among the conclusions is that when the growth of atmospheric particles in the respiratory tract due to water vapor condensation on the particles is neglected, the total mass deposition in under- and alveolar mass deposition is overestimated. M.E.P.

A80-23975 **Effects of exercise training on left ventricular function in normal subjects - A longitudinal study by radionuclide angiography.** S. K. Rerych, P. M. Scholz, D. C. Sabiston, Jr., and R. H. Jones (Duke University, Medical Center, Durham, N.C.). *American Journal of Cardiology,* vol. 45, Feb. 1980, p. 244-252. 39 refs. Grant No. NIH-HL-17670-03.

The influence of physical training on the performance of the left cardiac ventricle in normal subjects is investigated by means of the noninvasive technique of radionuclide angiography. The left ventricular ejection fraction, left ventricular end-diastolic volume, pulmonary transit time, pulmonary blood volume and total body blood volume of 18 normal athletes were determined at rest and during exercise before and after a six-month period of intensive training for competitive swimming. Total body blood volume is found to increase after training, while cardiac output at rest remained similar despite a decrease in heart rate and ejection fraction and an increase in end-diastolic volume. During maximal exercise, the cardiac output is observed to have increased after training due to an increased end-diastolic volume with a constant heart rate and ejection fraction. Individual variations are noted, and it is concluded that the increased cardiac output during maximal exercise results from the ability of the left ventricle to dilate from rest to exercise and to eject fully this further increase in end-diastolic volume at approximately the same heart rate. A.L.W.

A80-23993 # **System design features of the Space Shuttle remote manipulator.** P. Kumar, P. Truss, and C. G. Wagner-Bartak (Spar Aerospace, Ltd., Toronto, Canada). In: World Congress on the Theory of Machines and Mechanisms, 5th, Montreal, Canada, July 8-13, 1979, Proceedings. Volume 1. New York, American Society of Mechanical Engineers, 1979, p. 839-842. 7 refs.

The Space Shuttle Remote Manipulator (RMS) is an anthropomorphic, man-machine system primarily used for deploying and retrieving payloads (satellites, space modules) in orbit. The manipulator arm features a modularized design approach and the use of similar or common components. The data transfer between the various RMS interfaces is handled using a system of digital data busses. The system has been made 'instinctive' by the use of an appropriate control hierarchy which enables the astronaut/operator to simply move the manipulator end point without controlling the individual joints. Safety requirements have been met by incorporateing a back-up system to the principal control modes and a built-in scheme of fault detection and annunciation. The RMS is presently scheduled to be integrated into the orbital flight test program in 1979. (Author)

A80-23996 # **Recursive solution to the equations of motion of an N-link manipulator.** W. W. Armstrong (Montréal, Université, Montreal, Canada). In: World Congress on the Theory of Machines and Mechanisms, 5th, Montreal, Canada, July 8-13, 1979, Proceedings. Volume 2. New York, American Society of Mechanical Engineers, 1979, p. 1343-1346.

The equations of motion of a manipulator formed by a sequence of N rigid links, joined to each other and to a spacecraft or a terrestrial base by hinges which allow up to three rotational degrees of freedom, are solved by a recursive technique which does not involve operations on matrices larger than 3x3. This technique, which has also been generalized to the case of flexible links, has been programmed on a CYBER 173 computer for the development of the Shuttle Remote Manipulator System. (Author)

A80-24026 **Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings.** Edited by C. K. Bensel (U.S. Army, Clothing, Equipment and Materials Engineering Laboratory, Natick, Mass.). Santa Monica, Calif., Human Factors Society, Inc., 1979. 605 p. Members, $15.; nonmembers, $20.

The papers presented at this meeting cover such topics as models of muscle strength regulation, psychological and physiological reactions associated with repetitive tasks, computer systems, consumer products, environmental design, industrial economics, safety, both occupational and transportation, and training. V.P.

A80-24028 * **Operator Station Design System - A computer aided design approach to work station layout.** J. L. Lewis (NASA, Johnson Space Center, Houston, Tex.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 55-58.

The Operator Station Design System is resident in NASA's Johnson Space Center Spacecraft Design Division Performance Laboratory. It includes stand-alone minicomputer hardware and Panel Layout Automated Interactive Design and Crew Station Assessment of Reach software. The data base consists of the Shuttle Transportation System Orbiter Crew Compartment (in part), the Orbiter payload bay and remote manipulator (in part), and various anthropometric populations. The system is utilized to provide panel layouts, assess reach and vision, determine interference and fit problems early in the design phase, study design applications as a function of anthropometric and mission requirements, and to accomplish conceptual design to support advanced study efforts. (Author)

A80-24029 * **Man-machine analysis of translation and work tasks of Skylab films.** W. W. Hosler (General Dynamics Corp., Fort Worth, Tex.), J. G. Boelter (Texas, University, Odessa, Tex.), J. R. Morrow, Jr. (Houston, University, Houston, Tex.), and J. T. Jackson (NASA, Johnson Space Center, Spacecraft Design Div., Houston, Tex.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 59-62. Contract No. NAS9-15521.

An objective approach to determine the concurrent validity of computer-graphic models is real time film analysis. This technique was illustrated through the procedures and results obtained in an evaluation of translation of Skylab mission astronauts. The quantitative analysis was facilitated by the use of an electronic film analyzer, minicomputer, and specifically supportive software. The uses of this technique for human factors research are: (1) validation of theoretical operator models; (2) biokinetic analysis; (3) objective data evaluation; (4) dynamic anthropometry; (5) empirical time-line analysis; and (6) consideration of human variability. Computer assisted techniques for interface design and evaluation have the potential for improving the capability for human factors engineering. (Author)

A80-24031 * **Development of display design and command usage guidelines for Spacelab experiment computer applications.** D. W. Dodson and N. L. Shields, Jr. (Essex Corp., Huntsville, Ala.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 70-74. 9 refs. Contract No. NAS8-32991.

Individual Spacelab experiments are responsible for developing their CRT display formats and interactive command scenarios for payload crew monitoring and control of experiment operations via the Spacelab Data Display System (DDS). In order to enhance crew training and flight operations, it was important to establish some standardization of the crew/experiment interface among different experiments by providing standard methods and techniques for data presentation and experiment commanding via the DDS. In order to establish optimum usage guidelines for the Spacelab DDS, the capabilities and limitations of the hardware and Experiment Computer Operating System design had to be considered. Since the operating system software and hardware design had already been established, the Display and Command Usage Guidelines were constrained to the capabilities of the existing system design. Empirical evaluations were conducted on a DDS simulator to determine optimum operator/system interface utilization of the system capabilities. Display parameters such as information location, display density, data organization, status presentation and dynamic update effects were evaluated in terms of response times and error rates. (Author)

A80-24032 **The design and evaluation of complex systems - Application to a man-machine interface for aerial navigation.** D. B. Beringer (Illinois, University, Urbana, Ill.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 75-79. 9 refs.

Systematic and economic design and evaluation strategies were applied to a computer-generated 4-D aerial navigation system. During the evaluation each of 24 experienced instrument pilots received training in a PLATO-based digital flight simulator using either a keyboard entry/static map, keyboard entry/dynamic map, or touch entry/dynamic map system. Tasks performed during the execution of an area navigation course included continuous flight control, navigation data updating, digital data entry, and amended course plotting. Digital data entry training time was comparable for all three systems but the touch-map proved superior for the plotting tasks, greatly reducing training and task execution times while virtually eliminating errors. Subsequent performance evaluation showed that the touch-map reduced flight path tracking error, increased processing rates on a digit-cancelling secondary task, and increased the accuracy of manual plotting operations. It was concluded that a touch entry system could significantly reduce cockpit workload across a wide range of operational environments. (Author)

A80-24034 **Effect of pretraining criterion on flight simulator and secondary cognitive task performance.** M. Nataupsky, J. C. H. Schwank, E. B. Griggs, K. E. McKay, Jr., and S. D. Schmidt (U.S. Air Force Academy, Colorado Springs, Colo.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 305-309. 7 refs. Contract No. AMD/RDO-78-1.

Twenty-eight United States Air Force Academy cadets were trained in a GAT-1 flight simulator under one of four experimental groups. The groups were defined first by having heading information either provided by the normal heading indicator or by peripheral lights and second by their being trained on either a 5 deg or 10 deg heading deviation criterion. All cadets were subjected to four levels of a secondary cognitive task plus a control condition. There were no significant differences for either the main effect of heading indicator type or criterion level of training. The main effect of cognitive task difficulty level was significant for most measures. In addition, the heading indicator type by training criterion level interaction produced significant differences. Each significant interaction accounted for an average of 19% of the total variance. The study seems to indicate that training criteria are important independent variables in complex psychomotor/cognitive flight simulator tasks. (Author)

A80-24035 **Development and application of a task taxonomy for tactical flying.** R. P. Meyer, J. I. Laveson, G. L. Pape (Design Plus, St. Louis, Mo.), and B. J. Edwards (USAF, Human Resources Laboratory, Williams AFB, Ariz.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 315-319. Contract No. F33615-77-C-0020.

The data base for this taxonomy was obtained from the task analysis of sixteen basic fighter maneuvers. The next step was the development of nine classification rules designed to process these analyses into usable data for the taxonomic system. The taxonomic system allowed the task and skill information within the structure to be sorted, organized, and compared in a variety of combinations which can be useful to the training specialist. The taxonomic system thus permitted a number of applications. Basic skill comparisons were made across tasks and permitted the identification of skill criticality for specific training objectives. The frequency, complexity, and sequencing of specific skills required for various selected maneuvers were also compared and common elements identified. The system was also used to analyze the skills within a given group of tasks in order to design a single standard task which would contain a high percentage of skills identical to those of a given task group. (Author)

A80-24036 **Validation of an in flight performance measurement methodology - F-4 ground attack training evaluation.** B. J. Pierce, J. DeMaio (USAF, Human Resources Laboratory, Williams AFB, Ariz.), and D. Yates (USAF, Luke AFB, Ariz.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 320-323.

Validity and applicability were assessed for a performance measurement methodology developed to evaluate airborne performance on conventional weapon delivery maneuvers. The methodology provides an analysis of pilot performance using a stage-by-stage rating technique. Pilots assigned to an F-4 training squadron served as subjects. Results demonstrated that instructor pilot ratings of the individual stages of the delivery yield a reliable indicator of the quality of performance on that pass. The data address issues regarding which stages of the maneuver were most difficult, which improved most over training, and to what extent this improvement affected performance on the entire delivery. (Author)

A80-24037 **Air combat maneuvering performance measurement.** M. J. Kelly, J. C. Reed (USAF, Human Resources Laboratory, Williams AFB, Ariz.), A. L. Wooldridge, and R. T. Hennessy. In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 324-328.

Due to the complex, dynamic and fast-moving nature of the air combat task, performance assessment during air-to-air combat provides many unique measurement problems. A combined analytical and empirical technical approach was used to develop a candidate measurement structure and algorithm for the measurement of pilot performance during one-versus-one air combat maneuvering. Nearly all of 28 candidate measures were found to discriminate between high and low skilled pilots during free engagements on the Simulator for Air-to-Air Combat. Discriminant analyses provided a measurement algorithm consisting of 13 measures which accounted for 51% of the variance in the performance data and which predicted membership in high or low skill groups with 92% accuracy. (Author)

A80-24038 **The development of objective inflight performance assessment procedures.** J. M. Childs (Canyon Research Group, Inc., Fort Rucker, Ala.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 329-333. 5 refs.

The purpose of this research was to develop procedures for objectively evaluating Initial Entry Rotary Wing (IERW) student performance in flight. Maneuvers of the Basic Instrument phase were addressed. Descriptive inflight scoring procedures to assess absolute deviations of desired values from observed values at designated times, were developed. Desired values were determined on the basis of the rates specified in IERW training guides. Observed values were instrument indications of airspeed, altitude, or heating at those times. Four tolerance categories were incorporated into alternative six-point maneuver scoring algorithms designed to assess aircraft control precision. The criterion for acceptable proficiency was the maintenance of each sampled measure within standard IERW tolerance limits for each sampling point of a maneuver. Tests of the objective scoring procedures were conducted in the UH-1 flight simulator. (Author)

A80-24039 **Actual vs simulated equipment for aircraft maintenance training - Cost implications of the incremental vs the unique device.** R. E. Vesterwig and F. T. Eggemeier (USAF, Human Resources Laboratory, Wright-Patterson AFB, Ohio). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 334-338. 9 refs.

Life cycle cost estimates were developed for use of simulated test equipment vs actual test equipment in a maintenance training program of the type used for current advanced fighter aircraft. Previous lift cycle cost comparisons had not explicitly considered the cost implications of procurement and support of a unique training device vs an incremental device. This effort included the unique vs the incremental device factor. Total estimated fifteen year costs for simulated equipment trainers were significantly lower than comparable estimates for actual equipment trainers. The results indicate that the cost implications of a unique device vs an incremental device are important determinants of both acquisition and support cost estimates and should be considered fully in future life cycle costing efforts. (Author)

A80-24040 **The effect of image quality on search for static and dynamic targets - MTFA-performance correlations.** J. C. Gutmann, H. L. Snyder, W. W. Farley, and J. E. Evans, III (Virginia Polytechnic Institute and State University, Blacksburg, Va.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings.
Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 339-343. 6 refs.

This report contains the results of two experiments which investigated the effects of the quality of a televised image on eye movements and search-related measures. The first experimental search task involved having subjects perform an air-to-ground search during a simulated flight. The quality of the image presented was varied by either passing, low-pass filtering, or attenuating the video signal and by adding electrical white noise to the video signal. Low to moderate correlations between modulation transfer function area (MTFA) and performance measures generally indicated that as MTFA increases performance improves and fixation durations decrease. The search task of the second experiment consisted of having the subjects search for a designated letter or numeral across a televised picture of randomly positioned letters and numerals. The quality of the picture was varied by either passing, low-pass filtering, high-pass filtering, or attenuating the video signal and by adding electrical white noise to the video signal. Correlations between MTFA and performance measures indicated that increases in MTFA lead to decreases in search time and decreases in fixation duration. (Author)

A80-24041 **Operator visual workload shifts as a function of vehicle stability.** R. R. Simmons and K. A. Kimball (U.S. Army, Aeromedical Research Laboratory, Fort Rucker, Ala.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 352-356.

This research was initiated to compare the visual performance/workload of pilots during fixed wing and rotary wing flights. The corneal reflection technique was used to obtain the visual data. The results demonstrate that visual performance/workload of the pilots was different for each aircraft. Because the major difference between the aircraft was the aerodynamic stability, it was assumed that the visual workload was in fact a function of aircraft stability. The overall purpose of such research has been to provide information concerning pilots' visual requirements for safe mission accomplishment. (Author)

A80-24042 * **Evaluation of a pilot workload metric for simulated VTOL landing tasks.** R. A. North and K. Graffunder (Honeywell Systems and Research Center, Minneapolis, Minn.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings.
Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 357-361. Contract No. NAS1-15081.

A methodological approach to measuring workload was investigated for evaluation of new concepts in VTOL aircraft displays. Multivariate discriminant functions were formed from conventional flight performance and/or visual response variables to maximize detection of experimental differences. The flight performance variable discriminant showed maximum differentiation between crosswind conditions. The visual response measure discriminant maximized differences between fixed vs. motion base conditions and experimental displays. Physiological variables were used to attempt to predict the discriminant function values for each subject/condition/trial. The weights of the physiological variables in these equations showed agreement with previous studies. High muscle tension, light but irregular breathing patterns, and higher heart rate with low amplitude all produced higher scores on this scale and thus, represented higher workload levels. (Author)

A80-24043 **A review of literature relating to visual fatigue.** W. J. Smith (IBM Human Factors Center, San Jose, Calif.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings.
Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 362-366. 39 refs.

The design of workstations with visual displays has become the subject of considerable interest and concern during the past few years. One area of concern relates to the assumption that long term viewing of such displays at close focal distances may contribute to visual fatigue. A second is the effect on the human visual system of the frequent changes in surface illumination associated with display units used in combination with hard copy documents. As a consequence of these and other concerns, the popular press has published articles that have aroused the interest of various scientific organizations regarding the subject of these effects. This paper discusses a review of some of the literature regarding a limited aspect of this issue, namely the accommodation and pupillary systems as they relate to long term viewing of visual display units. (Author)

A80-24044 **Visual search and color coding.** R. C. Carter, Jr. (Pennsylvania State University, University Park, Pa.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 369-373. 10 refs.

Several experiments were conducted to investigate the effects on search time of display and personnel characteristics. Search time increased by an order of magnitude when the number of display items of the target's color increased from one to the display density. Items not of the target's color affected search time to the extent that their color was similar to that of the target. The similarity of the colors was found to be well represented by a color difference calculation. The distribution on the display of target-colored items also affected search time. Personnel characteristics, including several measures of ability and experience, were unrelated to search speed. (Author)

A80-24045 **The use of color-coded symbols in a highly dense situation display.** C. J. Kopala (USAF, Flight Dynamics Laboratory, Wright-Patterson AFB, Ohio). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 397-401. 11 refs.

The effectiveness of redundant color-coding for displays used by highly-loaded operators performing a series of complex tasks has never been clearly demonstrated. Pilot flight performance and threat recognition performance using two coding conditions for a threat display were compared in a simulated mission. One coding condition consisted of shape-coded symbols, the other of symbols that were both color- and shape-coded. Redundant color-coding was found to significantly reduce both response time and error rate. (Author)

A80-24046 **Peripheral vision and tracking performance under stress.** J. M. Bermudez, D. A. Harris, and J. C. H. Schwank. In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings.
Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 402-406. 7 refs. Contract No. AMD/RDO-78-1.

The complexity of modern aircraft systems places substantial information processing loads on the pilot, which are excerbated during emergency landings and other high-stress situations. Psychological and behavioral evidence for two human visual systems that may differ in susceptibility to psychological stress suggests the possibility of a natural stress-resistant information channel that could be used for information input during high-stress situations. It follows that the extreme peripheral visual fields could be a possible location for adjunct visual displays intended to orient the pilot's focal vision and attention to critical instrument displays during emergency situations. In the present paper, data are examined concerning the effects of three types of instrument display, used under varying levels of stress during a simulated instrument landing. Focal viewing was found to be more sensitive to information about pitch, whereas peripheral viewing was more sensitive to information about roll. V.P.

A80-24047 **Perturbation of induced rotation as an index of pattern structure.** F. Ward, T. Dingus, J. Dingus, R. Jones, and G. Palmer (Wright State University, Dayton, Ohio). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 407-410. 9 refs.

The paper deals with a methodology where the smoothness of induced rotation is used to quantify the organizational structure of geometric figures. Tests with human subjects showed that the amount of texturing has a strong effect on perceived rotation. For all presentation times, an increase in texture density produced a decrease in the threshold to detect perturbation of rotation for the planar rotation condition. For depth rotation, presentation times of 80 and 100 msec revealed the same effect. V.P.

A80-24048 **Prediction and quickening in perspective flight displays for curved landing approaches.** R. S. Jensen (Illinois, University, Champaign, Ill.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 498-502. 8 refs.

In an empirical test of various predictor and quickened display algorithms eighteen professional pilot-subjects made four curved-path landing approaches in a Gat-2 simulator using each of 14 dynamically different display configurations in a within-subject design. Results indicate that second- and third-order predictor displays provide the best lateral performance. Intermediate levels of prediction and quickening provide best vertical control. Predictor-quickening algorithms of increasing computational order significantly reduce aileron, rudder, and elevator control responses, reflecting successive reductions in cockpit workload. Whereas conventional crosspointer displays are not adequate for curved landing approaches, perspective displays with predictors and some vertical dimension quickening are highly effective. (Author)

A80-24049 **Utilization of energy maneuverability data in improving in-flight performance and performance in air combat maneuvering.** W. F. Moroney (U.S. Naval Postgraduate School, Monterey, Calif.), R. Pruitt (McDonnell Aircraft Co., St. Louis, Mo.), and C. Lau (U.S. Navy, Pacific Missile Test Center, Point Mugu, Calif.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 503-507.

Energy maneuverability (EM) has been defined as the ability to perform a change, or a combination of changes, in direction, altitude, and airspeed expressed in terms of energy and energy rate. In the present paper, two situations are described in which EM data were presented to pilots in an analog format on a helmet-mounted display in an effort to improve their ability to maximize the performance of their aircraft. From the tests, this new format may be expected to provide a better means for pilots to determine how well they have maximized aircraft performance. V.P.

A80-24050 **Data analysis methodology for day/night inflight tactical navigation.** E. M. Connelly, R. F. Comeau (Performance Measurement Associates, Inc., Vienna, Va.), G. L. Holman, and J. A. Bynum (U.S. Army, Army Research Institute, Fort Rucker, Ala.). In: Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings. Santa Monica, Calif., Human Factors Society, Inc., 1979, p. 563-567. Grant No. DAHC19-77-C-0042.

Nap-of-the-earth helicopter navigation, both at night and during the day, is essential to the Army's mission. Navigation performance, defined as the probability of navigating along a prescribed route or route segment without deviation, is a function of many factors including map and terrain types. Determination of the effects of these factors is important information for predicting performance of Army navigators, identifying factors critical to navigation, evaluating the probability of navigation success along a route and developing training aids. The purpose of the research work reported here was to analyze NOE flight experiment data to develop that information. This paper contains results from analyses of helicopter NOE navigation data to determine the probability of navigation success along a route as a function of terrain type, to develop a means of determining route difficulty, and to develop a method of scoring student performance. A80-24135 **Vector model for normal and dichromatic color vision.** S. L. Guth, T. Benzschawel (Indiana University, Bloomington, Ind.), and R. W. Massof (Johns Hopkins University, Baltimore, Md.). *Optical Society of America, Journal*, vol. 70, Feb. 1980, p. 197-212. 46 refs. NSF Grants No. GB-40516; No. BNS-77-17299.

The inclusion of cone mechanisms in a slightly revised version of an earlier model allows accounts of phenomena that involve receptor effects as well as dichromatic color vision. Intensity-dependent parameters that simulate the adaptation of receptors and opponent and nonopponent mechanisms are varied to predict a wide range of data for both normals and dichromats, including: (1) color matching; (2) the approximate apparent hue and saturation of the spectrum; (3) foveal spectral sensitivities obtained by flicker photometry and by detection in the dark and under conditions of achromatic or chromatic adaptation; (4) heterochromatic additivity failures in the dark-adapted and chromatically adapted eye; (5) approximate differences between brightness and luminance; and, (6) color and wavelength discrimination under varying adaptation conditions. (Author)

A80-24136 **Large color differences and the geometry of Munsell color space.** E. W. Farmer, R. M. Taylor, and A. J. Belyavin (RAF, Institute of Aviation Medicine, Farnborough, Hants, England). *Optical Society of America, Journal*, vol. 70, Feb. 1980, p. 243-245. 16 refs.

In the Munsell system, colors are rperesented as points, and color differences as the distances between points in a cylindrical space defined by a vertical axis of value (lightness) and radial and circular axes of chroma (saturation) and hue, respectively. The paper describes an experiment conducted to examine the psychological validity of this scheme and of the assumption that color space conforms to Euclidean geometry. Multidimensional scaling was applied to a set of colors, encompassing a wide range of variations in all three Munsell attributes. Twenty subjects judged the similarity of 153 color pairs, and subjective estimates were pooled to produce a single value for each color pair. The total negative variance was only 1.9% of the total positive variance, and the obtained three-dimensional configuration concurred with the postulated organization of Munsell color space. It was concluded that meaningful subjective estimates of color similarity can be obtained for samples widely separated in color space. However, it is noted that a weighting constant has to be introduced to control step-size inequality between attributes; the ratio of step sizes along the value and chroma axes was calculated to be 1:3.76. A80-24265 * **Optimal estimator model for human spatial orientation.** J. Borah (G & W Applied Science Laboratories, Waltham, Mass.), L. R. Young (MIT, Cambridge, Mass.), and R. E. Curry (NASA, Ames Research Center, Moffett Field, Calif.). In: Joint Automatic Control Conference, Denver, Colo., June 17-21, 1979, Proceedings. New York, American Institute of Chemical Engineers, 1979, p. 800-805. 17 refs. Contract No. F33615-76-C-0039.

A model is being developed to predict pilot dynamic spatial orientation in response to multisensory stimuli. Motion stimuli are first processed by dynamic models of the visual, vestibular, tactile, and proprioceptive sensors. Central nervous system function is then modeled as a steady-state Kalman filter which blends information from the various sensors to form an estimate of spatial orientation. Where necessary, this linear central estimator has been augmented with nonlinear elements to reflect more accurately some highly nonlinear human response characteristics. Computer implementation of the model has shown agreement with several important qualitative characteristics of human spatial orientation, and it is felt that with further modification and additional experimental data the model can be improved and extended. Possible means are described for extending the model to better represent the active pilot with varying skill and work load levels. (Author)

A80-24347 **Cardiograms: Theory and applications.** Edited by D. N. Ghista, E. Van Vollenhoven (Delft, Technische Hogeschool, Delft, Netherlands), W.-J. Yang, and H. Reul. Basel, S. Karger AG (Advances in Cardiovascular Physics. Volume 2), 1979. 168 p. $58.75.

The work focuses on the theory and application of magnetocardiography, phonocardiography and its instrumentation, and ballistocardiography. The electrocardiogram and magnetocardiogram are discussed along with the electric and magnetic heart vectors, the vector magnetocardiography instrumentation, and its clinical applications; phonocardiography, the nature of cardiovascular sound, the phonocardiograph, the different types of microphones, and the use of spectral phonocardiography are described; finally, the principles, simulation, and applications of ballistocardiography are analyzed together with its analog and digital models. A.T.

A80-24348 **The theory and application of magnetocardiography.** J. P. Wikswo, Jr., J. A. V. Malmivuo, W. H. Barry, M. C. Leifer, and W. M. Fairbank (Stanford University, Stanford, Calif.). In: Cardiograms: Theory and applications. Basel, S. Karger AG, 1979, p. 1-67. 85 refs. NSF Grant No. APR-72-03447-A04.

The similarities and differences between the electrocardiogram and magnetocardiogram which are recordings of the electric and magnetic fields associated with cardiac electrical activity are discussed. The information content of the two signals is assessed using the electric and magnetic heart vectors, showing that more information regarding the cardiac current source distribution can be obtained from measurement of these vectors than from either measurement alone. It is concluded that magnetocardiography can be a valuable addition to the existing clinical techniques. A.T.

A80-24349 **Phonocardiography - Analyses of instrumentation, and vibration of heart structures to determine their constitutive properties.** E. Van Vollenhoven, N. Suzumura, D. N. Ghista, J. Mazumdar, and T. Hearn (Delft, Technische Hogeschool, Delft, Netherlands; Nagoya Institute of Technology, Nagoya, Japan; U.S. Veterans Administration Hospital, Palo Alto, Calif.; Adelaide, University, Adelaide, Australia). In: Cardiograms: Theory and applications. Basel, S. Karger AG, 1979, p. 68-118. 59 refs.

The paper presents guidelines for standardization of phonocardiography which provides a record of the vibrations of the chest wall originating from the heart. It provides (1) the theory of contact and air microphones, (2) experimental methods of their calibration, and (3) mathematical models of vibrations of cardiac structures. For the overall frequency response of the phonocardiograph, the microphone frequency from the chest wall is combined with the frequency responses of filters and the recording unit to enable determination of the normal-pathological ranges of their constitutive properties. Finally, the constitutive properties of the left ventricular chamber and the mitral valve leaflet are derived in terms of their size parameters. A.T.

A80-24350 **Ballistocardiography - Principles, simulation, applications.** I. Tomak (Acadia University, Wolfville, Nova Scotia, Canada). In: Cardiograms: Theory and applications. Basel, S. Karger AG, 1979, p. 119-157. 32 refs.

The principle and applications of the ballistocardiogram (BCG) and of the air-supported equipment for its recording are described. A discussion of a time domain electrical analog of the blood circulation capable of BCG simulation is followed by a presentation of a frequency domain digital model of the same system. An analytical model is constructed which considers the effects of heart motion, varying blood volumes in the heart chambers, and the reaction forces due to the surrounding tissues. Finally, BCG applications are discussed and compared with other techniques. A.T.

A80-24492 * **Thermal history, chemical composition and relationship of comets to the origin of life.** W. M. Irvine (Massachusetts, University, Amherst, Mass.; Onsala Space Observatory, Goteborg, Sweden), S. B. Leschine, and F. P. Schloerb (Massachusetts, University, Amherst, Mass.). *Nature*, vol. 283, Feb. 21, 1980, p. 748, 749. 47 refs. Grant No. NGL-22-010-023.

The role of thermal processes in determining the chemical composition of comets is considered, and implications of possible cometary constituents for the origin and evolution of life on earth are discussed. It is shown that the inclusion of short-lived Al-26 from a nearby supernova explosion into cometary nuclei could lead to comets with surfaces cool enough to retain H2O and interiors warm enough for thermal processing to occur, with the production of complex organic molecules such as amino acids and nucleic acid bases. It is thus suggested that comets may have played a part in seeding the primitive earth with biological polymers capable of self-replication or of evolving towards that capability, and may even be responsible for the subsequent introduction of organic material capable of infecting already existing cells. A.L.W.

A80-24525 **Aviation medicine. Volume 1 - Physiology and human factors.** Edited by G. Dhenin (RAF, London, England). London, Tri-Med Books, Ltd., 1978. 790 p. $41.40.

The book discusses the physiological and psychological aspects of human responses to flight stresses and the principles used in the protection of man from the hostile environment of flight. Consideration is given to changes of pressure, long- and short-duration acceleration including vibration and temperature extremes encountered in flying. The effects of each stress on normal performance, human tolerances to each stress and the physiological and psychological procedures used to minimize the impairment of performance due to each stress are presented. The effects of flight on vision, hearing and spatial orientation are also discussed, and the effects of irregular sleep and work schedules are considered. The psychology of flight tasks and training is also examined, and the medical aspects of helicopter, VTOL and SST flight and manned space flight are indicated. A.L.W.

WHOLE-BODY VIBRATION OF HEAVY EQUIPMENT OPERATORS
D. E. Wasserman, W. C. Asburry, and T. E. Doyle *In* Shock and Vibration Inform. Center The Shock and Vibration Bull., Pt. 2 Sep. 1979 p 47-68 refs

Avail: NTIS HC A10/MF A01 CSCL 05H

A vibration field study was made of workers operating track-type tractors, scrapers, motor graders, loaders, backhoes, compactors, skidders, and dump trucks. Vibration data were obtained from the vehicle floor and manseat interface, as well as from the operator's knee, shoulder, and head. The vibration spectrum analysis indicates that for the different types of machines little difference could be attributed to the experience or body mass of the operator and that most of the higher level vibration occurred below the 4 to 8 Hz human body resonance band, much of it at less than 1 Hz. RESEARCH RELATED TO THE EXPANSION AND IMPROVEMENT OF HUMAN VIBRATION EXPOSURE CRITERIA

Richard W. Shoenberger *In* Shock and Vibration Inform. Center The Shock and Vibration Bull., Pt. 2 Sep. 1979 p 69-79 refs

Avail: NTIS HC A10/MF A01 CSCL 05H

A psychophysical matching technique was used to investigate the perceived intensity of various types of vibration environments. Comparisons of sinusoidal and nonsinusoidal vibrations as well as comparisons of translational and angular vibrations were conducted. Results discriminate between alternate methods for evaluating the severity of nonsinusoidal vibrations and indicate relationships between translational and angular vibrations needed for the expansion of vibration criteria to include angular motions. A method and apparatus for removing porphyrins from a fluid sample which are unrelated to the number of bacteria present in the sample and prior to combining the sample with luminol reagent to produce a light reaction is disclosed. The method involves a pre-incubation of the sample with a dilute concentration of hydrogen peroxide which inactivates the interfering soluble porphyrins. Further, by delaying taking a light measurement for a predetermined time period after combining the hydrogen peroxide-treated water sample with a luminol reagent, the luminescence produced by the reaction of the luminol reagent with ions present in the solution, being short lived, will have died out so that only porphyrins within the bacteria which have been released by rupturing the cells with the sodium hydroxide in the luminol reagent, will be measured. The measurement thus obtained can then be related to the concentration of live and dead bacteria in the fluid sample.

FACTORS INFLUENCING SPECIFIC GROWTH RATES AND SEASONAL ABUNDANCE OF EUTROPHIC LAKE PHYTOPLANKTON Ph.D. Thesis
Gary Frank Marx 1979 94 p
Avail: Univ. Microfilms Order No. 8001561

The seasonal succession of dominant phytoplankton populations and the daily concentrations of major nutrients in a central Michigan waste treatment basin were monitored over the 1977 growing season in order to study the factors controlling the growth of the various species. Carbon and light attenuation due to large algal standing crops, as well as the availability of dissolved organic substances, seemed to be the major factors controlling annual algal productivity. While a simple, kinetics based model was not be able to accurately predict the weekly specific growth rates of the various species, predictions of approximate periods of growth were quite accurate, making such a model of considerable value for practical use. Dissert. Abstr.

THEORETICAL STUDIES OF THE LIGHT REACTIONS IN PHOTOSYNTHESIS Ph.D. Thesis
Richard Adam Friesner 1979 193 p
Avail: Univ. Microfilms Order No. 8000347

Using magnetic resonance formalism and theoretical formulations to interpret electron paramagnetic resonance (EPR) spectra the light reactions of photosynthesis were studied. A general method of determining the orientational distribution function of a partially ordered ensemble of paramagnetic systems from its EPR lineshape is presented. A radical pair theory of spin polarization for systems of membrane bound radicals with anisotropic g tensors is developed, and used to explain the orientation dependence of the lineshape of the polarized signal. The electron transport cofactors involved in the photosynthetic light reactions in both green plants and photosynthetic bacteria are identified. Dissert. Abstr.

GLUCOSE METABOLISM IN DIFFERENT REGIONS OF THE RAT BRAIN UNDER HYPOKINETIC STRESS INFLUENCE
K. Konitzer (Acad. of Sci. of the Ger. Democratic Republic) and S. Voigt (Acad. of Sci. of the Ger. Democratic Republic) Jan. 1980 15 p refs Transl. into ENGLISH from Acta Biol. Med. Ger. (East Germany), v. 35, 1976 p 853-866 Transl. by Kanner (Leo) Associates, Redwood City, California
(NASA-TM-75949) Avail: NTIS HC A02/MF A01 CSCL 06C

Glucose metabolism in rats kept under long term hypokinetic stress was studied in 7 brain regions. Determination was made of the regional levels of glucose, lactate, glutamate, glutamine, aspartate, gamma-aminobutyrate and the incorporation of C-14 from plasma glucose into these metabolites, in glycogen and protein. From the content and activity data the regional glucose flux was approximated quantitatively. Under normal conditions the activity gradient cortex and frontal pole cerebellum, thalamus and mesencephalon, hypothalamus and pons and medulla is identical with that of the regional blood supply (measured with I131 serum albumin as the blood marker). Within the first days of immobilization a functional hypoxia occurred in all brain regions and the utilization of cycle amino acids for protein synthesis was strongly diminished. After the first week of stress the capillary volumes of all regions increased, aerobic glucose metabolism was enhanced (factors 1.3 - 2.0) and the incorporation of glucose C-14 via cycle amino acids into protein was considerably potentiated. The metabolic parameters normalized between the 7th and 11th week of stress. Blood supply and metabolic rate increased most in the hypothalamus. R.C.T.

MORPHOLOGICAL AND FUNCTIONAL MANIFESTATIONS OF RAT ADRENAL-CORTEX RESPONSE TO SODIUM BROMIDE ADMINISTRATION UNDER HYPODYNAMIC STRESS
L. T. Kirichek (Kharkov Med. Inst.) and V. I. Zholudeva (Kharkov Med. Inst.) Nov. 1979 12 p refs Transl. into ENGLISH from Farmakol. Toksikol. (USSR), v. 38, no. 6, Nov. - Dec. 1975 p 703-706 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-7593) Avail: NTIS HC A02/MF A01 CSCL 05C

Functional and morphological manifestations of adrenal cortex response to hypodynamia (2-hr immobilization on an operating table) under the influence of bromine preparations were studied. The sodium bromide was administered intraperitoneally in 100, 250, and 500 mg/kg doses once and repeatedly during ten days. The adrenal gland was evaluated functionally by ascorbic acid and cholesterol content and morphologically by coloring it with hematoxylin-eosin and Sudans for lipid revealing at freezing. Results are displayed in two tables and microphotographs. They are summarized as follows: the bromine weakens the functional state of the adrenal cortex in intact rats, causing changes similar to those under stress. During immobilization combined with preliminary bromine administration, a less pronounced stress reaction is noticeable. R.C.T.

(NASA-TM-76000) Avail: NTIS HC A02/MF A01 CSCL 06C

The dynamics of catecholamine content and myocardial contractile function during hypodynamia were studied in 109 white rats whose motor activity was severely restricted for up to 30 days. During the first five days myocardial catecholamine content, contractile function, and physical load tolerance decreased. Small doses of thyroidin counteracted this tendency. After 15 days, noradrenalin content and other indices approached normal levels and, after 30 days, were the same as control levels, although cardiac functional reserve was decreased. Thyroidin administration after 15 days had no noticeable effect. A detailed table shows changes in 17 indices of myocardial contractile function during hypodynamia. K.L.

INFLUENCE OF X IRRADIATION AND DIET ON PITUITARY/THYROID FUNCTION IN THE RAT M.S. Thesis
I. G. Qassar 1979 59 p refs
(Contract EY-76-C-02-3490)
(UR-3490-1674) Avail: NTIS HC A04/MF A01

Rats were maintained on low iodine diet or treated with T sub 4. A significant increase in thyroid weight was observed in rats on low iodine diet whereas among rats on normal diet with thyroxine injections, the thyroid was lower in weight than thyroids of control animals. Pituitary weight increased significantly in rats on low iodine diet or T sub 4 treatment. Where PTU was administered to rats pretreated with either normal diet, normal diet plus T sub 4, or maintained on low iodine diet and then exposed to radiation (100 to 400R) to the neck, it was not possible to distinguish the effect of such local radiation on body growth. Contrary to low iodine treatment, administration of PTU did not result in any increase in pituitary weight in rats maintained on normal diet prior to radiation or in rats maintained on low iodine diet prior to radiation. There was, however, a significant increase in pituitary weight in rats injected with thyroxine prior to radiation (250R or 400R). DOE

With the use of a thermocouple and mirror galvanometer, calibrated before the experiment and after each test, it was found that the normal temperature in the esophagus is 0.1-0.4 C higher than in the oral cavity, the temperature in the duodenum is somewhat less than in the stomach, but higher with cholecystitis, duodenitis or gastritis, the temperature in the normal stomach equals or is somewhat higher than in the esophagus, and that the temperature of distended stomachs frequently is lower than in the esophagus. It was found that hot water is retained in the stomach longer than cold water, and that both hot and cold water are allowed to pass into the duodenum when the water temperature becomes approximately equal to that of the surrounding organs. EMPIRICAL BAYES ESTIMATION OF CRITICAL DOSAGES HAVING SMALLEST PREDICTIVE RISK

Ora Bialik and S. Zacks 15 Aug. 1979 20 p refs Prepared in cooperation with Pennsylvania Univ.
(Contract N00014-75-C-0529; NR Proj. 042-276)
(AD-A074376; TR-38) Avail: NTIS HC A02/MF A01 CSCL 12/1

An empirical Bayes procedure is developed for the estimation of critical dosages in the linear regression case. The empirical Bayes procedure provides consistant estimators of the prior parameters when a large number of independent repetitions of the experiment is available. The methodology is developed to analyze a large set of photodynamic bioassays, for the determination of critical air concentrations of benzo-soluble organic extracts. R.E.S.

BIOLOGICAL EFFECTS OF HIGH-VOLTAGE ELECTRIC FIELDS. VOLUME 1: AN UPDATE Final Report

Jul. 1979 224 p refs
(EPRI Proj. 857-1)
(EPRI-EA-1123) Avail: NTIS HC A10/MF A01

Literature which has become available since mid-1974 on the subject of biological effects of power frequency electric fields was reviewed. Some 2000 new entries of both publications and research programs in progress were identified through a computer-aided literature search. Approximately 50 of these entries are discussed. The general findings of this update confirm the conclusion that it is highly improbable that electric fields from transmission lines have any significant biological effects on healthy individuals who encounter such fields in a normal way under ordinary conditions. However, further research is still needed in order to understand the nature and extent of any effects that could be harmful. DOE

DEVELOPMENT OF PERCUTANEOUS ENERGY TRANSMISSION SYSTEMS Annual Report, 15 Aug. 1978 - 14 Aug. 1979

A. Kantrowitz, P. S. Freed, A. A. Ciarkowski, F. L. Vaughan (Michigan Univ.), J. I. VeShancey (Michigan Univ.), R. Gray (Michigan Univ.), R. Brabec (Michigan Univ.), and I. Bernstein (Michigan Univ.) 16 Apr. 1979 70 p refs Sponsored in part by National Heart and Lung Inst., Bethesda
(Contract N01-HV-8-2921)
(PB-299739/3; NIH-N01-HV-8-2921-1) Avail: NTIS HC A04/MF A01 CSCL 06B

The initial development of a percutaneous access device is presented. Selected materials were tested for their ability to support cell growth and nutrients were examined for optimizing cell growth and collagen production. To protect the tissue-implant seal from mechanical stresses, alternative surgical techniques were employed to implant a subcutaneous flange. After implanting a flange in a Yucatan miniature pig, forces were applied to the tissue-implant composite. Strain data indicate (1) good fibrotic bonding occurs between the tissue and the implant, and (2) stabilization of the flange with respect to the adjacent dermis. GRA

DEVELOPMENT OF PRECUTANEOUS ENERGY TRANSMISSION Annual Progress Report, Aug. 1978 - Mar. 1979

Benedict D. T. Daly, Michael Szycher, Michael Worthington, Fred W. Quimby, and Roger G. Warren Apr. 1979 195 p refs
(Contract N01-HV-8-2919)
(PB-300518/6; NIH-N01-HV-8-2919-1) Avail: NTIS HC A09/MF A01 CSCL 06B

A composite percutaneous energy transmission system designed to transmit energy to intracorporeal blood pumps were developed. The system contains five basic components. A carbon coated titanium flange at the level of the skin to provide a non-reactive surface to promote superficial sinus development. Below this level is a porous polytetrafluoroethylene (PTFE) surface bonded to a polyurethane tube. This PTFE extends onto a radially rigid, vertically flexible polyurethane skirt. Below the skirt is a polyurethane tube with a preformed bend. The remainder of the skirt and tube are coated with Dacron fibrils. The PTFE is designed to promote collagen ingrowth to inhibit epithelial downgrowth. The Dacron velour promotes bonding in depper tissues. GRA

IMPLANTED ENERGY CONVERSION SYSTEM Annual Report, 1 May 1978 - 1 Mar. 1979
R. P. Johnston, A. Bennett, S. G. Emigh, D. H. Gray, J. R. Noble et al Aug. 1979 491 p refs
(Contract N01-HV-4-2901)
(PB80-101116; JCGS-7908/217; NIH-N01-HV-4-2901-6)
Avail: NTIS HC A21/MF A01 CSCL 06L

The JCGS thermal energy converter program objective is to develop clinically useful permanently implantable Stirling/hydraulic power sources to operate heart-assist or full-heart replacement blood pumps. The energy source is heat from an electric heater or from a radioisotope which could provide complete system implantability. Development has progressed through seven system configurations. Stirling Engine 5 has accumulated 6.3 years of operating time and has demonstrated 4.1 years of maintenance-free operation before failure. The short-stroke pump actuator/controller on accelerated life test has demonstrated 6.6 equivalent years of maintenance-free life without failure and accumulated a total of 16.5 equivalent years of operation. System 5 in-vivo test demonstrated circulation of all systemic blood flow throughout 175-hour test. System 6 complete power source demonstrated 15.5 percent efficiency, 1.2 liter volume, and 2.4 kg weight. System 7 engine module has demonstrated 20.1 percent efficiency with 0.2 liter volume and 0.7 kg weight. GRA

MODELING PILOT RESPONSE DELAYS TO BEACON COLLISION AVOIDANCE SYSTEM COMMANDS Final Report, Jul. - Sep. 1977
B. Billmann, T. Morgan, and J. Windle Oct. 1979 34 p refs
(FAA Proj. 052-241-310)
(AD-A075946; FAA-RD-79-74; FAA-NA-79-19) Avail: NTIS HC A03/MF A01 CSCL 05/10

Pilot response delays to collision avoidance commands displayed in the cockpit of a General Aviation Trainer simulator were analyzed. For fixed geometries, velocities, and aircraft response rates, the separation at the point of closest approach between aircraft responsing to collision avoidance system (CAS) commands, is inversely related to the length of pilot delay in responding to the CAS command. The Gamma distribution was the best distribution for approximating the empirical data in terms of minimum error mean square, lack of bias, and uniformity of fit. K.L.

A STUDY OF OCCUPATIONAL HEAT STRESS BY ANALYSIS OF ENVIRONMENTAL AND HUMAN FACTORS Ph.D. Thesis
David Jefferson Calley 1979 289 p
Avail: Univ. Microfilms Order No. 7927487

The environmental and physiological aspects related to workmen in a hot production process in the warm and humid Gulf Coast region of the United States are described. Heat stress and strain was investigated in terms of three heat stress indices, the heat stress index, the wet bulb globe temperature, and the wet globe temperature. Correlation coefficients between these indices are discussed. In addition, medical data and clinical chemistry of blood and urine among workmen with heat illness was investigated. Recommendations were made for prevention of heat illness and for the use of heat stress indices. Precautions were stated related to the work-rest ratios and the estimation and measurement of metabolism and allowable exposure times. Dissert. Abstr.

N80-16736 Ohio State Univ., Columbus.
PLANAR BIPED DYNAMICS AND CONTROL Ph.D. Thesis
Andrew Zbigniew Ceranowicz 1979 196 p
Avail: Univ. Microfilms Order No. 8001704

Linear feedback was used to control the motion of a mathematical biped model composed of five rigid links connected by ideal torque actuators at pin joints and constrained to move only in the sagittal plane. The equations of motion for the biped model and support equations, which describe the contact between the supporting surface and the feet of the biped, are presented. These equations can be solved simultaneously for the biped's accelerations and ground reaction forces once the dynamic state and control torques are known. For point feet and a hard flat horizontal support surface, there are nine possible sets of support equations, i.e., support phases. Finding the correct support phase for any control torques and dynamic state is discussed. These ideas were implemented in the simulation of walking which required the transition between three support phases. Dissert. Abstr.

MULTI-MODAL INFORMATION PROCESSING FOR VISUAL WORKLOAD RELIEF
Michael W. Burke, Richard D. Gilson, and Richard J. Jagacinski 1980 28 p refs
(Grant NsG-2179)
(NASA-CR-162720) Avail: NTIS HC A03/MF A01 CSCL 05H

The simultaneous performance of two single-dimensional compensatory tracking tasks, one with the left hand and one with the right hand, is discussed. The tracking performed with the left hand was considered the primary task and was performed with a visual display or a quickened kinesthetic-tactual (KT) display. The right-handed tracking was considered the secondary task and was carried out only with a visual display. Although the two primary task displays had afforded equivalent performance in a critical tracking task performed alone, in the dual-task situation the quickened KT primary display resulted in superior secondary visual task performance. Comparisons of various combinations of primary and secondary visual displays in integrated or separated formats indicate that the superiority of the quickened KT display is not simply due to the elimination of visual scanning. Additional testing indicated that quickening per se also is not the immediate cause of the observed KT superiority. R.E.S.

Fatigue life comparisons of candidate elastomers for use in the artificial heart were made under various conditions. These include: (1) cyclical, progressively increasing, uniaxial strain in air, saline, and in-vitro blood media; (2) progressive uniaxial strain in the same media, with prior cut-growth initiation of samples; and (3) cyclical, biaxial strain in an air environment, accelerated by introduction of various stress concentrators in the samples. Materials evaluated were NBS butyl rubber, Upjohn Pellethane, Goodyear Hexsyn, and Thoratec Biomer. The order of ranking of fatigue lifetime was not the same for the tests cited, and the mode of failure differed for filled (butyl rubber, Hexsyn) and unfilled elastomers. GRA

Forty commercially available laser protective eyewear materials and ten representative frames were evaluated under non-stress and stress conditions. Parameters such as optical density, spectral transmission, luminous transmittance, refractive and prismatic effects haze, and impact resistance were determined and, where possible, compared to recommended criteria for occupational eye and face protection. In addition, all materials were subjected to shelf-life, environmental, and laser-induced damage tests to determine damage limits and characteristics. GRA

INTERACTION OF ELECTROMAGNETIC FIELDS WITH HETEROGENEOUS BIOLOGICAL SYSTEMS Ph.D. Thesis
Sutus Rukspollmuang 1979 207 p
Avail: Univ. Microfilms Order No. 8001585

The theoretical and experimental results of the induced electric field inside a biological system when it is irradiated by a non-ionized electromagnetic (EM) radiation are presented. A numerical method based on a tensor integral equation is outlined for estimating the induced EM heating. A phantom model of man which was constructed with thin plexiglass filled with phantom material, was irradiated by 500 to 3000 MHz EM waves in a microwave anechoic chamber. The distribution of the measured electric field was compared with the distribution of theoretical results obtained numerically from the tensor integral equation method. A quantitative agreement was obtained between experiment and theory. A study was also conducted to investigate effective methods of inducing hyperthermia in the tumors embedded in animal and human bodies by utilizing EM fields. Dissert. Abstr.

EFFECT OF GRAVITATIONAL OVERLOADS, HYPOKINESIA AND HYPODYNAMIA ON THE VESSELS OF THE PULMONARY BLOOD CIRCUIT
A. A. Kasimtsev Feb. 1980 13 p refs Transl. into ENGLISH from Arkh. Anat., Gistol. Embriol. (USSR), no. 2, 1973 p 82-90 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prepared by 1st Leningrad I. M. Pavlov Medical Inst.
(Contract NASw-3199)
(NASA-TM-75963) Avail: NTIS HC A02/MF A01 CSCL 06C

Vessels of the pulmonary circuit are studied under normal conditions, in exposure to single stress or continuous threshold endurable chestspine gravitational stresses, and one to eight weak hypokinesia and hypodynamic effects followed by stress. Examination methods include rentgenography and microrentgenography, clearing, and histology. In exposure to gravitational stress the distal portions of the arterial vessels of the 3 and 4 orders constrict, while all veins dilate. Sinuosity of all vessels is noted. The volume of the capillary bed increases and signs of perivascular edema occur. Due to hypokinesia and hypodynamia the arteries constricted and the arterial bed becomes poor. The veins of all orders dilate and the volume of the capillary bed increases. The changes grew greater the longer thd terms of hypodyamic effects. Successive combination of hypokinesia and hypodynamia and gravitational stresses cause more pronounced changes than separate effects of these two factors and result in great deformity of the vascular walls, including their rupture and penetration of formed elements beyond the limits of the vascular bed. M.G.

EFFECT OF GRAVITATIONAL ACCELERATION, HYPOKINESIA AND HYPODYNAMIA ON THE STRUCTURE OF THE INTESTINAL VASCULAR BED
M. V. Nikitin Feb. 1980 12 p refs Transl. into ENGLISH from Arkh. Anat., Gistol. Embriol. (USSR), no. 3, Mar. 1974 p 54-61 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prepared by 1st Leningrad I. P. Pavlov Medical Inst.
(Contract NASw-3199)
(NASA-TM-75972) Avail: NTIS HC A02/MF A01 CSCL 06C

A series of experiments comparing single and combined effects of hypokinesia and gravitational acceleration on morphology of intestinal blood vessels are discussed. Results indicate that hypokinesia has a whole body nonspecific effect reflected even in an organ whose activity shows little or no change due to hypokinesia. In early hypokinetic stages blood redistribution caused anorexia, intestinal atonia, and secretory disruption. Destructive changes from further exposure include aneurisms, varicoses, extravascular movement of blood elements, and vascular wall muscle fiber degeneration. The effect of acceleration is greatest in the ventrodorsal direction. Changes due to acceleration then hypokinesia are like those due to hypokinesia alone, changes due to acceleration before and after hypokinesia are like those due to acceleration. Adaptation raises acceleration tolerance but the effects do not survive four-week hypokinesia. M.G.

INFLUENCE OF MOBILITY RESTRICTION ON HABITUATION OF THE VESTIBULAR APPARATUS
G. I. Gorgiladze and G. S. Kazanskaya Feb. 1980 8 p refs Transl. into ENGLISH from Dokl. Akad. Nauk SSSR (USSR), v. 211, no. 4, 1 Aug. 1973 p 1005-1008 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-75995) Avail: NTIS HC A02/MF A01 CSCL 06C

Test results presented indicate that 30-day hypokinesia did not affect the intensity of nystagmus: velocity of slow phase, total number of jerks, and duration of the reaction in animals were the same as before mobility restriction and did not differ from those of the control group. However, hypokinesia resulted in the disappearance of habituation of the vestibulary system to repeated angular accelerations. The known hypokinetic changes in the endocrine system were studied. It was concluded that reduction in adrenergic function may be the cause of disappearance of vestibular apparatus habituation during hypokinesia. M.M.M.

DIFFERENTIATION AND RADIOSENSITIVITY OF HEMOPOIETIC STEM CELLS OF MICE DURING HYPOKINESIA

V. N. Shvets 1980 10 p refs Transl. into ENGLISH from Radiobi. (USSR), v. 19, no. 2, 1979 p 199-203 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76066) Avail: NTIS HC A02/MF A01 CSCL 06C

The potential for differentiation and radiosensitivity of the stem hemopoietic cells (KOE) under conditions of initial and later hypokinesia is examined. It is established that in the initial period of hypokinesia (3 days) when a stress reaction prevails, changes occur in the erythroid differentiation and radiosensitivity of KOE. This effect is associated with redistribution of T-lymphocytes that increase in number in the bone marrow of mice during hypokinesia. At later periods of hypokinesia (30 days) when changes in the organism are related to hypokinesia proper, differentiation and radiosensitivity of KOE were normalized. M.G.

BIOCHEMICAL CORRELATES OF SEASONAL CHANGE IN MARINE COMMUNITIES

H. Perry Jeffries May 1979 19 p refs Repr. from Am. Nat., v. 113, no. 5, May 1979 p 643-658
(Grant NOAA-04-80-MO1-147)
(PB-301380/2; Marine-Reprint-119; NOAA-79082402) Copyright. Avail: NTIS HC A02/MF A01 CSCL 06B

Changes in the fatty acid distributions of plankton and benthos in response to seasonal change are analyzed. It is found that as a temperate community matures and becomes more complex, so does its fatty acid composition. Chemical progression is most rapid during succession from winter-spring to summer-fall species groups, a period of reorganization among characteristic fatty acid sets. Increasing amounts of saturated acids seem to disclose a change in community structure, whereas an important polyunsaturate forms a locus around which these progressions take place. GRA

COMPOSITION OF INTESTINAL MICROFLORA OF COSMONAUTS BEFORE AND AFTER SPACE FLIGHTS

N. N. Lizko, V. M. Shilov, G. D. Syrykh, and V. I. Legenkov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 9-20 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 9-13

Avail: NTIS HC A06/MF A01

The composition of the intestinal microflora of 12 cosmonauts was studied before and after space missions of varying duration. Changes in the intestinal microbial coenosis were found prelaunch. The pattern of changes did not vary with an increase in space flight duration. The use of special prophylactic measures exerted a positive effect on intestinal microecology. Bifidobacteria and lactobacilli showed the greatest changes inflight. Therefore, it seems important to arrange preflight sanation of the intestinal microflora as a prophylactic method. Author

SOME NEUROCHEMICAL CHARACTERISTICS OF RATS DURING FLIGHT ABOARD THE COSMOS-782 ARTIFICIAL SATELLITE AND AFTER RETURN TO EARTH

O. G. Gazenko, N. N. Demin, A. N. Panov, D. A. Rashevskaya, N. L. Rubinskaya, and R. A. Tigranyan *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 27-32 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 22-26

Avail: NTIS HC A06/MF A01

The brains of rats flown onboard the biosatellite Cosmos 782 were sampled immediately postflight and taken under neurochemical study. It was shown cytospectrophotometrically that the absolute content of RNA decreased by 20 percent in the cytoplasm of cerebellar Purkinje cells and remained unaltered in glial cells-satellites, and that the protein content did not change. In the frontal cortex (homogenates) the concentration of sulfhydryl groups decreased by 26 percent, activity of nonspecific cholinesterase by 30 percent and acetyl cholinesterase by 33 percent. The activity of the latter in the cerebellum also diminished. Author

CHANGES IN THE NEUROMOTOR SYSTEM DURING 45 DAYS OF HYPOKINESIA

Ye. A. Shaposhnikov, P. I. Sidorov, and A. I. Kolomenskiy *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 45-51 refs Transl. into ENGLISH from Kosmich. Biol. Aviatkomich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 35-39

Avail: NTIS HC A06/MF A01

Neurological and electromyographic examinations of 12 test subjects during a 45 day bed rest study were carried out. Symptoms indicating changes in the suprasegmentary innervation were noted. Shortening of the duration of potentials was shown by needle electromyography. A decline in the threshold of H-reflex and a change in the frequency parameters of EMG were seen. These data suggest a change in the functional state of the central and peripheral motor neuron during prolonged hypokinesia. Prophylectic efficiency of muscle electrostimulation is discussed. Author

ELECTROSTIMULATION OF MUSCLES FOR THE PREVENTION OF NEUROMUSCULAR DISORDERS DURING 45-DAY ANTIORTHOSTATIC HYPOKINESIA

V. S. Georgiyevskiy, Ye. A. Ilinskaya, V. I. Matveyev, V. M. Mikhaylov, and V. I. Pervushin *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 52-57 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 40-44

Avail: NTIS HC A06/MF A01

Healthy test subjects exposed to a 45 day head down tilting (-6.5 deg) showed a decline of the tone and strength of certain muscle groups, a decrease of leg circumference, a deterioration of the walking pattern, and a reduction of exercise tolerance (provocative tests with bicycle ergometry pedalling at a moderate and maximum rate). Electrostimulation of muscles applied by the Tonus-2 equipment for 30 min twice a day, 6 days a week helped to reduce the level of hypokinesia induced disorders. Author

ROLE OF INTEROCEPTIVE AFFERENTATION IN FUNCTION OF THE CORTEX OF THE VISUAL ANALYZER

N. I. Pityk *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 64-71 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 48-53

Avail: NTIS HC A06/MF A01

The experiments on diplacin-immobilized rats showed that stimulation of gastric and rectal mechanoreceptors caused noticeable changes in the control and light-induced impulse activity of neurons of the optic cortex. The predominant pattern of cell reactions were tonic changes of impulsation. They included both stimulatory and inhibitory effects. The latter occurred mostly as a result of stimulation of gastric mechanoreceptors. Changes in the evoked activity of those neurons involved most frequently enhancement or inhibition of responses, contrasting and stabilization of short-latent responses, and then masking with neuronal noise. The functional importance of the changes in the control and evoked activities of neurons of the optic cortex during interoceptive effects as well as possible central pathways of their realization in the optic cortex is discussed. R.E.S.

EFFECT OF ACUTE HYPOXIA ON SPECIFIC AND NONSPECIFIC SYSTEMS OF THE RABBIT BRAIN

N. S. Akopyan and O. G. Baklavadzhyan *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 72-78 refs Transl into ENGLISH from Kosmich. Biol. Aviakosmich Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 53-57

Avail: NTIS HC A06/MF A01

Electrical activity of the brain under hypoxic activity was studied with the use of the EEG. At a simulated altitude of 8500-9000 m, an increase in the amplitude of the early positive and negative phase of the thalamic-cortical evoked potentials, and a slight prolongation of the latent period were seen. Changes in the reticulo-cortical and hypothalamo-cortical evoked potentials included a pronounced inhibition of their negative phase. In the EEG slow delta-waves increased gradually, becoming the major rhythm. The presence of EEG signs of the development of inhibitory processes in the cortex suggested that the changes in evoked potentials were also a result of inhibition of cortical neurons. Hypoxia-adapted rabbits tolerated acute hypoxia much better. They exhibited less pronounced changes in the electric manifestations of the function of specific and nonspecific projection systems of the brain. R.E.S.

STUDY OF BIOELECTRIC ACTIVITY OF NEURO-MUSCULAR AND SYMPATHETIC SYSTEMS DURING EXPOSURE TO A STEADY MAGNETIC FIELD

L. D. Klimovskaya and S. B. Krotova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 79-84 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 58-61

Avail: NTIS HC A06/MF A01

The experiments on an isolated frog neuromuscular preparation showed that an exposure to stable magnetic fields of 1000-4000 Oe did not influence the time parameters, amplitude and pattern of the action potentials of the gastrocnemius muscle induced by ischiatic nerve simulation with single impulses. Similar results were obtained from an analysis of electric responses of the upper cervical sympathetic node to the stimulation of preganglionar fibers in in situ experiments on urethane anesthesized rabbits subjected to a total exposure of a stable magnetic field (500-3000 Oe). In addition, an exposure to a stable magnetic field of 4000 Oe brought about a decrease of the level of depression of the action potential of muscles after conditioning tetanus. R.E.S.

EFFECTS OF STRONG INFRALOW-FREQUENCY MAGNETIC FIELDS ON BONE MARROW CELL DIVISION

A. D. Strzhizhovskiy, G. V. Galaktionova, and P. A. Cheremnykh *In its* USSR Rept.: Space Biol and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 85-88 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 61-63

Avail: NTIS HC A06/MF A01

The effect of an infralow frequency field of 3-127 kOe applied for 1 hr on mitotic activity, frequency of chromosomal aberrations and number of bone marrow cells of mice was studied. The exposure of mice to fields of 3 and 8 kOe stimulated and to fields of 54 and 127 kOe inhibited mitotic activity. No increase in the frequency of aberrant mitoses in bone marrow cells was noted. The changes in the cell number were small (no more than 20 percent) and readily reversible. Author

EFFECT OF CARBON MONOXIDE ON ANIMALS ADAPTED TO HYPOXIC HYPOXIA

V. V. Kustov and V. G. Litau *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 98-102 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 69-72

Avail: NTIS HC A06/MF A01

Experiments were conducted on 80 white male mice to investigate the development of carbon monoxide poisoning in animals adapted to hypoxic hypoxia. The following parameters were studied: body weight, hemoglobin and erythrocyte content of peripheral blood, blood catalase activity, blood peroxidase activity, and increment of carboxyhemoglobin. The results show that carbon monoxide in a concentration of 500 mg/cu m induces substantial changes in mice referable to several integral (body weight), hematological, and enzymatic parameters which are inherent in chronic carbon monoxide poisoning. R.E.S.

N80-17690# Joint Publications Research Service, Arlington, Va.

EFFECT OF STEADY MAGNETIC FIELD ON SOME ASPECTS OF ENERGY AND NITROGEN METABOLISM IN THE RAT CEREBRAL HEMISPHERES

Ye. A. Nosova and L. M. Kurkina *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 103-105 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 72-74

Avail: NTIS HC A06/MF A01

The effects of high intensity steady magnetic fields (SMF) on ammonia, glutamine, glutamic, aspratic and gamma-aminobutyric [GABA] acids were studied, as well as concentration levels of adenisine triphosphoric acid (ATP), phosphocreatine and lactic acid in the cerebral hemispheres of rats. Exposure of animals to SMF of 3000 Oe for 3 hours did not lead to reliable changes in levels of components of the glutamine-glutamic acid system, or in aspartic acid and GABA. The ATP content of brain tissue of rats exposed to SMF was reliably, though not markedly, decreased; phosphocreatine was unchanged, while lactic acid content was significantly increased. The decrease demonstrated in ATP content of the cerebral hemispheres to the bottom range of normal and increase in lactic acid to the top range of normal are indicative of greater activity of metabolic processes in the central nervous system of rats exposed to SMF, as compared to control animals. R.E.S.

N80-17691# Joint Publications Research Service, Arlington, Va.

EFFECT OF RHEOPOLYGLUCIN ON BLOOD CLOTTING FACTORS OF THE AORTA, MYOCARDIUM AND VENAE CAVAE DURING HYPOKINESIA

V. I. Inchina *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 106-110 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 74-76

Avail: NTIS HC A06/MF A01

The influence of low molecular dextrans on blood clotting and fibrinolytic peoperties of blood vessels and the myocardium under hypokinetic conditions was studied. The low molecular dextran used was rheopolyglucin. Constriction of the arteriolar lumen, dilatation of venules, appearance of recessed sacculations and increased capillary permeability were found in the myocardium of hypokinetic rabbits. These changes in the vascular wall, combined with demonstrated changes in the tissular system of hemostasis, lead to impairment of microcirculatory hemostasis. Rheopolyglucin, which normalizes the rheological properties of blood and diminishes aggregation of formed elements, improved microcirculation. However, complete restoration of circulation only occurred when capillaries were free of fibrin. R.E.S.

N80-17692# Joint Publications Research Service, Arlington, Va.

EFFECTS OF ACCELERATIONS ON THE EARLY STAGE OF RADIATION LESION IN ANIMALS

V. V. Antipov, D. N. Gavrilyuk, B. L. Razgovorov, and B. I. Davydov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 111-114 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), Vol. 14, No. 6, Nov./Dec. 1979 p 76-77

Avail: NTIS HC A06/MF A01

The influence of accelerations on the course of the body's primary reaction to the combined effect of accelerations and ionizing radiation was studied. The results of experiments on rats and dogs show that exposure to accelerations prior to radiation attenuates the primary reaction of both rats and dogs. Exposure to accelerations of irradiated animals induced effects in different directions: attenuation of gastro-intestinal tract disturbances at the early stage of radiation lesion in rats, and intensification of some manifestations of the primary reaction in dogs. R.E.S.

TEST IRRADIATION OF CHRONICALLY IRRADIATED DOGS FOR EVALUATION OF HEMOPOIETIC SYSTEM FUNCTION

T. Ye. Burkovskaya and B. A. Markelov *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 115-119 refs Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 78-80

Avail: NTIS HC A06/MF A01

In order to determine the severity of lesion and state of compensatory mechanisms of the hemopoietic system, acute irradiation was used as a used functional load. Male mongrel dogs were kept in a Co gamma field for 6 years. The results show functional deficiency of myeloid hemopoiesis in dogs submitted to long term chronic radiation; this deficiency was not demonstratable in ordinary morphological examinations of blood and bone marrow. The obtained results are indicative of a reduction in the bone marrow reserve of mature granulocytes, and this is more marked in dogs preirradiated in a dose of 1130 rad, as well as disturbances in the system of postradiation renewal of granulocyctes. Repair and compensatory-adaptive capabilities remain at a rather high level in the erythroid system. R.E.S.

N80-17694# Joint Publications Research Service, Arlington, Va.

INSOLUBLE COLLAGEN CONTENT OF DOG TISSUES AFTER EXPOSURE TO LOW DOSES OF CHRONIC GAMMA RADIATION

Z. A. Vinogradova *In its* USSR Rept.: Space Biol. and Aerospace Med., Vol. 14, No. 6, 1979 (JPRS-75041) 31 Jan. 1980 p 120-122 Transl. into ENGLISH from Kosmich. Biol. Aviakosmich. Med. (Moscow), vol. 14, no. 6, Nov./Dec. 1979 p 80-82

Avail: NTIS HC A06/MF A01

The effect of chronic irradiation on metabolism of collagen proteins was studied by assaying the insoluble collagen content of animal tissues at different stages of a chronic experiment. The results show a decrease in insoluble collagen content of organs and tissues (lungs, aorta, liver, tendon, cartilage and skin) of irradiated dogs as the accreted dosage increased. The results also show age-related changes with respect to collegen content. R.E.S.

AROUSAL FROM SLEEP: THE UNIQUENESS OF AN INDIVIDUAL'S RESPONSE AND THE PROBLEM OF NOISE CONTROL Final Report

T. E. LeVere 1979 48 p refs
(Grant NGL-34-002-095)
(NASA-CR-162747) Avail: NTIS HC A03/MF A01 CSCL 06P

The dynamic nature of sleep is reviewed. Research is then presented concerning two fundamental issues: (1) does an individual react differently to auditory sounds when asleep as compared to when the individual is awake and (2) does sleep disruption necessarily involve behavioral awakening? R.E.S.

N80-17696*# General Electric Co., Hudson Falls, N.Y. Space Division.

BIOMEDICAL SYSTEMS ANALYSIS PROGRAM Final Report

31 Dec. 1979 72 p refs
(Contract NAS9-15487)
(NASA-CR-160456; TIR-741-LSP-9025) Avail: NTIS HC A04/MF A01 CSCL 06B

Biomedical monitoring programs which were developed to provide a system analysis context for a unified hypothesis for adaptation to space flight are presented and discussed. A real-time system of data analysis and decision making to assure the greatest possible crew safety and mission success is described. Information about man's abilities, limitations, and characteristic reactions to weightless space flight was analyzed and simulation models were developed. The predictive capabilities of simulation models for fluid-electrolyte regulation, erythropoiesis regulation, and calcium regulation are discussed. R.E.S.

INTERCOMPARISON OF ISS AND BIPM PRIMARY EXPOSURE STANDARDS FOR MEDIUM ENERGY X-RAYS

E. Casnati (Inst. di Fis. dell' Univ., Ferrara, Italy), L. Pugliani, and P. Salvadori 26 Feb. 1979 58 p refs
(ISS-R-79/3) Avail: NTIS HC A04/MF A01

The primary exposure standards of the Istituto Superiore di Sanita and the Bureau International des Poids et Measures in the medium energy X-ray range were compared. After a description of the X-ray qualities on which the comparison was based, how the quantities appearing in the exposure definition were evaluated is explained and the aspects typical of the phenomenological realization of the exposure unit are listed. The properties of the X-ray beam, the correction factors applied to the free-air chamber measurements for obtaining the unit of exposure, the peculiarities and response of the transfer cavity chamber, and the calibration of the latter are discussed. The final results of the comparison are shown then compared with results reported by other laboratories. Author (ESA)

THE TOXICOLOGY OF OZONE. A BIBLIOGRAPHY WITH ABSTRACTS Progress Report, 1964 - Nov. 1979

Elizabeth A. Harrison Nov. 1979 132 p Supersedes NTIS/PS-78/1120
(PB80-800881; NTIS/PS-78/1120) Avail: NTIS HC $30.00/MF $30.00 CSCL 06T

The studies cited cover the toxic effects of ozone on humans, animals, and plants. Although many reports cite the effects of ozone generated as a photochemical oxidant from air pollution, others simply look at the basic biological effects of ozone without discussing its source. The topics described include ozone's effects on forests and agricultural crops, industrial exposure, maximum exposure levels, effects on microorganisms, and physiological effects. This updated bibliography contains 126 abstracts, 41 of which are new entries to the previous edition. GRA

N80-17702# Advisory Group for Aerospace Research and Development, Neuilly-Sur-Seine (France).

THE SURVIVAL AND PROTECTION OF EQUIPMENT IN THE EVENT OF ACCIDENTAL IMMERSION IN COLD WATER

C. Boutelier Jan. 1979 125 p refs In FRENCH
(AGARD-AG-211-FR) Avail: NTIS HC A06/MF A01

The physiological reactions of the human body to thermal aggression and eventual pathological incidences and their treatment are described for airmen and designers of equipment designed for protecting pilots against cold water following accidental immersion. Topics covered include: (1) heat transfer from the human body in ambient cold by conduction, convection, evaporation, and radiation; (2) the physiological response to immersion - tolerance and acclimatization; (3) diagnosis and treatment of local and general effects of cold, including hypothermia; (4) the theoretical basis for protective clothing; (5) methods for evaluating protective clothing; and (6) the design and construction of anti-immersion equipment: wet suits, dry suits, life vests, and lifeboats. COMPENSATORY AND CONJUNCTIVE PROCESSING OF TEST INFORMATION FOR PREDICTION OF RESULTS OF MILITARY FLIGHT TRAINING [KOMPENSATORISK OCH KONJUNKTIV BEHANDLING AV TESTINFORMATION FOER PREDIKTION AV RESULTAT PAA MILITAAR FLYGUTBILDNING]

Leif Carlstedt Mar. 1979 28 p refs In SWEDISH
(FOA-C-55025-H7) Avail: NTIS HC A03/MF A01

Data collected during aircraft pilot selection tests were analyzed by two different methods to determine the predictive ability of each to military flight training. The comparison was made using data from four groups using a compensatory and a conjunctive method. The conjunctive or cross validation method gave better predictions in three of the four groups, but the compensatory or regression analysis method gave better results in the fourth group. Author (ESA)

N80-17704# Research Inst. of National Defence, Linkoeping (Sweden).

STEPWISE PILOT SELECTION: PROCEDURE AND VALIDITY [STEGVIST URVAL AV FLYGFOERARE: PROCEDUR OCH VALIDITET]

Leif Carlstedt Mar. 1979 18 p refs In SWEDISH
(FOA-C-55026-H7) Avail: NTIS HC A02/MF A01

A graduated selection method used since 1970 to select Swedish military pilots is described and compared with previous practice. Formerly, all test data were weighted equally at all stages of the selection process, but now the data are quantified by an expectancy hypothesis at the beginning of the selection process. Also, the personality test defense mechanism test has been introduced as a selection instrument. Using the graduated or stepwise method has improved the selection rate from 45 to 56 men trained per 20 selected, to 41 men trained per 20 selected. Author (ESA)

N80-17705# Research Inst. of National Defence, Linkoeping (Sweden).

THE INFLUENCE OF THE CHANGE OF FLIGHT INSTRUCTION AND HIS ABILITY UPON THE PUPIL'S ADAPTATION TO FLYING [INVERKAN AV FLYGLAERARBYTGN OCH FLYGLAERARENS KVALITET PAA ELEVENS ANPASSNING TILL FLYGNING]

Leif Carlstedt Mar. 1979 20 p refs In SWEDISH
(FOA-C-55027-H8) Avail: NTIS HC A02/MF A01

The importance of the frequency of the changes of flight teacher and of his quality on the pupil's adaptation to flying is studied. It is shown that students having fewer than five flying tests with the same teacher during the 20 first flying hours are expected to fail more often than those who have more than five with the same teacher. The pupil's adaptation to flying (measured by a questionaire) is related to the improvements made at the beginning of the training period. In most cases students adapting well have had teachers rated as good in the flying school. Author (ESA)

N80-17706# Research Inst. of National Defence, Linkoeping (Sweden).
IMPROVED FLIGHT TRAINING METHODS [OPERATION KVALITETSHOEJNING AV FLYGFOERARPRODUKTIONEN]
Leif Carlstedt and F. Paul Johansson Mar. 1979 49 p refs
In SWEDISH
(FOA-C-55028-H8) Avail: NTIS HC A03/MF A01

The evolution of methods used in military pilot training is presented along with a discussion and evaluation of Swedish practices. An experiment is described in which the trainee group is given a distinctive name and exposed to a training cadre which was highly motivated at all levels of command. The long term project showed increases in pilot selection success ratio.

MANNED REMOTE WORK STATION DEVELOPMENT ARTICLE. VOLUME 2: SIMULATION REQUIREMENTS. APPENDIX A: OPEN CHERRY PICKER DEVELOPMENT TEST ARTICLES SPECIFICATION Final Report
1 Mar. 1979 132 p
(Contract NAS9-15507)
(NASA-CR-160465; NSS-MR-RP008-Vol-2) Avail: NTIS HC A07/MF A01 CSCL 05H

A manned remote work station (MRWS) mission scenario, broken down into the three time phases was selected as the basis for analysis of the MRWS flight article requirements and concepts. The mission roles for the three time phases, supporting tradeoff and evaluation studies, was used to identify key issues requiring simulation. The MRWS is discussed in terms of its capability to perform such operations as support of Spacelab experiments, servicing and repair of satellites, and construction. Future considerations for the use of the MRWS are also given.

MANNED REMOTE WORK STATION DEVELOPMENT ARTICLE. VOLUME 3: DEVELOPMENT TEST PLAN. APPENDIX A: MANUFACTURING REQUIREMENTS/SCHEDULE Final Report
1 Mar. 1979 180 p
(Contract NAS9-15507)
(NASA-CR-160466; NSS-MR-RP008-Vol-3) Avail: NTIS HC A09/MF A01 CSCL 05H

The tests and procedures for the manned remote work station (MRWS) open cherry picker (OCP) development test article (DTA) are described to validate systems requirements and performance specifications. A development test program is outlined to evaluate key design issues and man/machine interfaces when the MRWS OCP is used in a shuttle support role of satellite servicing and in orbit construction of large structures.

REFERENCE TREE NETWORKS: VIRTUAL MACHINE AND IMPLEMENTATION Ph.D. Thesis
Robert Hunter Halstead, Jr. 2 Jul. 1979 250 p refs
(Contract N00014-75-C-0661)
(AD-A076570; MIT/LCS/TR-222) Avail: NTIS HC A11/MF A01 CSCL 05/8

A current-technology computing machine may be roughly decomposed into a processor, a memory, and a data path connecting them. The interposition of this data path between processing and storage elements creates a bottleneck which inhibits progress at the high-performance end of the technological spectrum. Additionally, the monolithic nature of present-day processors resists incremental addition or removal of processing power. The research described here attacks the problem of constructing more powerful and more flexible computer systems along three fronts: the definition of a virtual machine providing for parallel computation using objects and object references, the development of a distributed implementation mechanism ('reference trees') supporting object management functions including garbage collection, and the investigation of scheduling algorithms and collection of performance results. A reference tree network using these concepts is composed of a multiple of independent small processors, yet operates as a coherent programming system. Programs and data spread automatically and transparently through the network to occupy underused resources. The modular structure of the network provides many parallel data paths as well as allowing for easy addition or removal of modules, thus addressing some of the problems discussed here. A prototype reference tree network, the Mu Net, is currently in operation.

EFFECTS OF FATIGUE FROM WEARING THE AN/PVS-5 NIGHT VISION GOGGLES ON SKILLS INVOLVED IN HELICOPTER OPERATIONS Technical Report, 13 May - 29 Dec. 1978

Garvin D. Chastain and Albert L. Kubala Jul. 1979 51 p refs (Contract MDA907-78-C-2017; DA Proj. 2Q7-63743-A-775) (AD-A075426; HUMRRO-FR-WD-TX-78-18; ARI-RR-1217) Avail: NTIS HC A04/MF A01 CSCL 06/17

Reviews of the literature on rotary wing flight and interviews with aviators were conducted to determine which helicopter tasks and maneuvers are performed most frequently and/or are the most critical. Those operations found to be most critical were analyzed into perceptual and psychomotor components, and a battery of perceptual and psychomotor tests was selected to measure these factors. Aviators were tested both before and after flying with the AN/PVS-5 goggles. Eye-hand coordination was marginally affected following flight, and reaction time to lights was significantly affected. THE VISUAL SCENE PERCEPTION PROCESS INVOLVED IN MANUAL APPROACH LANDING

P. H. Wewerinke 13 Oct. 1978 87 p refs
(Contract NIVR-1857)
(NLR-TR-78130-U) Avail: NTIS HC A05/MF A01

The outside scene is often an important source of information for manual control tasks. In the context of aircraft control the most importance example is the visual approach scene. Modeling the visual scene perception process on the basis of linear perspective geometry and relative motion cues is dealt with. Its impact on aircraft approach performance is investigated. Model predictions utilizing visual threshold data from baseline experiments and psychophysical literature of a variety of visual approach tasks are compared with the results of an experimental program. The results confirm that the visual scene may be assumed to provide a variety of cues among which the human operator has to divide his attention. Both the performance and workload results illustrate that the model provides a meaningful description of the outside world perception process with a useful predictive capability. Additional research, however, is warranted in order to be able to deal with the realistic, complex, time varying manual approach and landing situation. Author (ESA)

SUPERMAN: A SYSTEM FOR SUPERVISORY MANIPULATION AND THE STUDY OF HUMAN/COMPUTER INTERACTIONS M.S. Thesis

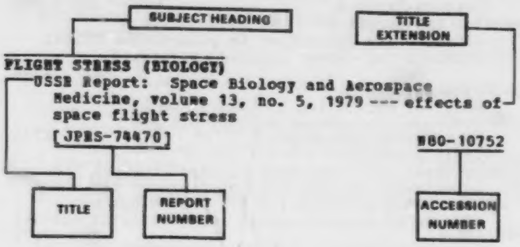
Thurston L. Brooks and Thomas B. Sheridan Jul. 1979 286 p refs
(Contract N00014-77-C-0256; Grant NOAA-04-7-158-44079) (PB-301290/3; MITSG-79/20; NOAA-79082405) Avail: NTIS HC A13/MF A01 CSCL 13J

The need for supervisory control of remote teleoperator vehicles in the ocean environment is considered and it is shown that computer controlled systems can increase the effectiveness of remote manipulation. A distinction is made between absolute tasks--tasks which have a known spatial relationship to the manipulator base prior to execution--and relative tasks-tasks which cannot be spatially defined prior to execution. Based on the mathematical and theoretical foundations described, a supervisory system was developed and demonstrated. GRA

SUBJECT INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 206)* **MAY 1980**

Typical Subject Index Listing



SUBJECT HEADING
TITLE EXTENSION
FLIGHT STRESS (BIOLOGY)
USSR Report: Space Biology and Aerospace Medicine, volume 13, no. 5, 1979 --- effects of space flight stress
[JPRS-74470]
N80-10752
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ABIOGENESIS
'Acetonitrile' - A plausible source of amino acids on the primitive earth
A80-21781

ABSORPTION CROSS SECTIONS
Part-body and multibody effects on absorption of radio-frequency electromagnetic energy by animals and by models of man
A80-22987

ACCELERATION STRESSES (PHYSIOLOGY)
Effect of gravitational overloads, hypokinesia and hypodynamia on the vessels of the pulmonary blood circuit
[NASA-TM-75963] N80-17667

Effect of gravitational acceleration, hypokinesia and hypodynamia on the structure of the intestinal vascular bed
[NASA-TM-75972] N80-17668

Effects of accelerations on the early stage of radiation lesion in animals
N80-17692

ACETYL COMPOUNDS
'Acetonitrile' - A plausible source of amino acids on the primitive earth
A80-21781

ACTIVITY CYCLES (BIOLOGY)
Residual nutational activity of the sunflower hypocotyl in simulated weightlessness
A80-21984

ADAPTATION
Effects of accelerations on the early stage of radiation lesion in animals
N80-17692

The influence of the change of flight instruction and his ability upon the pupil's adaptation to flying
[FOA-C-55027-H8] N80-17705

ADRENAL GLAND
Morphological and functional manifestations of rat adrenal-cortex response to sodium bromide administration under hypodynamic stress
[NASA-TM-75953] N80-16719

ADRENERGICS
The effect of propranolol on human psychomotor performance
A80-21550

ADRENOCORTICOTROPIN (ACTH)
The significance of ACTH for the process of formation of complex heparin compounds in the blood during immobilization stress
[NASA-TM-75946] N80-16727

AEROSOLS
Deposition of hygroscopic atmospheric aerosol particles in the human respiratory tract
A80-23745

AEROSPACE ENVIRONMENTS
Thermodynamic considerations in the support of life for long space voyages
[NASA-CR-162755] N80-16738

AEROSPACE MEDICINE
Physiological response to hyper- and hypogravity during rollercoaster flight
A80-21547

The effect of propranolol on human psychomotor performance
A80-21550

Trapped gas dysbarism requiring recompression therapy
A80-21551

Noninvasive measures of bone bending rigidity in the monkey /M. nemestrina/
A80-21988

Some problems of space medicine and international manned space flights
A80-22840

Linear summation of tilt illusion and tilt aftereffect
A80-22969

Additivity of fusional vergence and pursuit eye movements
A80-22970

Information used by the perceptual and oculomotor systems regarding the amplitude of saccadic and pursuit eye movements
A80-22971

Operant behavior and rectal temperature of squirrel monkeys during 2.45-GHz microwave irradiation
A80-22996

Physiological and hygienic aspects of the effects of high and low temperatures --- Russian book
A80-23079

The influence of psychological disorder on efficiency in operational flying
A80-23211

The psychological aspects of airsickness
A80-23215

An experimental study of mental fatigue
A80-23216

Pilot error - Some laboratory experiments
A80-23217

Aviation medicine. Volume 1 - Physiology and human factors --- Book
A80-24525

Effect of gravitational overloads, hypokinesia and hypodynamia on the vessels of the pulmonary blood circuit
[NASA-TM-75963] N80-17667

Effect of gravitational acceleration, hypokinesia and hypodynamia on the structure of the intestinal vascular bed
[NASA-TM-75972] N80-17668

USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 6, 1979
[JPRS-75041] N80-17674

Biomedical systems analysis program
[NASA-CR-160456] N80-17696

AEROSPACE TECHNOLOGY TRANSFER
Prosthetic device for correction of urinary incontinence
[NASA-TM-78255] N80-16739

AIR NAVIGATION
The design and evaluation of complex systems - Application to a man-machine interface for aerial navigation
A80-24032

AIR POLLUTION
Deposition of hygroscopic atmospheric aerosol particles in the human respiratory tract
A80-23745

AIRBORNE/SPACEBORNE COMPUTERS
Development of display design and command usage guidelines for Spacelab experiment computer applications
A80-24031

AIRCRAFT ACCIDENT INVESTIGATION
The 1976 accident experience of civilian pilots with static physical defects
A80-21552

AIRCRAFT ACCIDENTS
An investigation of landing accidents in relation to fatigue
A80-23214

AIRCRAFT LANDING
An investigation of landing accidents in relation to fatigue
A80-23214
Evaluation of a pilot workload metric for simulated VTOL landing tasks
A80-24042

AIRCRAFT MAINTENANCE
Actual vs simulated equipment for aircraft maintenance training - Cost implications of the incremental vs the unique device
A80-24039

AIRCRAFT MANEUVERS
Development and application of a task taxonomy for tactical flying
A80-24035
Air combat maneuvering performance measurement
A80-24037
The development of objective inflight performance assessment procedures
A80-24038
Prediction and quickening in perspective flight displays for curved landing approaches
A80-24048
Utilization of energy maneuverability data in improving in-flight performance and performance in air combat maneuvering
A80-24049

AIRCRAFT PILOTS
The 1976 accident experience of civilian pilots with static physical defects
A80-21552
An experimental study of mental fatigue
A80-23216
Improved pilot training through modification of selection and training procedures
[FOA-C-55029-H7] N80-17698

AIRCRAFT STABILITY
Operator visual workload shifts as a function of vehicle stability
A80-24041

AIRCRAFT SURVIVABILITY
Utilization of energy maneuverability data in improving in-flight performance and performance in air combat maneuvering
A80-24049

ALGORITHMS
Prediction and quickening in perspective flight displays for curved landing approaches
A80-24048

AMINES
Blockade of the different enzymatic steps in the synthesis of brain amines and memory /CAR/ in hypobaric hypoxic rats treated and untreated with L. Dopa
A80-21542

AMINO ACIDS
'Acetonitrile' - A plausible source of amino acids on the primitive earth
A80-21781

ANAEROBES
Microbial sulfate reduction measured by an automated electrical impedance technique
A80-21982
Anaerobic biological treatment of liquid wastes from pyrolysis processes
[COO-4455-2] N80-16723

ANGIOGRAPHY
Effects of exercise training on left ventricular function in normal subjects - A longitudinal study by radionuclide angiography
A80-23975

ANGULAR ACCELERATION
Influence of mobility restriction on habituation of the vestibular apparatus
[NASA-TM-75995] N80-17669

ANNUAL VARIATIONS
Biochemical correlates of seasonal change in marine communities --- fatty acid composition
[PB-301380/2] N80-17673

APPROACH CONTROL
The visual scene perception process involved in manual approach landing
[NLR-TR-78130-U] N80-17715

APPROACH INDICATORS
Prediction and quickening in perspective flight displays for curved landing approaches
A80-24048

AQUEOUS SOLUTIONS
Method for separating biological cells --- suspended in aqueous polymer systems
[NASA-CASE-MFS-23883-1] N80-16715

ARTIFICIAL GRAVITY
Objectives and conditions of physiological experiments on rats conducted aboard the Cosmos-936 biosatellite --- physiological effects of weightlessness and artificial gravity
N80-17677

ATMOSPHERIC PRESSURE
Oxygenation and ambient air pressure influences on alcohol-induced nystagmus in rabbits
A80-21543

ATTITUDE (INCLINATION)
Linear summation of tilt illusion and tilt aftereffect
A80-22969

AUDITORY PERCEPTION
Loudness enhancement and decrement in four paradigms
A80-23047

AUDITORY SIGNALS
Loudness enhancement and decrement in four paradigms
A80-23047

AUDITORY STIMULI
Arousal from sleep: The uniqueness of an individual's response and the problem of noise control
[NASA-CR-162747] N80-17695

AUTOTROPHS
Programmed control of the autotrophic component of an ecological system that is closed with regard to exchange of gases
N80-17688

AZIMUTH
Perturbation of induced rotation as an index of pattern structure --- for visual stimuli
A80-24047

B

BACTERIA
Method and apparatus for eliminating luminol interference material
[NASA-CASE-MSC-16260-1] N80-16714

BACTERIOLOGY
Microbial sulfate reduction measured by an automated electrical impedance technique
A80-21982

BALLISTOCARDIOGRAPHY
Ballistocardiography - Principles, simulation, applications
A80-24350

BAROTRAUMA
Trapped gas dysbarism requiring recompression therapy
A80-21551

BAYES THEOREM
Empirical Bayes estimation of critical dosages having smallest predictive risk
[AD-A074376] N80-16729

BEACON COLLISION AVOIDANCE SYSTEM
Modeling pilot response delays to beacon collision avoidance system commands
[AD-A075946] N80-16734

BED REST
Creatinuria in man during prolonged hypokinesia
N80-17680

BEHAVIOR
Operant behavior and rectal temperature of squirrel monkeys during 2.45-GHz microwave irradiation
A80-22996

COCKPITS
Bioman - An improved occupant-crew station compliance modeling system
A80-21549
CODING
Visual search and color coding
A80-24044
The use of color-coded symbols in a highly dense situation display
A80-24045
COGNITION
Effect of pretraining criterion on flight simulator and secondary cognitive task performance
A80-24034
COLD ACCLIMATIZATION
The survival and protection of equipment in the event of accidental immersion in cold water --- physiological effects and cold acclimitazation
[AGARD-AG-211-FR] N80-17702
COLD WATER
Effect of alcohol ingestion on man's thermoregulatory responses during cold water immersion
A80-21548
The survival and protection of equipment in the event of accidental immersion in cold water --- physiological effects and cold acclimitazation
[AGARD-AG-211-FR] N80-17702
COLLAGENS
Development of percutaneous energy transmission systems
[PB-299739/3] N80-16731
Insoluble collagen content of dog tissues after exposure to low doses of chronic gamma radiation
N80-17694
COLOR VISION
Vector model for normal and dichromatic color vision
A80-24135
Large color differences and the geometry of Munsell color space --- psychological experiment on vision scheme validity
A80-24136
COMBAT
Air combat maneuvering performance measurement
A80-24037
COMETS
Thermal history, chemical composition and relationship of comets to the origin of life
A80-24492
COMPENSATORY TRACKING
Skilled visual-motor performance by monkeys in a 1.2-GHz microwave field
A80-22997
COMPLEX SYSTEMS
The design and evaluation of complex systems - Application to a man-machine interface for aerial navigation
A80-24032
COMPUTER GRAPHICS
Man-machine analysis of translation and work tasks of Skylab films
A80-24029
Development of display design and command usage guidelines for Spacelab experiment computer applications
A80-24031
Perturbation of induced rotation as an index of pattern structure --- for visual stimuli
A80-24047
COMPUTER STORAGE DEVICES
Reference tree networks: Virtual machine and implementation
[AD-A076570] N80-17713
COMPUTERIZED DESIGN
Operator Station Design System - A computer aided design approach to work station layout
A80-24028
COMPUTERIZED SIMULATION
Bioman - An improved occupant-crew station compliance modeling system
A80-21549
Perturbation of induced rotation as an index of pattern structure --- for visual stimuli
A80-24047
CONDITIONING (LEARNING)
Loudness enhancement and decrement in four paradigms
A80-23047
CONFERENCES
Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings
A80-24026
COST ESTIMATES
Actual vs simulated equipment for aircraft maintenance training - Cost implications of the incremental vs the unique device
A80-24039
COUNTING
Development of Performance Evaluation Tests for Environmental Research /PETER/ - Complex counting test
A80-21546
CREATINE
Creatinuria in man during prolonged hypokinesia
N80-17680
CREATININE
Creatinuria in man during prolonged hypokinesia
N80-17680
CREW STATIONS
Bioman - An improved occupant-crew station compliance modeling system
A80-21549
CREW WORK STATIONS
Operator Station Design System - A computer aided design approach to work station layout
A80-24028

D

DATA PROCESSING
Data analysis methodology for day/night inflight tactical navigation
A80-24050
Reference tree networks: Virtual machine and implementation
[AD-A076570] N80-17713
DECOMPRESSION SICKNESS
Permeability changes in cerebral, iridic, and retinal vessels during experimental decompression sickness in the rat
A80-21545
Trapped gas dysbarism requiring recompression therapy
A80-21551
DESERTS
Training and acclimatization - Effects on responses to exercise in a desert environment
A80-21539
DIETS
Influence of x irradiation and diet on pituitary/thyroid function in the rat
[UR-3490-1674] N80-16722
DISPLAY DEVICES
Development of display design and command usage guidelines for Spacelab experiment computer applications
A80-24031

Visual search and color coding
A80-24044
The use of color-coded symbols in a highly dense situation display
A80-24045
Peripheral vision and tracking performance under stress
A80-24046
Prediction and quickening in perspective flight displays for curved landing approaches
A80-24048
Multi-modal information processing for visual workload relief
[NASA-CR-162720] N80-16737

DITCHING (LANDING)
The survival and protection of equipment in the event of accidental immersion in cold water --- physiological effects and cold acclimitazation
[AGARD-AG-211-FR] N80-17702

DIURESIS
Effects of minimal gravitational loads on fluid-electrolyte metabolism and renal function of man during prolonged immersion
N80-17679

DYNAMIC CONTROL
Simulation of walking under conditions of weightlessness
A80-21094
Programmed control of the autotrophic component of an ecological system that is closed with regard to exchange of gases
N80-17688

E

ECOLOGY
Ecological physiology of the brain --- Russian book
A80-21421

EDUCATION
The influence of the change of flight instruction and his ability upon the pupil's adaptation to flying
[FOA-C-55027-H8] N80-17705

ELASTOMERS
Physical testing of polymers for use in circulatory assist devices
[PB80-101546] N80-16740

ELECTRIC FIELDS
Biological effects of high-voltage electric fields. Volume 1: An update
[EPRI-EA-1123] N80-16730
Interaction of electromagnetic fields with heterogeneous biological systems
N80-17665

ELECTRIC POWER TRANSMISSION
Biological effects of high-voltage electric fields. Volume 1: An update
[EPRI-EA-1123] N80-16730

ELECTRIC STIMULI
Electrostimulation of muscles for the prevention of neuromuscular disorders during 45-day antiorthostatic hypokinesia
N80-17682

ELECTRICAL IMPEDANCE
Microbial sulfate reduction measured by an automated electrical impedance technique
A80-21982

ELECTROLYTES
Effects of minimal gravitational loads on fluid-electrolyte metabolism and renal function of man during prolonged immersion
N80-17679

ELECTROMAGNETIC ABSORPTION
Calorimetric measurements of microwave energy absorption by mice after simultaneous exposure of 18 animals
A80-22985
Part-body and multibody effects on absorption of radio-frequency electromagnetic energy by animals and by models of man
A80-22987
A geometrical-optics and an exact solution for internal fields in and energy absorption by a cylindrical model of man irradiated by an electromagnetic plane wave
A80-22988
Heating of spherical versus realistic models of human and infrahuman heads by electromagnetic waves
A80-22989
Circularly polarized 2450-MHz waveguide system for chronic exposure of small animals to microwaves
A80-22990

ELECTROMAGNETIC FIELDS
Extremely-low-frequency fields and the slime mold Physarum polycephalum - Evidence of depressed cellular function and of internuclear interaction
A80-22993

ELECTROMAGNETIC RADIATION
Induction of calcium-ion efflux from brain tissue by radio-frequency radiation - Effects of modulation frequency and field strength
A80-22992
Interaction of electromagnetic fields with heterogeneous biological systems
N80-17665

ELECTRON PARAMAGNETIC RESONANCE
Theoretical studies of the light reactions in photosynthesis
N80-16717

ELECTROPHORESIS
Method for separating biological cells --- suspended in aqueous polymer systems
[NASA-CASE-MFS-23883-1] N80-16715

ENDOSCOPES
Apparatus for endoscopic examination --- analysis of the propulsion system configuration and transmitter
[NASA-CASE-NPO-14092-1] N80-16725

ENERGY TRANSFER
Development of percutaneous energy transmission systems
[PB-299739/3] N80-16731
Development of precutaneous energy transmission
[PB-300518/8] N80-16732

ENGLAND
The historical background to wartime research in psychology in the Royal Air Force
A80-23209

ENVIRONMENT EFFECTS
Factors influencing specific growth rates and seasonal abundance of eutrophic lake phytoplankton
N80-16716

ENVIRONMENT SIMULATION
Bioman - An improved occupant-crew station compliance modeling system
A80-21549

ENVIRONMENTAL TESTS
Development of Performance Evaluation Tests for Environmental Research /PETER/ - Complex counting test
A80-21546

ENZYME ACTIVITY
Blockade of the different enzymatic steps in the synthesis of brain amines and memory /CAR/ in hypobaric hypoxic rats treated and untreated with L. Dopa
A80-21542
The effects of long-term intoxication by the inhalation of gaseous HF on myocardial cell metabolism and serum cardiac enzyme levels in guinea pigs
A80-22124
Some neurochemical characteristics of rats during flight aboard the Cosmos-782 artificial satellite and after return to Earth
N80-17678

EQUATIONS OF MOTION
Recursive solution to the equations of motion of an N-link manipulator
A80-23996

ETHYL ALCOHOL
Oxygenation and ambient air pressure influences on alcohol-induced nystagmus in rabbits
A80-21543
Effect of alcohol ingestion on man's thermoregulatory responses during cold water immersion
A80-21548

EUCLIDEAN GEOMETRY
Large color differences and the geometry of Munsell color space --- psychological experiment on vision scheme validity
A80-24136

EUTROPHICATION
Factors influencing specific growth rates and seasonal abundance of eutrophic lake phytoplankton N80-16716

EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Information processing in humans, volume 3. A bibliography with abstracts [PB80-800931] N80-17707

EVOLUTION (DEVELOPMENT)
Some philosophical aspects of the problem of man, the biosphere and space N80-17675

EXOBIOLOGY
USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 6, 1979 [JPRS-75041] N80-17674

EXPOSURE
Research related to the expansion and improvement of human vibration exposure criteria N80-16217

EXTREMELY LOW RADIO FREQUENCIES
Extremely-low-frequency fields and the slime mold Physarum polycephalum - Evidence of depressed cellular function and of internuclear interaction A80-22993

EYE MOVEMENTS
Additivity of fusional vergence and pursuit eye movements A80-22970

EYE PROTECTION
Evaluation of commercially available laser protective eyewear [PB80-103039] N80-16741

F

F-4 AIRCRAFT
Validation of an in flight performance measurement methodology - F-4 ground attack training evaluation A80-24036

FATIGUE (BIOLOGY)
Adapting to two orientations - Disinhibition in a visual aftereffect A80-22967
An experimental study of mental fatigue A80-23216
A review of literature relating to visual fatigue A80-24043

FATTY ACIDS
Biochemical correlates of seasonal change in marine communities --- fatty acid composition [PB-301380/2] N80-17673

FLIGHT
Effects of fatigue from wearing the AN/PVS-5 night vision goggles on skills involved in helicopter operations [AD-A075426] N80-17714

FLIGHT CONTROL
Utilization of energy maneuverability data in improving in-flight performance and performance in air combat maneuvering A80-24049

FLIGHT CREWS
Bioman - An improved occupant-crew station compliance modeling system A80-21549
Aircrew stress in wartime operations --- Book A80-23208
The historical background to wartime research in psychology in the Royal Air Force A80-23209
Clinical and statistical study of neurosis precipitated by flying duties A80-23210
The influence of psychological disorder on efficiency in operational flying A80-23211
Fluctuations in navigator performance during operational sorties A80-23212
Some measures of the effect of operational stress on bomber crews A80-23213
The psychological aspects of airsickness A80-23215

FLIGHT FATIGUE
An investigation of landing accidents in relation to fatigue A80-23214
An experimental study of mental fatigue A80-23216

FLIGHT FITNESS
The 1976 accident experience of civilian pilots with static physical defects A80-21552

FLIGHT SIMULATION
An investigation of landing accidents in relation to fatigue A80-23214
The design and evaluation of complex systems - Application to a man-machine interface for aerial navigation A80-24032

FLIGHT SIMULATORS
Effect of pretraining criterion on flight simulator and secondary cognitive task performance A80-24034
Prediction and quickening in perspective flight displays for curved landing approaches A80-24048

FLIGHT STRESS (BIOLOGY)
Physiological response to hyper- and hypogravity during rollercoaster flight A80-21547

FLIGHT TRAINING
Compensatory and conjunctive processing of test information for prediction of results of military flight training [FOA-C-55025-H7] N80-17703
Stepwise pilot selection: Procedure and validity [FOA-C-55026-H7] N80-17704
Improved flight training methods [FOA-C-55028-H8] N80-17706

G

GAS EXCHANGE
Programmed control of the autotrophic component of an ecological system that is closed with regard to exchange of gases N80-17688

GASTROINTESTINAL SYSTEM
Effects of ingestion of cold and hot water on the course of thermal changes in the stomach and intestine [NASA-TM-75515] N80-16728

GEOMETRICAL OPTICS
A geometrical-optics and an exact solution for internal fields in and energy absorption by a cylindrical model of man irradiated by an electromagnetic plane wave A80-22988

GLUCOSE
Growth hormone control of glucose oxidation pathways in hypophysectomized rats A80-24222
Glucose metabolism in different regions of the rat brain under hypokinetic stress influence [NASA-TM-75949] N80-16718

GOGGLES
Effects of fatigue from wearing the AN/PVS-5 night vision goggles on skills involved in helicopter operations [AD-A075426] N80-17714

GRAVITATIONAL EFFECTS
Physiological response to hyper- and hypogravity during rollercoaster flight A80-21547
Effect of gravitation stress and hypokinesia on blood vessels of the testicle [NASA-TM-75942] N80-16726
Effects of minimal gravitational loads on fluid-electrolyte metabolism and renal function of man during prolonged immersion N80-17679

GROWTH
Effect of carbon monoxide on animals adapted to hypoxic hypoxia N80-17689

H

HEAD (ANATOMY)
Heating of spherical versus realistic models of human and infrahuman heads by electromagnetic waves
A80-22989

HEAD-UP DISPLAYS
Utilization of energy maneuverability data in improving in-flight performance and performance in air combat maneuvering
A80-24049

HEALTH PHYSICS
Part-body and multibody effects on absorption of radio-frequency electromagnetic energy by animals and by models of man
A80-22987
Cardiograms: Theory and applications --- Book
A80-24347
The theory and application of magnetocardiography
A80-24348
Phonocardiography - Analyses of instrumentation, and vibration of heart structures to determine their constitutive properties
A80-24349
Ballistocardiography - Principles, simulation, applications
A80-24350
Influence of x irradiation and diet on pituitary/thyroid function in the rat
[UR-3490-1674] N80-16722
Biological effects of high-voltage electric fields. Volume 1: An update
[EPRI-EA-1123] N80-16730
Evaluation of commercially available laser protective eyewear
[PB80-103039] N80-16741
Interaction of electromagnetic fields with heterogeneous biological systems
N80-17665
Effects of accelerations on the early stage of radiation lesion in animals
N80-17692
Test irradiation of chronically irradiated dogs for evaluation of hemopoietic system function
N80-17693
Insoluble collagen content of dog tissues after exposure to low doses of chronic gamma radiation
N80-17694
Proposed national exposure limits for microwave and radiofrequency radiation
[ISS-P-79/2] N80-17699
Intercomparison of ISS and BIPM primary exposure standards for medium energy X-rays
[ISS-R-79/3] N80-17700

HEART DISEASES
Cardiograms: Theory and applications --- Book
A80-24347

HEART FUNCTION
Central circulation and metabolism of the healthy man during postural exposures and arm exercise in the head-down position
A80-21540
A two-stage identification scheme for the determination of the parameters of a model of left heart and systemic circulation
A80-22972
Effects of exercise training on left ventricular function in normal subjects - A longitudinal study by radionuclide angiography
A80-23975
Catecholamines and myocardial contractile function during hypodynamia and with an altered thyroid hormone balance
[NASA-TM-76000] N80-16720

HEART IMPLANTATION
Implanted energy conversion system
[PB80-101116] N80-16733

HEART RATE
An evaluation of heart rate during activity of high psychological and physiological stress --- German thesis
A80-21851

HEAT ACCLIMATIZATION
Training and acclimatization - Effects on responses to exercise in a desert environment
A80-21539

HEAT MEASUREMENT
Calorimetric measurements of microwave energy absorption by mice after simultaneous exposure of 18 animals
A80-22985

HEAT TOLERANCE
A study of occupational heat stress by analysis of environmental and human factors
N80-16735

HELICOPTER PERFORMANCE
Data analysis methodology for day/night inflight tactical navigation
A80-24050

HELICOPTERS
Effects of fatigue from wearing the AN/PVS-5 night vision goggles on skills involved in helicopter operations
[AD-A075426] N80-17714

HEMATOPOIESIS
Differentiation and radiosensitivity of hemopoietic stem cells of mice during hypokinesia
[NASA-TM-76066] N80-17671

HEMATOPOIETIC SYSTEM
Differentiation and radiosensitivity of hemopoietic stem cells of mice during hypokinesia
[NASA-TM-76066] N80-17671
Test irradiation of chronically irradiated dogs for evaluation of hemopoietic system function
N80-17693

HEMODYNAMIC RESPONSES
Effect of gravitational overloads, hypokinesia and hypodynamia on the vessels of the pulmonary blood circuit
[NASA-TM-75963] N80-17667
Effect of gravitational acceleration, hypokinesia and hypodynamia on the structure of the intestinal vascular bed
[NASA-TM-75972] N80-17668

HEMOSTATICS
Effect of rheopolyglucin on blood clotting factors of the aorta, myocardium and venae cavae during hypokinesia
N80-17691

HEPARINS
The significance of ACTH for the process of formation of complex heparin compounds in the blood during immobilization stress
[NASA-TM-75946] N80-16727

HIGH TEMPERATURE
Physiological and hygienic aspects of the effects of high and low temperatures --- Russian book
A80-23079

HORMONES
Growth hormone control of glucose oxidation pathways in hypophysectomized rats
A80-24222

HUMAN BEHAVIOR
Arousal from sleep: The uniqueness of an individual's response and the problem of noise control
[NASA-CR-162747] N80-17695

HUMAN BEINGS
Effect of alcohol ingestion on man's thermoregulatory responses during cold water immersion
A80-21548

HUMAN BODY
Part-body and multibody effects on absorption of radio-frequency electromagnetic energy by animals and by models of man
A80-22987
A geometrical-optics and an exact solution for internal fields in and energy absorption by a cylindrical model of man irradiated by an electromagnetic plane wave
A80-22988
Heating of spherical versus realistic models of human and infrahuman heads by electromagnetic waves
A80-22989
Whole-body vibration of heavy equipment operators
N80-16216
Research related to the expansion and improvement of human vibration exposure criteria
N80-16217

HUMAN FACTORS ENGINEERING
Bioman - An improved occupant-crew station compliance modeling system
A80-21549

Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings A80-24026

A review of literature relating to visual fatigue A80-24043

A study of occupational heat stress by analysis of environmental and human factors N80-16735

HUMAN FACTORS LABORATORIES

Pilot error - Some laboratory experiments A80-23217

HUMAN PATHOLOGY

A two-stage identification scheme for the determination of the parameters of a model of left heart and systemic circulation A80-22972

HUMAN PERFORMANCE

Ecological physiology of the brain --- Russian book A80-21421

Multi-modal information processing for visual workload relief [NASA-CR-162720] N80-16737

Stepwise pilot selection: Procedure and validity [FOA-C-55026-H7] N80-17704

Information processing in humans, volume 3. A bibliography with abstracts [PB80-800931] N80-17707

HUMAN TOLERANCES

Physiological and hygienic aspects of the effects of high and low temperatures --- Russian book A80-23079

HYDROFLUORIC ACID

The effects of long-term intoxication by the inhalation of gaseous HF on myocardial cell metabolism and serum cardiac enzyme levels in guinea pigs A80-22124

HYGROSCOPICITY

Deposition of hygroscopic atmospheric aerosol particles in the human respiratory tract A80-23745

HYPERTENSION

Dynamics of change in rat arterial pressure under conditions of immobilization [NASA-TM-76045] N80-17672

HYPOBARIC ATMOSPHERES

Blockade of the different enzymatic steps in the synthesis of brain amines and memory /CAR/ in hypobaric hypoxic rats treated and untreated with L. Dopa A80-21542

HYPODYNAMIA

Noninvasive measures of bone bending rigidity in the monkey /M. nemestrina/ A80-21988

Morphological and functional manifestations of rat adrenal-cortex response to sodium bromide administration under hypodynamic stress [NASA-TM-75953] N80-16719

Catecholamines and myocardial contractile function during hypodynamia and with an altered thyroid hormone balance [NASA-TM-76000] N80-16720

Effect of gravitational overloads, hypokinesia and hypodynamia on the vessels of the pulmonary blood circuit [NASA-TM-75963] N80-17667

Effect of gravitational acceleration, hypokinesia and hypodynamia on the structure of the intestinal vascular bed [NASA-TM-75972] N80-17668

RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization [NASA-TM-76032] N80-17670

HYPOKINESIA

Glucose metabolism in different regions of the rat brain under hypokinetic stress influence [NASA-TM-75949] N80-16718

Effect of gravitation stress and hypokinesia on blood vessels of the testicle [NASA-TM-75942] N80-16726

Effect of gravitational overloads, hypokinesia and hypodynamia on the vessels of the pulmonary blood circuit [NASA-TM-75963] N80-17667

Effect of gravitational acceleration, hypokinesia and hypodynamia on the structure of the intestinal vascular bed [NASA-TM-75972] N80-17668

Influence of mobility restriction on habituation of the vestibular apparatus [NASA-TM-75995] N80-17669

Differentiation and radiosensitivity of hemopoietic stem cells of mice during hypokinesia [NASA-TM-76066] N80-17671

Creatinuria in man during prolonged hypokinesia N80-17680

Changes in the neuromotor system during 45 days of hypokinesia N80-17681

Electrostimulation of muscles for the prevention of neuromuscular disorders during 45-day antiorthostatic hypokinesia N80-17682

Effect of rheopolyglucin on blood clotting factors of the aorta, myocardium and venae cavae during hypokinesia N80-17691

HYPOTHERMIA

Effect of alcohol ingestion on man's thermoregulatory responses during cold water immersion A80-21548

HYPOXIA

Blockade of the different enzymatic steps in the synthesis of brain amines and memory /CAR/ in hypobaric hypoxic rats treated and untreated with L. Dopa A80-21542

Effect of acute hypoxia on specific and nonspecific systems of the rabbit brain N80-17685

Effect of carbon monoxide on animals adapted to hypoxic hypoxia N80-17689

I

IMAGE RESOLUTION

The effect of image quality on search for static and dynamic targets - MTFA-performance correlations A80-24040

IMMOBILIZATION

The significance of ACTH for the process of formation of complex heparin compounds in the blood during immobilization stress [NASA-TM-75946] N80-16727

Dynamics of change in rat arterial pressure under conditions of immobilization [NASA-TM-76045] N80-17672

IN-FLIGHT MONITORING

Validation of an in flight performance measurement methodology - F-4 ground attack training evaluation A80-24036

The development of objective inflight performance assessment procedures A80-24038

Utilization of energy maneuverability data in improving in-flight performance and performance in air combat maneuvering A80-24049

INDUSTRIAL SAFETY

A study of occupational heat stress by analysis of environmental and human factors N80-16735

INDUSTRIAL WASTES

Anaerobic biological treatment of liquid wastes from pyrolysis processes [COO-4455-2] N80-16723

INFORMATION THEORY

Reference tree networks: Virtual machine and implementation [AD-A076570] N80-17713

INTESTINES

Composition of intestinal microflora of cosmonauts before and after space flights N80-17676

IONIZING RADIATION

Intercomparison of ISS and BIPM primary exposure standards for medium energy X-rays [ISS-R-79/3] N80-17700

K

KALMAN FILTERS
Optimal estimator model for human spatial orientation
A80-24265

L

LASERS
Evaluation of commercially available laser protective eyewear
[PB80-103039] N80-16741

LEARNING THEORY
Comparison of two techniques for the development and maintenance of tracking behavior in monkeys
A80-21541
Information processing in humans, volume 3. A bibliography with abstracts
[PB80-800931] N80-17707

LIFE CYCLE COSTS
Actual vs simulated equipment for aircraft maintenance training - Cost implications of the incremental vs the unique device
A80-24039

LIFE SCIENCES
Space flight research relevant to health, physical education, and recreation: With particular reference to Skylab's life science experiments
[NASA-EP-148] N80-17697

LINEAR PREDICTION
Optimal estimator model for human spatial orientation
A80-24265

LINKAGES
Recursive solution to the equations of motion of an N-link manipulator
A80-23996

LONG TERM EFFECTS
Effects of minimal gravitational loads on fluid-electrolyte metabolism and renal function of man during prolonged immersion
N80-17679

LOUDNESS
Loudness enhancement and decrement in four paradigms
A80-23047

LOW TEMPERATURE
Physiological and hygienic aspects of the effects of high and low temperatures --- Russian book
A80-23079

M

MACHINERY
Whole-body vibration of heavy equipment operators
N80-16216

MAGNETIC FIELDS
Study of bioelectric activity of neuro-muscular and sympathetic systems during exposure to a steady magnetic field
N80-17686
Effects of strong infralow-frequency magnetic fields on bone marrow cell division
N80-17687
Effect of steady magnetic field on some aspects of energy and nitrogen metabolism in the rat cerebral hemispheres
N80-17690

MAGNETOCARDIOGRAPHY
The theory and application of magnetocardiography
A80-24348

MAN ENVIRONMENT INTERACTIONS
Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings
A80-24026
Some philosophical aspects of the problem of man, the biosphere and space
N80-17675

MAN MACHINE SYSTEMS
Bioman - An improved occupant-crew station compliance modeling system
A80-21549
System design features of the Space Shuttle remote manipulator
A80-23993
Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings
A80-24026
Operator Station Design System - A computer aided design approach to work station layout
A80-24028
Man-machine analysis of translation and work tasks of Skylab films
A80-24029
Development of display design and command usage guidelines for Spacelab experiment computer applications
A80-24031
The design and evaluation of complex systems - Application to a man-machine interface for aerial navigation
A80-24032
Peripheral vision and tracking performance under stress
A80-24046
Prediction and quickening in perspective flight displays for curved landing approaches
A80-24048
Utilization of energy maneuverability data in improving in-flight performance and performance in air combat maneuvering
A80-24049
Development of precutaneous energy transmission
[PB-300518/8] N80-16732
Multi-modal information processing for visual workload relief
[NASA-CR-162720] N80-16737
Physical testing of polymers for use in circulatory assist devices
[PB80-101546] N80-16740
Manned remote work station development article, executive summary
[NASA-CR-160462] N80-17708
Manned remote work station development article. Volume 1, book 1: Flight article requirements. Appendix A: Mission requirements
[NASA-CR-160463] N80-17709
Manned remote work station development article. Volume 1, book 2, appendix B: Trade and design definition studies
[NASA-CR-160464] N80-17710
Manned remote work station development article. Volume 2: Simulation requirements. Appendix A: Open cherry picker development test articles specification
[NASA-CR-160465] N80-17711
Manned remote work station development article. Volume 3: Development test plan. Appendix A: Manufacturing requirements/schedule
[NASA-CR-160466] N80-17712
Reference tree networks: Virtual machine and implementation
[AD-A076570] N80-17713
Superman: A system for supervisory manipulation and the study of human/computer interactions
[PB-301290/3] N80-17716

MANIPULATORS
System design features of the Space Shuttle remote manipulator
A80-23993
Recursive solution to the equations of motion of an N-link manipulator
A80-23996

MANNED SPACE FLIGHT
Some problems of space medicine and international manned space flights
A80-22840

MARINE BIOLOGY
Microbial sulfate reduction measured by an automated electrical impedance technique
A80-21982
Biochemical correlates of seasonal change in marine communities --- fatty acid composition
[PB-301380/2] N80-17673

MARROW
Effects of strong infralow-frequency magnetic fields on bone marrow cell division
N80-17687

MATHEMATICAL MODELS
  A geometrical-optics and an exact solution for internal fields in and energy absorption by a cylindrical model of man irradiated by an electromagnetic plane wave
    A80-22988
  Heating of spherical versus realistic models of human and infrahuman heads by electromagnetic waves
    A80-22989
  Planar biped dynamics and control
    N80-16736
  The visual scene perception process involved in manual approach landing
    [NLR-TR-78130-U] N80-17715
MECHANORECEPTORS
  Role of interoceptive afferentation in function of the cortex of the visual analyzer
    N80-17684
MEDICAL EQUIPMENT
  Physical testing of polymers for use in circulatory assist devices
    [PB80-101546] N80-16740
MEMORY
  Blockade of the different enzymatic steps in the synthesis of brain amines and memory /CAR/ in hypobaric hypoxic rats treated and untreated with L. Dopa
    A80-21542
  Information processing in humans, volume 3. A bibliography with abstracts
    [PB80-800931] N80-17707
MENTAL PERFORMANCE
  Multi-modal information processing for visual workload relief
    [NASA-CR-162720] N80-16737
METABOLISM
  Central circulation and metabolism of the healthy man during postural exposures and arm exercise in the head-down position
    A80-21540
  Simulated weightlessness - Effects on bioenergetic balance
    A80-21544
METEOROLOGY
  Intercomparison of ISS and BIPM primary exposure standards for medium energy X-rays
    [ISS-R-79/3] N80-17700
METROLOGY
  Proposed national exposure limits for microwave and radiofrequency radiation
    [ISS-P-79/2] N80-17699
MICHIGAN
  Factors influencing specific growth rates and seasonal abundance of eutrophic lake phytoplankton
    N80-16716
MICROORGANISMS
  Composition of intestinal microflora of cosmonauts before and after space flights
    N80-17676
MICROWAVE FREQUENCIES
  Contraction of smooth muscle in a microwave field
    A80-22995
  Skilled visual-motor performance by monkeys in a 1.2-GHz microwave field
    A80-22997
MICROWAVE TRANSMISSION
  Calorimetric measurements of microwave energy absorption by mice after simultaneous exposure of 18 animals
    A80-22985
  Circularly polarized 2450-MHz waveguide system for chronic exposure of small animals to microwaves
    A80-22990
MICROWAVES
  Operant behavior and rectal temperature of squirrel monkeys during 2.45-GHz microwave irradiation
    A80-22996
  Proposed national exposure limits for microwave and radiofrequency radiation
    [ISS-P-79/2] N80-17699
MILITARY AVIATION
  Aircrew stress in wartime operations --- Book
    A80-23208
  The historical background to wartime research in psychology in the Royal Air Force
    A80-23209
  Clinical and statistical study of neurosis precipitated by flying duties
    A80-23210
  The influence of psychological disorder on efficiency in operational flying
    A80-23211
  Fluctuations in navigator performance during operational sorties
    A80-23212
  Some measures of the effect of operational stress on bomber crews
    A80-23213
  The psychological aspects of airsickness
    A80-23215
  An experimental study of mental fatigue
    A80-23216
  Pilot error - Some laboratory experiments
    A80-23217
  Development and application of a task taxonomy for tactical flying
    A80-24035
  Aviation medicine. Volume 1 - Physiology and human factors --- Book
    A80-24525
MILITARY OPERATIONS
  Air combat maneuvering performance measurement
    A80-24037
MILITARY PSYCHOLOGY
  Compensatory and conjunctive processing of test information for prediction of results of military flight training
    [FOA-C-55025-H7] N80-17703
MISSION PLANNING
  Manned remote work station development article. Volume 1, book 1: Flight article requirements. Appendix A: Mission requirements
    [NASA-CR-160463] N80-17709
MITOSIS
  Effects of strong infralow-frequency magnetic fields on bone marrow cell division
    N80-17687
MODULATION
  Induction of calcium-ion efflux from brain tissue by radio-frequency radiation - Effects of modulation frequency and field strength
    A80-22992
MOLECULAR BIOLOGY
  Models of long-range order in cerebral macromolecules - Effects of sub-ELF and of modulated VHF and UHF fields
    A80-22994
  Physio-chemical investigation of some areas of fundamental significance to biophysics
    [ORO-3018-T1] N80-16721
MONKEYS
  Comparison of two techniques for the development and maintenance of tracking behavior in monkeys
    A80-21541
MOTION SICKNESS
  The psychological aspects of airsickness
    A80-23215
MUSCLES
  Contraction of smooth muscle in a microwave field
    A80-22995
MUSCULAR FUNCTION
  Contraction of smooth muscle in a microwave field
    A80-22995
  Changes in the neuromotor system during 45 days of hypokinesia
    N80-17681
  Electrostimulation of muscles for the prevention of neuromuscular disorders during 45-day antiorthostatic hypokinesia
    N80-17682
MYOCARDIUM
  The effects of long-term intoxication by the inhalation of gaseous HF on myocardial cell metabolism and serum cardiac enzyme levels in guinea pigs
    A80-22124
  Catecholamines and myocardial contractile function during hypodynamia and with an altered thyroid hormone balance
    [NASA-TM-76000] N80-16720

N

NAVIGATORS
Fluctuations in navigator performance during operational sorties
A80-23212

NEUROGLIA
RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization
[NASA-TM-76032] N80-17670

NEURONS
RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization
[NASA-TM-76032] N80-17670

NEUROPHYSIOLOGY
Ecological physiology of the brain --- Russian book
A80-21421
Role of interoceptive afferentation in function of the cortex of the visual analyzer
N80-17684
Effect of acute hypoxia on specific and nonspecific systems of the rabbit brain
N80-17685
Study of bioelectric activity of neuro-muscular and sympathetic systems during exposure to a steady magnetic field
N80-17686

NEUROSES
Clinical and statistical study of neurosis precipitated by flying duties
A80-23210

NIGHT FLIGHTS (AIRCRAFT)
Data analysis methodology for day/night inflight tactical navigation
A80-24050

NIGHT VISION
Effects of fatigue from wearing the AN/PVS-5 night vision goggles on skills involved in helicopter operations
[AD-A075426] N80-17714

NITRILES
'Acetonitrile' - A plausible source of amino acids on the primitive earth
A80-21781

NITROGEN METABOLISM
Effect of steady magnetic field on some aspects of energy and nitrogen metabolism in the rat cerebral hemispheres
N80-17690

NOISE POLLUTION
Arousal from sleep: The uniqueness of an individual's response and the problem of noise control
[NASA-CR-162747] N80-17695

NUTATION
Residual nutational activity of the sunflower hypocotyl in simulated weightlessness
A80-21984

NYSTAGMUS
Oxygenation and ambient air pressure influences on alcohol-induced nystagmus in rabbits
A80-21543

O

ONBOARD EQUIPMENT
Manned remote work station development article, executive summary
[NASA-CR-160462] N80-17708
Manned remote work station development article. Volume 1, book 1: Flight article requirements. Appendix A: Mission requirements
[NASA-CR-160463] N80-17709
Manned remote work station development article. Volume 1, book 2, appendix B: Trade and design definition studies
[NASA-CR-160464] N80-17710
Manned remote work station development article. Volume 2: Simulation requirements. Appendix A: Open cherry picker development test articles specification
[NASA-CR-160465] N80-17711
Manned remote work station development article. Volume 3: Development test plan. Appendix A: Manufacturing requirements/schedule
[NASA-CR-160466] N80-17712

OPERATOR PERFORMANCE
Development of Performance Evaluation Tests for Environmental Research /PETER/ - Complex counting test
A80-21546
Fluctuations in navigator performance during operational sorties
A80-23212

OPERATORS (PERSONNEL)
Whole-body vibration of heavy equipment operators
N80-16216

OPTICAL ILLUSION
Linear summation of tilt illusion and tilt aftereffect
A80-22969

OPTICAL TRACKING
Additivity of fusional vergence and pursuit eye movements
A80-22970
Information used by the perceptual and oculomotor systems regarding the amplitude of saccadic and pursuit eye movements
A80-22971
Effect of vestibular stimuli on visual tracking in a limited tracking area
N80-17683

OPTIMAL CONTROL
Optimal estimator model for human spatial orientation
A80-24265

ORGANIC CHEMISTRY
Thermal history, chemical composition and relationship of comets to the origin of life
A80-24492
Physio-chemical investigation of some areas of fundamental significance to biophysics
[ORO-3018-T1] N80-16721

ORIENTATION
Adapting to two orientations - Disinhibition in a visual aftereffect
A80-22967

ORTHOSTATIC TOLERANCE
An ultrasonic plethysmograph for space flight applications
A80-21553

OXIDATION
Growth hormone control of glucose oxidation pathways in hypophysectomized rats
A80-24222

OXYGEN TENSION
Oxygenation and ambient air pressure influences on alcohol-induced nystagmus in rabbits
A80-21543

OZONE
The toxicology of ozone. A bibliography with abstracts
[PB80-800881] N80-17701

P

PERFORMANCE PREDICTION
Data analysis methodology for day/night inflight tactical navigation
A80-24050

PERIPHERAL VISION
Peripheral vision and tracking performance under stress
A80-24046

PERMEABILITY
Permeability changes in cerebral, iridic, and retinal vessels during experimental decompression sickness in the rat
A80-21545

PHONOCARDIOGRAPHY
Phonocardiography - Analyses of instrumentation, and vibration of heart structures to determine their constitutive properties
A80-24349

PHOTORECEPTORS
Vector model for normal and dichromatic color vision
A80-24135

PHOTOSYNTHESIS
Theoretical studies of the light reactions in photosynthesis
N80-16717

PHYSICAL EXAMINATIONS
- The 1976 accident experience of civilian pilots with static physical defects A80-21552

PHYSICAL EXERCISE
- Training and acclimatization - Effects on responses to exercise in a desert environment A80-21539
- Central circulation and metabolism of the healthy man during postural exposures and arm exercise in the head-down position A80-21540
- Effects of exercise training on left ventricular function in normal subjects - A longitudinal study by radionuclide angiography A80-23975

PHYSICAL FITNESS
- Space flight research relevant to health, physical education, and recreation: With particular reference to Skylab's life science experiments [NASA-EP-148] N80-17697

PHYSIOCHEMISTRY
- Physio-chemical investigation of some areas of fundamental significance to biophysics [ORC-3018-T1] N80-16721

PHYSIOLOGICAL EFFECTS
- Training and acclimatization - Effects on responses to exercise in a desert environment A80-21539
- Central circulation and metabolism of the healthy man during postural exposures and arm exercise in the head-down position A80-21540
- Simulated weightlessness - Effects on bioenergetic balance A80-21544
- Physiological response to hyper- and hypogravity during rollercoaster flight A80-21547
- Effects of ingestion of cold and hot water on the course of thermal changes in the stomach and intestine [NASA-TM-75515] N80-16728
- USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 6, 1979 [JPRS-75041] N80-17674
- Objectives and conditions of physiological experiments on rats conducted aboard the Cosmos-936 biosatellite --- physiological effects of weightlessness and artificial gravity N80-17677
- Changes in the neuromotor system during 45 days of hypokinesia N80-17681
- Electrostimulation of muscles for the prevention of neuromuscular disorders during 45-day antiorthostatic hypokinesia N80-17682
- Effect of acute hypoxia on specific and nonspecific systems of the rabbit brain N80-17685
- Study of bioelectric activity of neuro-muscular and sympathetic systems during exposure to a steady magnetic field N80-17686
- Effects of strong infralow-frequency magnetic fields on bone marrow cell division N80-17687
- Effect of steady magnetic field on some aspects of energy and nitrogen metabolism in the rat cerebral hemispheres N80-17690
- Effect of rheopolyglucin on blood clotting factors of the aorta, myocardium and venae cavae during hypokinesia N80-17691
- Effects of accelerations on the early stage of radiation lesion in animals N80-17692
- Test irradiation of chronically irradiated dogs for evaluation of hemopoietic system function N80-17693
- Insoluble collagen content of dog tissues after exposure to low doses of chronic gamma radiation N80-17694
- Arousal from sleep: The uniqueness of an individual's response and the problem of noise control [NASA-CR-162747] N80-17695
- Space flight research relevant to health, physical education, and recreation: With particular reference to Skylab's life science experiments [NASA-EP-148] N80-17697
- The survival and protection of equipment in the event of accidental immersion in cold water --- physiological effects and cold acclimitazation [AGARD-AG-211-FR] N80-17702

PHYSIOLOGICAL RESPONSES
- Some problems of space medicine and international manned space flights A80-22840
- Calorimetric measurements of microwave energy absorption by mice after simultaneous exposure of 18 animals A80-22985
- Part-body and multibody effects on absorption of radio-frequency electromagnetic energy by animals and by models of man A80-22987
- Circularly polarized 2450-MHz waveguide system for chronic exposure of small animals to microwaves A80-22990
- Models of long-range order in cerebral macromolecules - Effects of sub-ELF and of modulated VHF and UHF fields A80-22994

PILOT ERROR
- Pilot error - Some laboratory experiments A80-23217

PILOT PERFORMANCE
- An investigation of landing accidents in relation to fatigue A80-23214
- An experimental study of mental fatigue A80-23216
- Effect of pretraining criterion on flight simulator and secondary cognitive task performance A80-24034
- Development and application of a task taxonomy for tactical flying A80-24035
- Validation of an in flight performance measurement methodology - F-4 ground attack training evaluation A80-24036
- Air combat maneuvering performance measurement A80-24037
- The development of objective inflight performance assessment procedures A80-24038
- Operator visual workload shifts as a function of vehicle stability A80-24041
- Evaluation of a pilot workload metric for simulated VTOL landing tasks A80-24042
- The use of color-coded symbols in a highly dense situation display A80-24045
- Optimal estimator model for human spatial orientation A80-24265
- Modeling pilot response delays to beacon collision avoidance system commands [AD-A075946] N80-16734

PILOT SELECTION
- The 1976 accident experience of civilian pilots with static physical defects A80-21552
- Improved pilot training through modification of selection and training procedures [FOA-C-55029-H7] N80-17698
- Compensatory and conjunctive processing of test information for prediction of results of military flight training [FOA-C-55025-H7] N80-17703
- Stepwise pilot selection: Procedure and validity [FOA-C-55026-H7] N80-17704
- Improved flight training methods [FOA-C-55028-H8] N80-17706

PILOT TRAINING
- The design and evaluation of complex systems - Application to a man-machine interface for aerial navigation A80-24032
- Improved pilot training through modification of selection and training procedures [FOA-C-55029-H7] N80-17698

The influence of the change of flight instruction and his ability upon the pupil's adaptation to flying
[FOA-C-55027-H8] N80-17705
Improved flight training methods
[FOA-C-55028-H8] N80-17706

PIONEER VENUS 2 ENTRY PROBES
New studies of Venus --- vanera satellites 11 and 12 explorations ; pioneer venus 2 entry probes
[NASA-TM-75931] N80-17666

PITUITARY GLAND
Growth hormone control of glucose oxidation pathways in hypophysectomized rats
A80-24222
Influence of x irradiation and diet on pituitary/thyroid function in the rat
[UR-3490-1674] N80-16722

PLANKTON
Factors influencing specific growth rates and seasonal abundance of eutrophic lake phytoplankton
N80-16716

PLANTS (BOTANY)
Residual nutational activity of the sunflower hypocotyl in simulated weightlessness
A80-21984

PLETHYSMOGRAPHY
An ultrasonic plethysmograph for space flight applications
A80-21553

POLYMERS
Method for separating biological cells --- suspended in aqueous polymer systems
[NASA-CASE-MFS-23883-1] N80-16715

PORPHYRINS
Method and apparatus for eliminating luminol interference material
[NASA-CASE-MSC-16260-1] N80-16714

PRESSURE EFFECTS
Oxygenation and ambient air pressure influences on alcohol-induced nystagmus in rabbits
A80-21543

PRIMITIVE EARTH ATMOSPHERE
'Acetonitrile' - A plausible source of amino acids on the primitive earth
A80-21781

PRODUCTION MANAGEMENT
Manned remote work station development article. Volume 3: Development test plan. Appendix A: Manufacturing requirements/schedule
[NASA-CR-160466] N80-17712

PRODUCTIVITY
Factors influencing specific growth rates and seasonal abundance of eutrophic lake phytoplankton
N80-16716

PROPULSION SYSTEM CONFIGURATIONS
Apparatus for endoscopic examination --- analysis of the propulsion system configuration and transmitter
[NASA-CASE-NPO-14092-1] N80-16725

PROSTHETIC DEVICES
Prosthetic device for correction of urinary incontinence
[NASA-TM-78255] N80-16739

PROTECTION
The survival and protection of equipment in the event of accidental immersion in cold water --- physiological effects and cold acclimitazation
[AGARD-AG-211-FR] N80-17702

PROTEIN METABOLISM
Insoluble collagen content of dog tissues after exposure to low doses of chronic gamma radiation
N80-17694

PROTEINS
Some neurochemical characteristics of rats during flight aboard the Cosmos-782 artificial satellite and after return to Earth
N80-17678

PSYCHOACOUSTICS
Loudness enhancement and decrement in four paradigms
A80-23047

PSYCHOLOGICAL EFFECTS
Aircrew stress in wartime operations --- Book
A80-23208
The historical background to wartime research in psychology in the Royal Air Force
A80-23209
Fluctuations in navigator performance during operational sorties
A80-23212
Some measures of the effect of operational stress on bomber crews
A80-23213

PSYCHOLOGICAL FACTORS
The influence of psychological disorder on efficiency in operational flying
A80-23211
The psychological aspects of airsickness
A80-23215

PSYCHOLOGICAL TESTS
Development of Performance Evaluation Tests for Environmental Research /PETER/ - Complex counting test
A80-21546
Loudness enhancement and decrement in four paradigms
A80-23047
Large color differences and the geometry of Munsell color space --- psychological experiment on vision scheme validity
A80-24136

PSYCHOLOGY
Aviation medicine. Volume 1 - Physiology and human factors --- Book
A80-24525

PSYCHOMETRICS
Compensatory and conjunctive processing of test information for prediction of results of military flight training
[FOA-C-55025-H7] N80-17703

PSYCHOMOTOR PERFORMANCE
The effect of propranolol on human psychomotor performance
A80-21550
Effects of fatigue from wearing the AN/PVS-5 night vision goggles on skills involved in helicopter operations
[AD-A075426] N80-17714

PSYCHOPHYSIOLOGY
An evaluation of heart rate during activity of high psychological and physiological stress --- German thesis
A80-21851

PULMONARY CIRCULATION
Central circulation and metabolism of the healthy man during postural exposures and arm exercise in the head-down position
A80-21540

PURSUIT TRACKING
Comparison of two techniques for the development and maintenance of tracking behavior in monkeys
A80-21541

PYROLYSIS
Anaerobic biological treatment of liquid wastes from pyrolysis processes
[COO-4455-2] N80-16723

R

RADIANT HEATING
Heating of spherical versus realistic models of human and infrahuman heads by electromagnetic waves
A80-22989

RADIATION DOSAGE
Calorimetric measurements of microwave energy absorption by mice after simultaneous exposure of 18 animals
A80-22985
A geometrical-optics and an exact solution for internal fields in and energy absorption by a cylindrical model of man irradiated by an electromagnetic plane wave
A80-22988
Circularly polarized 2450-MHz waveguide system for chronic exposure of small animals to microwaves
A80-22990
Effects of accelerations on the early stage of radiation lesion in animals
N80-17692
Proposed national exposure limits for microwave and radiofrequency radiation
[ISS-P-79/2] N80-17699
Intercomparison of ISS and BIPM primary exposure standards for medium energy X-rays
[ISS-R-79/3] N80-17700

RADIATION EFFECTS
Induction of calcium-ion efflux from brain tissue by radio-frequency radiation - Effects of modulation frequency and field strength A80-22992
Models of long-range order in cerebral macromolecules - Effects of sub-ELF and of modulated VHF and UHF fields A80-22994
Contraction of smooth muscle in a microwave field A80-22995
Operant behavior and rectal temperature of squirrel monkeys during 2.45-GHz microwave irradiation A80-22996
Influence of x irradiation and diet on pituitary/thyroid function in the rat [UR-3490-1674] N80-16722
Test irradiation of chronically irradiated dogs for evaluation of hemopoietic system function N80-17693
Insoluble collagen content of dog tissues after exposure to low doses of chronic gamma radiation N80-17694

RADIO FREQUENCIES
Models of long-range order in cerebral macromolecules - Effects of sub-ELF and of modulated VHF and UHF fields A80-22994

RADIO FREQUENCY HEATING
Calorimetric measurements of microwave energy absorption by mice after simultaneous exposure of 18 animals A80-22985
Part-body and multibody effects on absorption of radio-frequency electromagnetic energy by animals and by models of man A80-22987

RADIO WAVES
Proposed national exposure limits for microwave and radiofrequency radiation [ISS-P-79/2] N80-17699

RADIOACTIVE ISOTOPES
Effects of exercise training on left ventricular function in normal subjects - A longitudinal study by radionuclide angiography A80-23975

RADIOBIOLOGY
A geometrical-optics and an exact solution for internal fields in and energy absorption by a cylindrical model of man irradiated by an electromagnetic plane wave A80-22988
Induction of calcium-ion efflux from brain tissue by radio-frequency radiation - Effects of modulation frequency and field strength A80-22992
Extremely-low-frequency fields and the slime mold Physarum polycephalum - Evidence of depressed cellular function and of internuclear interaction A80-22993
Models of long-range order in cerebral macromolecules - Effects of sub-ELF and of modulated VHF and UHF fields A80-22994
Contraction of smooth muscle in a microwave field A80-22995
Operant behavior and rectal temperature of squirrel monkeys during 2.45-GHz microwave irradiation A80-22996
Skilled visual-motor performance by monkeys in a 1.2-GHz microwave field A80-22997

REACTION KINETICS
Theoretical studies of the light reactions in photosynthesis N80-16717

RECREATION
Space flight research relevant to health, physical education, and recreation: With particular reference to Skylab's life science experiments [NASA-EP-148] N80-17697

RECURSIVE FUNCTIONS
Recursive solution to the equations of motion of an N-link manipulator A80-23996

REGRESSION ANALYSIS
Empirical Bayes estimation of critical dosages having smallest predictive risk [AD-A074376] N80-16729

REMOTE HANDLING
Recursive solution to the equations of motion of an N-link manipulator A80-23996
Manned remote work station development article, executive summary [NASA-CR-160462] N80-17708
Manned remote work station development article. Volume 1, book 1: Flight article requirements. Appendix A: Mission requirements [NASA-CR-160463] N80-17709
Manned remote work station development article. Volume 1, book 2, appendix B: Trade and design definition studies [NASA-CR-160464] N80-17710
Manned remote work station development article. Volume 2: Simulation requirements. Appendix A: Open cherry picker development test articles specification [NASA-CR-160465] N80-17711
Manned remote work station development article. Volume 3: Development test plan. Appendix A: Manufacturing requirements/schedule [NASA-CR-160466] N80-17712

REMOTE MANIPULATOR SYSTEM
Superman: A system for supervisory manipulation and the study of human/computer interactions [PB-301290/3] N80-17716

RENAL FUNCTION
Effects of minimal gravitational loads on fluid-electrolyte metabolism and renal function of man during prolonged immersion N80-17679

RESPIRATION
The effects of long-term intoxication by the inhalation of gaseous HF on myocardial cell metabolism and serum cardiac enzyme levels in guinea pigs A80-22124

RESPIRATORY RATE
Extremely-low-frequency fields and the slime mold Physarum polycephalum - Evidence of depressed cellular function and of internuclear interaction A80-22993

RESPIRATORY SYSTEM
Deposition of hygroscopic atmospheric aerosol particles in the human respiratory tract A80-23745

RETINA
Permeability changes in cerebral, iridic, and retinal vessels during experimental decompression sickness in the rat A80-21545

RETINAL ADAPTATION
Adapting to two orientations - Disinhibition in a visual aftereffect A80-22967

RHEOLOGY
Effect of rheopolyglucin on blood clotting factors of the aorta, myocardium and venae cavae during hypokinesia N80-17691

RIBONUCLEIC ACIDS
RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization [NASA-TM-76032] N80-17670
Some neurochemical characteristics of rats during flight aboard the Cosmos-782 artificial satellite and after return to Earth N80-17678

ROTARY WING AIRCRAFT
The development of objective inflight performance assessment procedures A80-24038

ROTATION
Perturbation of induced rotation as an index of pattern structure --- for visual stimuli A80-24047

S

SACCADIC EYE MOVEMENTS
Information used by the perceptual and oculomotor systems regarding the amplitude of saccadic and pursuit eye movements
A80-22971

SAFETY DEVICES
Evaluation of commercially available laser protective eyewear
[PB80-103039] N80-16741

SEARCHING
The effect of image quality on search for static and dynamic targets - MTFA-performance correlations
A80-24040
Visual search and color coding
A80-24044

SENSORIMOTOR PERFORMANCE
Skilled visual-motor performance by monkeys in a 1.2-GHz microwave field
A80-22997
Multi-modal information processing for visual workload relief
[NASA-CR-162720] N80-16737
RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization
[NASA-TM-76032] N80-17670

SKIN (ANATOMY)
Development of percutaneous energy transmission systems
[PB-299739/3] N80-16731
Development of precutaneous energy transmission
[PB-300518/8] N80-16732

SKYLAB PROGRAM
Man-machine analysis of translation and work tasks of Skylab films
A80-24029
Space flight research relevant to health, physical education, and recreation: With particular reference to Skylab's life science experiments
[NASA-SP-148] N80-17697

SLEEP
Arousal from sleep: The uniqueness of an individual's response and the problem of noise control
[NASA-CR-162747] N80-17695

SODIUM BROMIDES
Morphological and functional manifestations of rat adrenal-cortex response to sodium bromide administration under hypodynamic stress
[NASA-TM-75953] N80-16719

SPACE FLIGHT STRESS
An ultrasonic plethysmograph for space flight applications
A80-21553
Some problems of space medicine and international manned space flights
A80-22840
USSR Report: Space Biology and Aerospace Medicine, volume 14, no. 6, 1979
[JPRS-75041] N80-17674
Composition of intestinal microflora of cosmonauts before and after space flights
N80-17676
Some neurochemical characteristics of rats during flight aboard the Cosmos-782 artificial satellite and after return to Earth
N80-17678
Changes in the neuromotor system during 45 days of hypokinesia
N80-17681

SPACE LABORATORIES
Space flight research relevant to health, physical education, and recreation: With particular reference to Skylab's life science experiments
[NASA-SP-148] N80-17697

SPACE PERCEPTION
Optimal estimator model for human spatial orientation
A80-24265

SPACE SHUTTLE ORBITERS
Operator Station Design System - A computer aided design approach to work station layout
A80-24028
Manned remote work station development article, executive summary
[NASA-CR-160462] N80-17708
Manned remote work station development article. Volume 1, book 1: Flight article requirements. Appendix A: Mission requirements
[NASA-CR-160463] N80-17709
Manned remote work station development article. Volume 1, book 2, appendix B: Trade and design definition studies
[NASA-CR-160464] N80-17710
Manned remote work station development article. Volume 2: Simulation requirements. Appendix A: Open cherry picker development test articles specification
[NASA-CR-160465] N80-17711
Manned remote work station development article. Volume 3: Development test plan. Appendix A: Manufacturing requirements/schedule
[NASA-CR-160466] N80-17712

SPACE SHUTTLES
System design features of the Space Shuttle remote manipulator
A80-23993

SPACEBORNE EXPERIMENTS
Development of display design and command usage guidelines for Spacelab experiment computer applications
A80-24031

SPACECRAFT CONTROL
System design features of the Space Shuttle remote manipulator
A80-23993

SPACECRAFT DESIGN
System design features of the Space Shuttle remote manipulator
A80-23993
Operator Station Design System - A computer aided design approach to work station layout
A80-24028

SPACECRAFT ENVIRONMENTS
Biomedical systems analysis program
[NASA-CR-160456] N80-17696

SPACECREWS
Man-machine analysis of translation and work tasks of Skylab films
A80-24029

SPACELAB
Development of display design and command usage guidelines for Spacelab experiment computer applications
A80-24031

SPINAL CORD
RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization
[NASA-TM-76032] N80-17670

STANDARDS
Research related to the expansion and improvement of human vibration exposure criteria
N80-16217

STATISTICAL ANALYSIS
Clinical and statistical study of neurosis precipitated by flying duties
A80-23210

STRESS (PHYSIOLOGY)
An evaluation of heart rate during activity of high psychological and physiological stress --- German thesis
A80-21851
Peripheral vision and tracking performance under stress
A80-24046
Glucose metabolism in different regions of the rat brain under hypokinetic stress influence
[NASA-TM-75949] N80-16718
Morphological and functional manifestations of rat adrenal-cortex response to sodium bromide administration under hypodynamic stress
[NASA-TM-75953] N80-16719
Effect of gravitation stress and hypokinesia on blood vessels of the testicle
[NASA-TM-75942] N80-16726
A study of occupational heat stress by analysis of environmental and human factors
N80-16735

Effects of fatigue from wearing the AN/PVS-5 night vision goggles on skills involved in helicopter operations
[AD-A075426] N80-17714

STRESS (PSYCHOLOGY)
An evaluation of heart rate during activity of high psychological and physiological stress --- German thesis
A80-21851
Aircrew stress in wartime operations --- Book
A80-23208
The historical background to wartime research in psychology in the Royal Air Force
A80-23209
Fluctuations in navigator performance during operational sorties
A80-23212
Some measures of the effect of operational stress on bomber crews
A80-23213
Peripheral vision and tracking performance under stress
A80-24046

SULFATES
Microbial sulfate reduction measured by an automated electrical impedance technique
A80-21982

SUPINE POSITION
Central circulation and metabolism of the healthy man during postural exposures and arm exercise in the head-down position
A80-21540

SURVIVAL
The survival and protection of equipment in the event of accidental immersion in cold water --- physiological effects and cold acclimatization
[AGARD-AG-211-FR] N80-17702

SWEDEN
Stepwise pilot selection: Procedure and validity
[FOA-C-55026-H7] N80-17704

T

TACAN
Data analysis methodology for day/night inflight tactical navigation
A80-24050

TARGET RECOGNITION
The effect of image quality on search for static and dynamic targets - MTFA-performance correlations
A80-24040
Visual search and color coding
A80-24044

TASK COMPLEXITY
Development of Performance Evaluation Tests for Environmental Research /PETER/ - Complex counting test
A80-21546
Effect of pretraining criterion on flight simulator and secondary cognitive task performance
A80-24034

TASKS
Development and application of a task taxonomy for tactical flying
A80-24035

TAXONOMY
Development and application of a task taxonomy for tactical flying
A80-24035

TELEOPERATORS
System design features of the Space Shuttle remote manipulator
A80-23993

TEMPERATURE EFFECTS
Physiological and hygienic aspects of the effects of high and low temperatures --- Russian book
A80-23079

TERRAIN FOLLOWING AIRCRAFT
Data analysis methodology for day/night inflight tactical navigation
A80-24050

TEST EQUIPMENT
Actual vs simulated equipment for aircraft maintenance training - Cost implications of the incremental vs the unique device
A80-24039

TESTES
Effect of gravitation stress and hypokinesia on blood vessels of the testicle
[NASA-TM-75942] N80-16726

THERMAL ABSORPTION
Calorimetric measurements of microwave energy absorption by mice after simultaneous exposure of 18 animals
A80-22985

THERMAL ENERGY
Implanted energy conversion system
[PB80-101116] N80-16733

THERMODYNAMIC PROPERTIES
Thermal history, chemical composition and relationship of comets to the origin of life
A80-24492

THERMODYNAMICS
Thermodynamic considerations in the support of life for long space voyages
[NASA-CR-162755] N80-16738

THERMOREGULATION
Effect of alcohol ingestion on man's thermoregulatory responses during cold water immersion
A80-21548
Physiological and hygienic aspects of the effects of high and low temperatures --- Russian book
A80-23079

THYROID GLAND
Catecholamines and myocardial contractile function during hypodynamia and with an altered thyroid hormone balance
[NASA-TM-76000] N80-16720
Influence of x irradiation and diet on pituitary/thyroid function in the rat
[UR-3490-1674] N80-16722

TIME LAG
Modeling pilot response delays to beacon collision avoidance system commands
[AD-A075946] N80-16734

TISSUES (BIOLOGY)
Induction of calcium-ion efflux from brain tissue by radio-frequency radiation - Effects of modulation frequency and field strength
A80-22992

TOLERANCES (PHYSIOLOGY)
Ecological physiology of the brain --- Russian book
A80-21421

TOXIC HAZARDS
The effects of long-term intoxication by the inhalation of gaseous HF on myocardial cell metabolism and serum cardiac enzyme levels in guinea pigs
A80-22124

TOXICOLOGY
The toxicology of ozone. A bibliography with abstracts
[PB80-800881] N80-17701

TRACKING (POSITION)
Peripheral vision and tracking performance under stress
A80-24046

TRAINING ANALYSIS
Improved pilot training through modification of selection and training procedures
[FOA-C-55029-H7] N80-17698
Compensatory and conjunctive processing of test information for prediction of results of military flight training
[FOA-C-55025-H7] N80-17703

TRAINING DEVICES
Actual vs simulated equipment for aircraft maintenance training - Cost implications of the incremental vs the unique device
A80-24039

TRAINING EVALUATION
Effect of pretraining criterion on flight simulator and secondary cognitive task performance
A80-24034
Validation of an in flight performance measurement methodology - F-4 ground attack training evaluation
A80-24036
Air combat maneuvering performance measurement
A80-24037
The development of objective inflight performance assessment procedures
A80-24038

TRANSMITTERS
Apparatus for endoscopic examination --- analysis of the propulsion system configuration and transmitter [NASA-CASE-NPO-14092-1] N80-16725

U

ULTRASONIC TESTS
An ultrasonic plethysmograph for space flight applications A80-21553

UNDERWATER VEHICLES
Superman: A system for supervisory manipulation and the study of human/computer interactions [PB-301290/3] N80-17716

UNITS OF MEASUREMENT
Intercomparison of ISS and BIPM primary exposure standards for medium energy X-rays [ISS-R-79/3] N80-17700

URINE
Creatinuria in man during prolonged hypokinesia N80-17680

UROLOGY
Prosthetic device for correction of urinary incontinence [NASA-TM-78255] N80-16739

V

VECTOR ANALYSIS
Vector model for normal and dichromatic color vision A80-24135

VENERA SATELLITES
New studies of Venus --- venera satellites 11 and 12 explorations ; pioneer venus 2 entry probes [NASA-TM-75931] N80-17666

VENUS (PLANET)
New studies of Venus --- venera satellites 11 and 12 explorations ; pioneer venus 2 entry probes [NASA-TM-75931] N80-17666

VENUS ATMOSPHERE
New studies of Venus --- venera satellites 11 and 12 explorations ; pioneer venus 2 entry probes [NASA-TM-75931] N80-17666

VERTICAL TAKEOFF AIRCRAFT
Evaluation of a pilot workload metric for simulated VTOL landing tasks A80-24042

VESTIBULAR NYSTAGMUS
Influence of mobility restriction on habituation of the vestibular apparatus [NASA-TM-75995] N80-17669

VESTIBULAR TESTS
Effect of vestibular stimuli on visual tracking in a limited tracking area N80-17683

VIBRATION
Whole-body vibration of heavy equipment operators N80-16216
Research related to the expansion and improvement of human vibration exposure criteria N80-16217

VISION
Adapting to two orientations - Disinhibition in a visual aftereffect A80-22967

VISUAL ACUITY
Large color differences and the geometry of Munsell color space --- psychological experiment on vision scheme validity A80-24136

VISUAL CONTROL
The visual scene perception process involved in manual approach landing [NLR-TR-78130-U] N80-17715

VISUAL DISCRIMINATION
Perturbation of induced rotation as an index of pattern structure --- for visual stimuli A80-24047

VISUAL FIELDS
Peripheral vision and tracking performance under stress A80-24046

VISUAL PERCEPTION
Linear summation of tilt illusion and tilt aftereffect A80-22969
Information used by the perceptual and oculomotor systems regarding the amplitude of saccadic and pursuit eye movements A80-22971
Role of interoceptive afferentation in function of the cortex of the visual analyzer N80-17684
The visual scene perception process involved in manual approach landing [NLR-TR-78130-U] N80-17715

VISUAL STIMULI
Additivity of fusional vergence and pursuit eye movements A80-22970
Perturbation of induced rotation as an index of pattern structure --- for visual stimuli A80-24047
Effect of vestibular stimuli on visual tracking in a limited tracking area N80-17683

VISUAL TASKS
Skilled visual-motor performance by monkeys in a 1.2-GHz microwave field A80-22997
The effect of image quality on search for static and dynamic targets - MTFA-performance correlations A80-24040
Operator visual workload shifts as a function of vehicle stability A80-24041
A review of literature relating to visual fatigue A80-24043
Visual search and color coding A80-24044
The use of color-coded symbols in a highly dense situation display A80-24045

W

WALKING
Simulation of walking under conditions of weightlessness A80-21094
Planar biped dynamics and control N80-16736

WARFARE
Aircrew stress in wartime operations --- Book A80-23208
The historical background to wartime research in psychology in the Royal Air Force A80-23209

WASTE TREATMENT
Anaerobic biological treatment of liquid wastes from pyrolysis processes [COO-4455-2] N80-16723

WATER TEMPERATURE
Effects of ingestion of cold and hot water on the course of thermal changes in the stomach and intestine [NASA-TM-75515] N80-16728

WAVEGUIDES
Circularly polarized 2450-MHz waveguide system for chronic exposure of small animals to microwaves A80-22990

WEAPONS DELIVERY
Validation of an in flight performance measurement methodology - F-4 ground attack training evaluation A80-24036

WEIGHTLESSNESS
Some problems of space medicine and international manned space flights A80-22840
Objectives and conditions of physiological experiments on rats conducted aboard the Cosmos-936 biosatellite --- physiological effects of weightlessness and artificial gravity N80-17677

WEIGHTLESSNESS SIMULATION
Simulation of walking under conditions of weightlessness A80-21094
Simulated weightlessness - Effects on bioenergetic balance A80-21544

Residual nutational activity of the sunflower hypocotyl in simulated weightlessness
A80-21984

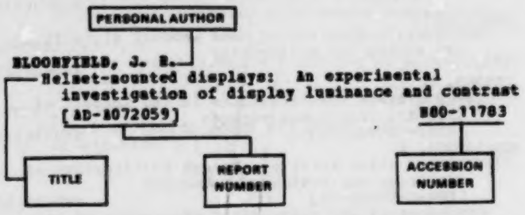
WORKLOADS (PSYCHOPHYSIOLOGY)
Operator visual workload shifts as a function of vehicle stability
A80-24041
Evaluation of a pilot workload metric for simulated VTOL landing tasks
A80-24042

blank page

PERSONAL AUTHOR INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 206)* **MAY 1980**

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ADEY, W. R.
Models of long-range order in cerebral macromolecules - Effects of sub-ELF and of modulated VHF and UHF fields
A80-22994

AESCHLEMAN, S. E.
Comparison of two techniques for the development and maintenance of tracking behavior in monkeys
A80-21541

AGADZHANYAN, N. A.
Some philosophical aspects of the problem of man, the biosphere and space
N80-17675

AKOPYAN, N. S.
Effect of acute hypoxia on specific and nonspecific systems of the rabbit brain
N80-17685

ALLEN, S. J.
Calorimetric measurements of microwave energy absorption by mice after simultaneous exposure of 18 animals
A80-22985

Skilled visual-motor performance by monkeys in a 1.2-GHz microwave field
A80-22997

ANTIPOV, V. V.
Effects of accelerations on the early stage of radiation lesion in animals
N80-17692

ARMSTRONG, W. W.
Recursive solution to the equations of motion of an N-link manipulator
A80-23996

ASBURRY, W. C.
Whole-body vibration of heavy equipment operators
N80-16216

AZHAEV, A. N.
Physiological and hygienic aspects of the effects of high and low temperatures
A80-23079

B

BABIYAK, V. I.
Effect of vestibular stimuli on visual tracking in a limited tracking area
N80-17683

BAKLAVADZHYAN, O. G.
Effect of acute hypoxia on specific and nonspecific systems of the rabbit brain
N80-17685

BALDRIGHI, G.
Physiological response to hyper- and hypogravity during rollercoaster flight
A80-21547

BARANSKI, S.
Some problems of space medicine and international manned space flights
A80-22840

BARRY, W. H.
The theory and application of magnetocardiography
A80-24348

BASON, R.
Trapped gas dysbarism requiring recompression therapy
A80-21551

BATINKOV, Y. L.
Effects of ingestion of cold and hot water on the course of thermal changes in the stomach and intestine
[NASA-TM-75515] N80-16728

BAULK, K.
Effect of alcohol ingestion on man's thermoregulatory responses during cold water immersion
A80-21548

BAWIN, S. M.
Models of long-range order in cerebral macromolecules - Effects of sub-ELF and of modulated VHF and UHF fields
A80-22994

BELETSKII, V. V.
Simulation of walking under conditions of weightlessness
A80-21094

BELYAVIN, A. J.
Large color differences and the geometry of Munsell color space
A80-24136

BENANE, S. G.
Induction of calcium-ion efflux from brain tissue by radio-frequency radiation - Effects of modulation frequency and field strength
A80-22992

BENNETT, A.
Implanted energy conversion system
[PB80-101116] N80-16733

BENSEL, C. K.
Human Factors Society, Annual Meeting, 23rd, Boston, Mass., October 29-November 1, 1979, Proceedings
A80-24026

BENZSCHAWEL, T.
Vector model for normal and dichromatic color vision
A80-24135

BERINGER, D. B.
The design and evaluation of complex systems - Application to a man-machine interface for aerial navigation
A80-24032

BERMUDEZ, J. M.
Peripheral vision and tracking performance under stress
A80-24046

BERNHEIM, A., JR.
Loudness enhancement and decrement in four paradigms
A80-23047

BERNSTEIN, I.
Development of percutaneous energy transmission systems
[PB-299739/3] N80-16731

BHAGAT, P. K.
An ultrasonic plethysmograph for space flight applications
A80-21553

BIALIK, G.
Empirical Bayes estimation of critical dosages having smallest predictive risk
[AD-A074376] N80-16729

BILLMANN, B.
Modeling pilot response delays to beacon collision avoidance system commands
[AD-A075946] N80-16734

BITTNER, A. C., JR.
Development of Performance Evaluation Tests for Environmental Research /PETER/ - Complex counting test
A80-21546

BLACKMAN, C. F.
Induction of calcium-ion efflux from brain tissue by radio-frequency radiation - Effects of modulation frequency and field strength
A80-22992
Contraction of smooth muscle in a microwave field
A80-22995

BOELTER, J. G.
Man-machine analysis of translation and work tasks of Skylab films
A80-24029

BOISMARE, F.
Blockade of the different enzymatic steps in the synthesis of brain amines and memory /CAR/ in hypobaric hypoxic rats treated and untreated with L. Dopa
A80-21542

BOOZE, C. F.
The 1976 accident experience of civilian pilots with static physical defects
A80-21552

BORAH, J.
Optimal estimator model for human spatial orientation
A80-24265

BOURBON, P.
The effects of long-term intoxication by the inhalation of gaseous HF on myocardial cell metabolism and serum cardiac enzyme levels in guinea pigs
A80-22124

BOUTELIER, C.
The survival and protection of equipment in the event of accidental immersion in cold water
[AGARD-AG-211-FR] N80-17702

BOWMAN, D.
An ultrasonic plethysmograph for space flight applications
A80-21553

BRABEC, R.
Development of percutaneous energy transmission systems
[PB-299739/3] N80-16731

BRITVAN, I. I.
Objectives and conditions of physiological experiments on rats conducted aboard the Cosmos-936 biosatellite
N80-17677

BROADHURST, A. D.
The effect of propranolol on human psychomotor performance
A80-21550

BROOKS, D. E.
Method for separating biological cells
[NASA-CASE-MFS-23883-1] N80-16715

BROOKS, T. L.
Superman: A system for supervisory manipulation and the study of human/computer interactions
[PB-301290/3] N80-17716

BROWN, A. H.
Residual nutational activity of the sunflower hypocotyl in simulated weightlessness
A80-21984

BRUMBERG, V. A.
RNA content in motor and sensory neurons and surrounding neuroglia of mouse spinal cord under conditions of hypodynamia and following normalization
[NASA-TM-76032] N80-17670

BURKE, M. W.
Multi-modal information processing for visual workload relief
[NASA-CR-162720] N80-16737

BURKOVSKAYA, T. Y.
Test irradiation of chronically irradiated dogs for evaluation of hemopoietic system function
N80-17693

BYNUM, J. A.
Data analysis methodology for day/night inflight tactical navigation
A80-24050

C

CALLEY, D. J.
A study of occupational heat stress by analysis of environmental and human factors
N80-16735

CANN, C.
Noninvasive measures of bone bending rigidity in the monkey /M. nemestrina/
A80-21988

CARDON, S. Z.
Thermodynamic considerations in the support of life for long space voyages
[NASA-CR-162755] N80-16738

CARLSTEDT, L.
Improved pilot training through modification of selection and training procedures
[FOA-C-55029-H7] N80-17698
Compensatory and conjunctive processing of test information for prediction of results of military flight training
[FOA-C-55025-H7] N80-17703
Stepwise pilot selection: Procedure and validity
[FOA-C-55026-H7] N80-17704
The influence of the change of flight instruction and his ability upon the pupil's adaptation to flying
[FOA-C-55027-H8] N80-17705
Improved flight training methods
[FOA-C-55028-H8] N80-17706

CARTER, R. C., JR.
Visual search and color coding
A80-24044

CASNATI, E.
Intercomparison of ISS and BIPM primary exposure standards for medium energy X-rays
[ISS-R-79/3] N80-17700

CERANOWICZ, A. Z.
Planar biped dynamics and control
N80-16736

CHAPMAN, D. K.
Residual nutational activity of the sunflower hypocotyl in simulated weightlessness
A80-21984

CHASTAIN, G. D.
Effects of fatigue from wearing the AN/PVS-5 night vision goggles on skills involved in helicopter operations
[AD-A075426] N80-17714

CHEN, K.-M.
Heating of spherical versus realistic models of human and infrahuman heads by electromagnetic waves
A80-22989

CHEREMNYKH, P. A.
Effects of strong infralow-frequency magnetic fields on bone marrow cell division
N80-17687

CHESTUKHIN, V. V.
Central circulation and metabolism of the healthy man during postural exposures and arm exercise in the head-down position
A80-21540

CHILDS, J. M.
The development of objective inflight performance assessment procedures
A80-24038

CIARKOWSKI, A. A.
Development of percutaneous energy transmission systems
[PB-299739/3] N80-16731

CLARK, J. W., JR.
A two-stage identification scheme for the determination of the parameters of a model of left heart and systemic circulation
A80-22972

COLE, J. S.
A two-stage identification scheme for the determination of the parameters of a model of left heart and systemic circulation
A80-22972

CONRAD, R. F.
Data analysis methodology for day/night inflight tactical navigation
A80-24050

CONNELLY, E. M.
Data analysis methodology for day/night inflight tactical navigation
A80-24050

CONSTABLE, S. H.
Training and acclimatization - Effects on responses to exercise in a desert environment
A80-21539

CRONNOVER, J. C.
Simulated weightlessness - Effects on bioenergetic balance
A80-21544

CURRY, R. E.
Optimal estimator model for human spatial orientation
A80-24265

D

DAGUE, R. R.
Anaerobic biological treatment of liquid wastes from pyrolysis processes
[COO-4455-2] N80-16723

DALY, H. D. T.
Development of precutaneous energy transmission
[PB-300518/8] N80-16732

DANDREA, J. A.
Part-body and multibody effects on absorption of radio-frequency electromagnetic energy by animals and by models of man
A80-22987

DAULERIO, L. A.
Bioman - An improved occupant-crew station compliance modeling system
A80-21549

DAVIS, D. R.
Pilot error - Some laboratory experiments
A80-23217

DAVYDOV, B. I.
Effects of accelerations on the early stage of radiation lesion in animals
N80-17692

DE LORGE, J.
Operant behavior and rectal temperature of squirrel monkeys during 2.45-GHz microwave irradiation
A80-22996

DEARNALEY, E. J.
Aircrew stress in wartime operations
A80-23208

DEMAIO, J.
Validation of an in flight performance measurement methodology - F-4 ground attack training evaluation
A80-24036

DEMIN, N. N.
Some neurochemical characteristics of rats during flight aboard the Cosmos-782 artificial satellite and after return to Earth
N80-17678

DHENIN, G.
Aviation medicine. Volume 1 - Physiology and human factors
A80-24525

DILLE, J. R.
The 1976 accident experience of civilian pilots with static physical defects
A80-21552

DINGUS, J.
Perturbation of induced rotation as an index of pattern structure
A80-24047

DINGUS, T.
Perturbation of induced rotation as an index of pattern structure
A80-24047

DODSON, D. W.
Development of display design and command usage guidelines for Spacelab experiment computer applications

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley

COLORADO
University of Colorado, Boulder

DISTRICT OF COLUMBIA
Library of Congress

GEORGIA
Georgia Institute of Technology, Atlanta

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 207)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in May 1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

NASA Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, at the price $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 184 reports, articles and other documents announced during May 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche (1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $65.00 domestic; $130.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

EXTENDED DURATION ORBITER STUDY: CO2 REMOVAL AND WATER RECOVERY Final Report
R. D. Marshall, C. S. Ellis, F. H. Schubert, and R. A. Wynveen
May 1979 91 p refs
(Contract NAS9-15218)
(NASA-CR-160317; LSI-ER-319-24) Avail: NTIS
HC A05/MF A01 CSCL 06K

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. IAA ENTRIES

A80-25026 # Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference (Obshchnost' svoistv bakterial'nogo i zritel'nogo rodopsinov - Prevrashchenie energii sveta v raznost' elektricheskikh potentsialov). V. I. Bol'shakov, A. L. Drachev, L. A. Drachev, G. R. Kalamkarov, A. D. Kaulen, M. A. Ostrovskii, and V. P. Skulachev (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki; Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Akademiia Nauk SSSR, Doklady,* vol. 249, no. 6, 1979, p. 1462-1466. 15 refs. In Russian.

A80-25175 Effects of fasting and refeeding on the metabolic response to a standard meal in man. M. J. Stock (Queen Elizabeth College, London, England). *European Journal of Applied Physiology,* vol. 43, no. 1, 1980, p. 35-40. 16 refs.

Measurements of resting and exercising metabolic rate were made on eight subjects (five male, three female) before and after consumption of a standard liquid meal (1.67 MJ). This test was conducted after a day of complete fast and again after a day of overeating (average intake 19.8 MJ). There were no significant changes in resting or exercising metabolic rate due to the previous day's energy intake. The resting thermic effect (post-prandial rise in metabolic rate) of the standard meal was similar on both test days but the exercising thermic effect was 50% greater after the day of overeating. It was concluded that the metabolic response to food in exercising subjects may be affected by the previous day's energy intake but the overall energetic efficiency of the body at rest and during exercise is unaffected. (Author)

A80-25201 * Cyanamide mediated synthesis under plausible primitive earth conditions. VI - The synthesis of glycerol and glycerophosphates. D. E. Epps, D. W. Nooner, J. Eichberg, E. Sherwood, and J. Oro (Houston, University, Houston, Tex.). *Journal of Molecular Evolution,* vol. 14, Dec. 1979, p. 235-241. 9 refs. Research supported by the Robert A. Welch Foundation; Grants No. NIH-NS-12493; No. NGR-44-005-002.

The formation of glycerol occurs when a solution of DL-glyceraldehyde is heated in the presence of hydrogen sulfide at room temperature. DL-glyceraldehyde and dihydroxyacetone treated with hydrazine, as well as DL-glyceraldehyde incubated with formaldehyde are also partially converted to glycerol. The yields of the above reactions are from approximately 1% to about 3%. The formation of glycerophosphates occurs when glycerol is heated with ammonium dihydrogen phosphate and either urea or cyanamide. The yield of glycerophosphates is about 30%, most of which is sn-glycero-1(3)-phosphate. These findings indicate that glycerol and sn-glycero-3-phosphate, which are moieties of glycerolipids, could have been formed under conditions which may have prevailed on the primitive earth. (Author)

A80-25202 * Self-condensation of activated dinucleotides on polynucleotide templates with alternating sequences. R. Lohrmann and L. E. Orgel (Salk Institute for Biological Studies, San Diego, Calif.). *Journal of Molecular Evolution,* vol. 14, Dec. 1979, p. 243-250. 13 refs. Grants No. NGR-05-067-001; No. NIH-GM-13435.

Substantial quantities of the alternating polymers poly(U-G) and poly(C-A) have been prepared and used as templates for the self-condensation of ImpApC, ImpCpA, ImpGpU and ImpUpG. It is found that the condensation of ImpGpu and ImpUpG on poly(C-A) is efficient, the condensation of ImpCpA on poly(U-G) is moderately efficient, while the condensation of ImpApC on poly(U-C) proceeds poorly. In many cases, the product is predominantly 3'-5'-linked. These reactions demonstrate unequivocally, for the first time, that template-directed reactions occur in double-helical structures. Furthermore, they describe for the first time a pair of reactions in which each of two complementary polymers facilitates the synthesis of the other. The prebiotic significance of these findings is discussed. (Author)

A80-25283 Study of physiological effects of weightlessness and artificial gravity in the flight of the biosatellite Cosmos-936. N. N. Gurovskii, O. G. Gazenko, B. A. Adamovich, E. A. Il'in, A. M. Genin, V. I. Korolkov, A. A. Shipov, A. R. Kotovskaia, V. A. Kondrat'eva, and L. V. Serova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Acta Astronautica,* vol. 7, Jan. 1980, p. 113-121. 8 refs.

The physiological effects of weightlessness and artificial gravity on rats were investigated during the 18.5-day flight of the biosatellite Cosmos 936. Twenty male rats were exposed to the normal weightless environment of the satellite, while 10 were placed in centrifuges producing an artificial gravity of 1 g during the flight. The motor activity of the weightless rats during the flight was observed to be greater than that of the centrifuged rats, while their body temperature was significantly lower. Postflight examination of the weightless animals revealed a decrease in gas exchange, changes in electrolyte metabolism, disturbed otolith and postural equilibrium functions, a moderate stress reaction, muscular atrophy and metabolic disorders, bone degeneration and demineralization, increased sarcoplasmic protein content and decreased myocardial myosin ATPase activity. The centrifuged animals were found to exhibit little or none of these changes, however were not protected against changes in certain vestibular functions and bone metabolism. It is concluded that, in general, artificial gravity seems to be an effective countermeasure against the most serious adverse effects of prolonged weightlessness. A.L.W.

A80-25677 # Analysis of mental load by applying polynomially related measurement structures (Die Analyse der mentalen Beanspruchung mittels polynomisch verbundener Messstrukturen). R. Pursian. Braunschweig, Technische Universität, Naturwissenschaftliche Fakultät, Doktor der Naturwissenschaften Dissertation, 1979. 141 p. 63 refs. In German.

The purpose of the work is to determine how information is processed in determining the mental load and the factors that involve mental processes when applying a polynomially related measurement structure. Attention is given to methods and models of human information processes by Broadbent, Sternberg, and Kahneman as well as to the mathematical axioms of singular and collective independence and double and distributive reduction. An experiment is conducted to analyze the mental load when more than one mental activity is occurring. C.F.W.

A80-25725 Ventilatory control during exercise with increased external dead space. S. A. Ward and B. J. Whipp (Liverpool, University, Liverpool, England; California, University, Los Angeles; California, University, Medical Center, Torrance, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, Feb. 1980, p. 225-231. 30 refs.

The effects of increased external dead space on ventilatory control in steady-state exercise were determined in three healthy adults. The subjects performed cycle ergometer exercise on six occasions, each with a different external dead space (range: 0.1-1.0 l); work rate was increased every 5 min by 15-20 W. Minute ventilation, CO2 output, and mean alveolar CO2 tension were measured in the steady state. Without external dead space, the minute ventilation-CO2 output relationship was linear, having a small positive minute ventilation intercept, and the mean alveolar CO2 tension was constant, independent of the CO2 output. Increased external dead space was associated with an upward shift of the minute ventilation-CO2 output relationship, and an elevated mean alveolar CO2 tension, again independent of CO2 output. At each work rate, the increases in minute ventilation accompanying increased external dead space were no greater than could be expected from a conventional CO2 inhalation study. It is concluded that increasing external dead space does not impair the ability of the human respiratory system to regulate the mean alveolar CO2 tension during exercise except for resetting the regulated CO2 tension level. (Author)

A80-25763 # Comparison of physiological responses to hypoxia at high altitudes between highlanders and lowlanders. Z. Shi, X. Ning, P. Huang, S. Zhu, D. Zhao (Academia Sinica, Physiology Institute, Shanghai, Communist China), S. Yang, Y. Wang, and Z. Dong (People's Liberation Army, Communist China). *Scientia Sinica*, vol. 22, Dec. 1979, p. 1455-1469. 22 refs.

A80-25822 Detection of coronary artery disease - Comparison of exercise stress radionuclide angiocardiography and thallium stress perfusion scanning. J. A. Jengo, R. Freeman, M. Brizendine, and I. Mena (California, University, Los Angeles Medical Center, Torrance; St. Mary Medical Center, Long Beach, Calif.). *American Journal of Cardiology*, vol. 45, Mar. 1980, p. 535-541. 25 refs.

Exercise thallium scanning and stress radionuclide angiography were compared in 16 normal subjects and 42 patients with more than 75% coronary arterial obstruction in studies using upright exercise on a bicycle ergometer. Studies at rest were subsequently obtained. Exercise thallium scans in the control group were normal in 15 and showed a defect in 1; ejection fraction increased in all 16. During exercise, regional wall motion increased uniformly. In the group with coronary artery disease, thallium scanning revealed a new defect in the distribution of the involved arteries in 24 patients. In 15 who had a defect at rest, no new defect developed, but in 9 of the 15 new segmental wall motion defects were evident on radionuclide angiography. With exercise, ejection fraction decreased slightly. Regional wall motion abnormalities developed in the areas corresponding to thallium defects in all. Thallium scanning had a 93% and radionuclide angiography a 98% sensitivity value in detecting coronary artery disease; the respective specificity values were 94 and 100%. In patients with prior myocardial infarction who manifested new exercise abnormalities, 50% showed new thallium defects and 81% new wall motion defects. (Author)

A80-25823 Echocardiography in assessing acute pulmonary hypertension due to pulmonary embolism. W. Kasper, T. Meinertz, F. Kersting, H. Löllgen, P. Limbourgh, and H. Just (II Medizinische Klinik und Poliklinik, Mainz, West Germany). *American Journal of Cardiology*, vol. 45, Mar. 1980, p. 567-572. 22 refs.

An echocardiographic and catheterization study of 18 patients with acute pulmonary embolism is performed in order to investigate the use of echocardiography in detecting acute pulmonary hypertension. Mean pulmonary arterial pressure was found to correlate with the angiographic severity index of embolic obstruction, and with the size of the right pulmonary artery as determined by suprasternal echocardiography corrected for body surface area. Precordial echocardiography revealed that the right ventricular dimension was increased in 13 out of 16 patients and the left ventricular dimension decreased in 10 of 15, correlating well with the angiographic severity index. It is concluded that suprasternal and precordial echocardiography is a valuable noninvasive technique in the assessment of acute pulmonary hypertension in patients with acute pulmonary embolism and no history of cardiopulmonary disorder. A.L.W.

A80-25824 Nuclear cardiology. I - Radionuclide angiographic assessment of left ventricular contraction: Uses, limitations and future directions. II - The role of myocardial perfusion imaging using thallium-201 in diagnosis of coronary heart disease. M. M. Bodenheimer, V. S. Banka, and R. H. Helfant (Presbyterian-University of Pennsylvania Medical Center; Pennsylvania, University, Philadelphia, Pa.). *American Journal of Cardiology*, vol. 45, Mar. 1980, p. 661-684. 148 refs. Research supported by the Mabel Pew Myrin Trust.

The current status of radionuclide angiography is reviewed. First pass and gated equilibrium methods for determining left ventricular contraction are compared. Some clinical applications of radionuclide angiography are then examined, including the detection of discrete versus diffuse asynergy and the assessment of myocardial infarction. The second part of this work reviews the uses and limitations of thallium-201 perfusion imaging in the diagnosis of the acute and chronic manifestations of coronary heart disease. Theoretical and technical considerations of thallium-201 imaging are reviewed along with the clinical implications of the technique. B.J.

A80-25826 # Concerning some mechanisms of visual recognition (K voprosu o nekotorykh mekhanizmakh zritel'nogo opoznaniia). T. P. Zinchenko (Leningradskii Gosudarstvennyi Universitet, Leningrad, USSR). *Fiziologiia Cheloveka*, vol. 6, Jan.-Feb. 1980, p. 3-7. 7 refs. In Russian.

The paper examines the structure of the recognition process in the recognition of visual stimuli according to their shape, spatial orientation, and size. A tachistoscope was used to test 17 subjects who suffer from various impairments of peripheral vision. The data were compared with a preliminary investigation of the characteristics of afterimages perceived by the same subjects. Some general conclusions on the structure of visual recognition for the parameters studied are reported. B.J.

A80-25827 # Neurophysiological mechanisms of filtering in the visual system (O neirofiziologicheskikh mekhanizmakh fil'tratsii v zritel'noi sisteme). Ia. A. Meerson (Akademiia Nauk SSSR, Institut Evoliutsionnoi Fiziologii i Biokhimii; Psikhonevrologicheskii Institut, Leningrad, USSR). *Fiziologiia Cheloveka*, vol. 6, Jan.-Feb. 1980, p. 8-17. 21 refs. In Russian.

In an effort to study mechanisms of visual filtering, the present study examined the noise immunity of visual perception in the presence of different types of noise both for healthy subjects and those with local brain damage. The visual masking effect was found to depend on temporal relations between the effects of the signal stimulus and the masking stimulus. Two features of the filtering mechanism are delineated, and the effects of brain damage on visual masking are considered. B.J.

A80-25828 # **Spatial summation of monochromatic light in the visual system (Prostranstvennaia summatsiia monokhromaticheskogo sveta v zritel'noi sisteme).** D. S. Saudargene and A. V. Bertulis (Kaunasskii Meditsinskii Institut, Kaunas, Lithuanian SSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 18-23. 17 refs. In Russian.

The paper presents results on the summational properties of the fovea under different monochromatic stimuli. Color mechanisms of the human fovea exhibit various ranges of distribution of the lateral connections which determine the spatial parameters of integration of the light signal. Every color mechanism is associated with lateral inhibition, which increases with increasing brightness. The narrowing of the zones of complete and incomplete summation is discussed. B.J.

A80-25829 # **Thresholds of recognition of various features of color stimuli (Porogi opoznaniia raznykh priznakov tsvetovykh stimulov).** A. V. Bertulis and A. I. Gutauskas (Kaunasskii Meditsinskii Institut, Kaunas, Lithuanian SSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 24-29. 14 refs. In Russian.

Absolute thresholds of perception of objects of different shape, size, and color were determined in psychophysical experiments. The absolute thresholds of monochromatic stimuli were found to have three levels of threshold brightness: the threshold of stimulus detection (achromatic), the color recognition threshold (chromatic), and the shape-recognition threshold. The range of brightness from the achromatic threshold to the shape-recognition threshold is different for different colors. The subjective evaluation of brightness for different colors is discussed. B.J.

A80-25830 # **The dependence of thresholds of detection of moving single bands of light on their spectrum and speed (Zavisimost' porogov obnaruzheniia dvizhushchikhsia odinochnykh svetovykh polosok ot ikh spektra i skorosti dvizheniia).** K. N. Dudkin and V. E. Gauzel'man (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 30-34. 9 refs. In Russian.

A multichannel spatial-frequency model is used to examine experimental data on the visual detection of moving single bands of light. It is shown that the contrast sensitivity of detection of moving bands depends on their speed; this sensitivity decreases as the speed increases and the width of the bands decreases. The defocusing of bands with a rectangular illumination profile leads to a Gaussian profile of illumination and causes a significant decrease of contrast sensitivity only for narrow bands moving at low speed. It is suggested that the perception of such bands of light is realized by a multichannel system of filters which delineate the frequency components of the spectrum and operate in a definite range of speeds. B.J.

A80-25831 # **Audiokinesthetic relationships and the time of simple motor response to auditory and kinesthetic stimuli (Audiokinesteticheskie vzaimootnosheniia i vremia prostoi dvigatel'noi reaktsii na slukhovoi i kinesteticheskii stimuly).** A. V. Zav'ialov and G. N. Zaitseva (Meditsinskii Institut, Kursk, USSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 43-51. 30 refs. In Russian.

Healthy subjects were tested for (1) the correlation of sensitivity indices of kinesthetic and auditory analyzers and (2) the time of simple motor response to auditory and kinesthetic stimuli. Two groups of subjects were identified: (1) subjects whose kinesthetic sensitivity exceeded their auditory sensitivity and (2) subjects whose auditory sensitivity exceeded their kinesthetic sensitivity. A distinct direct correlation among the mean values of motor and sensorimotor indices was found for both groups. B.J.

A80-25832 # **Investigation of the self-regulation of sensorimotor activity (Issledovaniia protsessov samoreguliatsii sensomotornoi deiatel'nosti).** D. N. Menitskii and A. M. Zingerman (Akademiia Meditsinskikh Nauk SSSR, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 52-62. 36 refs. In Russian.

The work of Sechenev (1974) on sensorimotor activity is reviewed with particular reference to three mechanisms of motor control: wakefulness, sensory control, and motor control with respect to speed, strength, and duration. Experiments have been performed to verify some of Sechenev's hypotheses. In particular it is shown that in the course of evolution the diversity (or information content) of the environment becomes an ecological factor that plays an important role in maintaining the necessary functional level of the central nervous system. Furthermore, the dependence of motor response parameters on the activation level and the diversity of the environment has been demonstrated. B.J.

A80-25833 # **Peripheral fatigue under local static work of varying intensity (Perifericheskoe utomlenie pri lokal'noi staticheskoi rabote raznoi intensivnosti).** Ia. M. Kots and S. P. Kuznetsov (Gosudarstvennyi Tsentral'nyi Institut Fizicheskoi Kul'tury, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 71-79. 25 refs. In Russian.

A80-25834 # **Functional stability of the trained organism under prolonged uniform loads in standard conditions (Funktsional'naia ustoichivost' trenirovannogo organizma pri vypol'nenii dlitel'nykh ravnomernykh nagruzok v standartnykh usloviiakh).** T. A. Matsin and A. A. Viru (Tartusskii Gosudarstvennyi Universitet, Tartu, Estonian SSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 85-92. 52 refs. In Russian.

A80-25835 # **Comparative analysis of lung models used to study the mechanics of breathing (Sravnitel'nyi analiz modelei legkogo, ispol'zuemykh dlia issledovaniia mekhaniki dykhaniia).** G. A. Liubimov (Moskovskii Gosudarstvennyi Universitet, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 105-114. 8 refs. In Russian.

Results obtained with one- and two-component lung models are compared. It is shown that the one-component model with one resistance satisfactorily describes experimental data on the respiration of healthy subjects. Neither the one-component model nor the two-component model can explain certain experimental characteristics of the respiration of sick subjects. It is concluded that some of the qualitative features found in respiratory experiments can be satifactorily described by a two-component model if variations of component volumes are prescribed. B.J.

A80-25836 # **Investigation of the functional state of the CNS under conditions of altitude decompression (Issledovanie funktsional'nogo sostoianiia TsNS v usloviiakh vysotnoi dekompresii).** G. P. Goroian and I. N. Zakharova (Ministerstvo Zdravookhraneniia SSSR, Institut Mediko-Biologicheskikh Problem, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 115-120. 13 refs. In Russian.

Subjects under decompression were tested for spontaneous EEG, latent visual-motor response, stability of attention, and thresholds of tactile and pain sensitivity. A period of subjective well-being before the actual decompression disorder was identified which was characterized by a lessening of attention and a lowering of the thresholds of tactile and pain sensitivity. A definite correlation was found between the resistance of individual subjects to altitude decompression and spontaneous EEG patterns. B.J.

A80-25837 # **Some aspects of the organization of nocturnal sleep in normal and pathological states (Nekotorye aspekty organizatsii nochnogo sna v norme i patologii).** A. M. Vein, N. N. Iakhno,

V. L. Golubev, V. V. Alekseev, V. L. Andreev, R. G. Biniaurishvili, N. A. Vlasov, V. V. Kulikovskii, and S. V. Shvarkov (I. Moskovskii Meditsinskii Institut, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 133-140. 26 refs. In Russian.

The present study examines the structure of sleep of healthy subjects and of those suffering from functional and organic disorders of the central nervous system (e.g., neuroses, epilepsy, Parkinson's disease, etc.). Various methods are used to obtain data on the functional organization of the sleep and wakefulness of healthy persons as well as on the role of nonspecific brain systems in the development of certain neurological syndromes. Some general tendencies governing the sleep of healthy and sick persons were discovered. B.J.

A80-25838 # **Individual peculiarities of the space-time organization of the bioelectric activity of the brain in a probalilistic prediction situation (Individual'nye osobennosti prostranstvenno-vremennoi organizatsii bioelektricheskoi aktivnosti mozga v situatsii veroiatnostnogo prognozirovaniia).** S. L. Makarenko (Akademiia Pegagogicheskikh Nauk SSSR, Moscow, USSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 164-167. 14 refs. In Russian.

A80-25839 # **Contact ring for registering the turning of the eyeball (Kontaktnoe kol'tso dlia registratsii povorotov glaznogo iabloka).** A. G. Luuk, Iu. K. Allik, L. K. Shotter, and V. I. Kushpil' (Tartusskii Gosudarstvennyi Universitet, Tartu, Estonian SSR). *Fiziologiia Cheloveka,* vol. 6, Jan.-Feb. 1980, p. 175-177. 11 refs. In Russian.

A80-25890 * **Evaluation of the relationship between motion sickness symptomatology and blood pressure, heart rate, and body temperature.** A. Graybiel and J. R. Lackner (U.S. Naval Aerospace Medical Center, Aerospace Medical Research Laboratory, Pensacola, Fla.; Brandeis University, Waltham, Mass.). *Aviation, Space, and Environmental Medicine,* vol. 51, Mar. 1980, p. 211-214. 9 refs. Contract No. NAS9-15147. NASA Order T-9140-E.

This study investigated the relationship between the development of symptoms of motion sickness and changes in blood pressure, heart rate, and body temperature. Twelve subjects were each evaluated four times using the vestibular-visual interaction test (Graybiel and Lackner, 1980). The results were analyzed both within and across individual subjects. Neither a systematic group nor consistent individual relationship was found between the physiological parameters and the appearance of symptoms of motion sickness. These findings suggest that biofeedback control of the physiological variables studied is not likely to prevent the expression of motion sickness symptomatology. (Author)

A80-25891 * **Motion sickness in the squirrel monkey.** J. M. Ordy and K. R. Brizzee (Tulane University, Covington, La.). *Aviation, Space, and Environmental Medicine,* vol. 51, Mar. 1980, p. 215-223. 42 refs. Grants No. NIH-R-00164; No. NsG-2139.

In this study of susceptibility to motion sickness the specific aims were to examine the effects of combined vertical rotation and horizontal acceleration, phenotype, sex, visual cues, morning and afternoon testing, and repeated test exposures on incidence, frequency, and latency of emetic responses. The highest emetic incidence of 89% with an emetic frequency of 2.0 during 60 min and a latency of 19 min from onset of testing occurred at 25 rpm and 0.5 Hz linear acceleration. Since the emetic responses were quite similar to man in eliciting motion stimuli it was concluded that the squirrel monkey represents a very suitable primate model for studies of motion and space sickness. B.J.

A80-25892 * **Visual and postural motion aftereffects following parabolic flight.** J. R. Lackner and A. Graybiel (U.S. Naval Aerospace Medical Center, Aerospace Medical Research Laboratory, Pensacola, Fla.; Brandeis University, Waltham, Mass.). *Aviation, Space, and Environmental Medicine,* vol. 51, Mar. 1980, p. 230-233. 7 refs. Contract No. NAS9-15147. NASA Order T-9140-E.

Postural and visual motion aftereffects may be experienced after exposure to alternating periods of free fall and increased gravitoinertial force in parabolic flight. In an aftereffect, the body feels as if it is again undergoing periodic changes in force level because of motion of the substrate; strong apparent postural motion is also accompanied by visual motion of the surroundings. The aftereffects are discussed according to: (1) their character, (2) their time course, (3) secondary symptoms associated with them, (4) conditions favoring their occurrence, (5) their relation to the inducing frequency, (6) fragments of the complete pattern, (7) their duration, and (8) the importance of contact cues. (Author)

A80-25893 **Body fluid compartments in humans during acute high-altitude exposure.** S. C. Jain, J. Bardhan, Y. V. Swamy, B. Krishna, and H. S. Nayar (Defence Institute of Physiology and Allied Sciences, Delhi, India). *Aviation, Space, and Environmental Medicine,* vol. 51, Mar. 1980, p. 234-236. 18 refs.

Body fluid compartments were studied in a group of sea level residents at sea level and during 12 d of acute exposure to an altitude of 3,500 m. Measurements of total body water and extracellular water were done on the third and 12th days of exposure, while plasma volume was measured on 12th day only. The intracellular water, blood volume, and red cell mass were computed from the above parameters. Total body water and extracellular water decreased progressively, the decrease being 4.7% (p less than 0.001) and 6.0% (p less than 0.05) respectively on the 12th day. Plasma volume and blood volume decreased significantly with a slight increase in red cell mass. Intracellular water, computed from total body water and extracellular water, decreased by 4.3% on 12th day. This study suggested hypohydration on acute altitude exposures. (Author)

A80-25894 * **Effect of simulated weightlessness on the immune system in rats.** L. D. Caren, A. D. Mandel, and J. A. Nunes (NASA, Ames Research Center, Moffett Field; Santa Clara, University, Santa Clara, Calif.). *Aviation, Space, and Environmental Medicine,* vol. 51, Mar. 1980, p. 251-255. 14 refs. Grant No. NCA2-OR685-813.

Rats suspended in a model system designed to simulate many aspects of weightlessness were immunized with sheep red blood cells. Parameters measured on these and control rats included titers of anti-sheep red blood cell antibodies, serum immunoglobulin levels, spleen and thymus weights, hematocrits, and leukocyte differential counts on peripheral blood. No significant differences were found between test and weight-bearing, harnessed controls; however, the thymuses of animals in both these groups were significantly smaller than untreated cage controls. The lack of an effect of simulated weightlessness on the immune system is an interesting result, and its significance is discussed. (Author)

A80-25895 **Studies of limb-dislodging forces acting on an ejection seat occupant.** D. J. Schneck (Virginia Polytechnic Institute and State University, Blacksburg, Va.). *Aviation, Space, and Environmental Medicine,* vol. 51, Mar. 1980, p. 256-264. 12 refs. Grant No. AF-AFOSR-78-3706.

A mathematical theory is being developed in order to calculate the aerodynamic loading to which a pilot is exposed during high-speed ejections. Neglecting the initial effects of flow separation, results thus far indicate that a pilot's musculoskeletal system is not likely to withstand the tendency for limb-flailing if he is ejecting at Mach numbers in excess of about 0.7. This tendency depends very strongly upon the angle at which the pilot's limbs intercept a high-speed flow; the forces that cause limb dislodgement increase dramatically with speed of ejection. Examining the time-course of limb-dislodging forces after the initial onset of windblast, the theory further predicts the generation of a double vortex street pattern on the downstream side of the limbs of an ejection seat occupant. This results in the corresponding appearance of oscillating forces tending to cause lateral motion (vibration) of the limbs. The amplitude and frequency of these oscillating forces are also very dependent on the Mach number of ejection and the angle at which the pilot's limbs intercept the flow. However, even at moderate Mach numbers, the frequency can be as high as 100 cycles per second, and the amplitude rapidly exceeds a pilot's musculoskeletal resistive powers for Mach numbers above 0.7. (Author)

A80-25896 **Intravascular hemolysis in acute mountain sickness.** R. E. Lovlin, S. Rowlands, G. R. Kinnear, and E. Rast (Calgary, University, Calgary, Alberta, Canada). *Aviation, Space, and Environmental Medicine*, vol. 51, Mar. 1980, p. 271, 272. 7 refs.

A case of acute mountain sickness involving intravascular hemolysis is reported. The subject, a 20-year-old man in excellent health with no prior history of mountain sickness, developed a severe headache, nausea, anorexia, tachycardia, Cheyne-Stokes breathing, and cyanosis while on a mountain-climbing expedition to an altitude of 4200 m. When returned to altitude of 2760 m, the symptoms disappeared over the course of eight hours. Hematocrits taken before and after the event indicated hemoglobinemia in the subject, as was found in another subject after 48 hours in a hypobaric chamber at a simulated altitude of 4200 m. It is suggested that further studies of the presence or absence of intravascular hemolysis during acute mountain sickness be conducted to determine their possible relation. A.L.W.

A80-25897 **Mitral valve prolapse - A review.** P. J. Engel and J. R. Hickman, Jr. (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation, Space, and Environmental Medicine*, vol. 51, Mar. 1980, p. 273-286. 192 refs.

A review of the mitral valve prolapse (MVP) is presented. The systolic click-murmur syndrome has been found to be central to a disorder characterized by abnormal systolic herniation of the mitral leaflets into the left atrium; the usual case is an idiopathic, hereditary disorder of the valve leaflets which is very common and benign, but with a clinical character at times similar to that of coronary artery disease. The left ventricular cineangiography is the definitive procedure for the diagnosis of MVP, although noninvasive techniques generally suffice for its diagnosis. A.T.

A80-25898 **The prolapsed mitral valve syndrome and the flyer.** R. B. Rayman (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *(International Academy of Aviation and Space Medicine, International Congress of Aviation and Space Medicine, Manila, Philippines, Oct. 8-12, 1979.) Aviation, Space, and Environmental Medicine*, vol. 51, Mar. 1980, p. 287-289. 13 refs.

The paper considers the prolapsed mitral valve (PMV) syndrome and its effect on the flyer. Although the syndrome is still ill-defined, its characteristics and possible sequelae such as arrhythmias, endocarditis, and sudden death are of concern to flight surgeons; the prolapsed mitral valve syndrome is reviewed and the aeromedical problem it presents is defined. In addition, it is shown that if the patient has chest pains, syncope, mitral regurgitation, and congestive heart failure associated with PMV, he should be removed from flying duty; if PMV is strongly suspected, but the interpretation of the noninvasive procedures such as echocardiogram is equivocal, angiography should be used to confirm or dismiss the suspicion. A.T.

A80-25899 **Investigation of flow rates of oxygen systems used in general aviation.** J. W. Brantigan. *Aviation, Space, and Environmental Medicine*, vol. 51, Mar. 1980, p. 293, 294.

A80-25987 * **Effects of centrifugation stress on pituitary-gonadal function in male rats.** G. D. Gray, E. R. Smith, D. A. Damassa, and J. M. Davidson (Stanford University, Stanford, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, Jan. 1980, p. 1-5. 9 refs. Contract No. NAS9-14716.

The effects of centrifugation for various lengths of time on circulating levels of luteinizing hormone (LH) and testosterone in male rats were investigated. In a chronic 52-day experiment, centrifugation at 4.1 G significantly reduced LH and testosterone levels for the entire period. Centrifugation at 2.3 G had less effect inasmuch as LH levels were not significantly decreased and testosterone levels were significantly reduced only during the first few days of centrifugation. In more acute experiments, centrifugation at 4.1 G for 4 h resulted in reduced testosterone levels, whereas centrifugation for 15 min did not significantly alter the hormone levels. These results indicate that centrifugation can decrease circulating LH and testosterone levels if the gravitational force is of sufficient magnitude and is maintained for a period of hours. Chronic centrifugation may also inhibit the acute excitatory response of LH to handling and ether stress. (Author)

A80-25988 **Vital capacity, exercise performance, and blood gases at altitude as related to age.** D. B. Dill, S. D. Hillyard, and J. Miller (Nevada, University, Boulder City, Nev.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, Jan. 1980, p. 6-9. 11 refs.

Vital capacity (VC) rarely may decrease 35-60% in healthy mountain climbers associated with high-altitude pulmonary edema (HAPE). In the age range 58-71 yr, five of six men during a week or more on White Mt. in 1962 had decreases in VC from 20 to 32% without frank symptoms of HAPE. Dill, one of the five, had decreases in VC again on White Mt. in 1977 and 1978. Yet none of 11 young climbers on White Mt. studied by Hultgren (personal communication) had a significant decrease in VC. Dill's arterial O2 saturation at age 87 at 485 torr was about 79% in rest and 74% when VO2 was 0.74 ml/min.kg. His aerobic capacity at agte 87 yr was 18 ml/min.kg at 695 torr and 15 at 385 torr. (Author)

A80-25989 * **Exercise thermoregulation after 14 days of bed rest.** J. E. Greenleaf and R. D. Reese (NASA, Ames Research Center, Laboratory of Human Environmental Physiology, Moffett Field, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, Jan. 1980, p. 72-78. 32 refs.

The effects of bed rest and exercise training during bed rest on body temperature and thermoregulatory responses at rest and during exercise are investigated. Seven male subjects underwent three two-week periods of bed rest during which isometric, isotonic, or no exercises were performed, separated by two ambulatory control periods and preceded by a two-week control period, during which they exercised regularly. Rectal and mean skin temperatures and sweating responses were determined during 70-min submaximal supine exercise during the bed rest and recovery periods. Measurements reveal a reduction in basal oral temperature during the control-recovery periods, with a relatively constant level during bed rest periods, and a significant increase in the rectal temperature elevation brought on by exercise following all three bed-rest regimes. It is concluded that the excessive increase in rectal temperature could be influenced by changes in skin heat conductance or the inhibition of sweating. A.L.W.

A80-25990 * **Fluid shifts and endocrine responses during chair rest and water immersion in man.** J. E. Greenleaf, E. Shvartz, S. Kravik, and L. C. Keil (NASA, Ames Research Center, Laboratory of Human Environmental Physiology, Moffett Field, Calif.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, Jan. 1980, p. 79-88. 45 refs.

The effects of external water pressure on intercompartmental fluid volume shifts and endocrine responses in man are investigated. Extracellular fluid volumes and plasma and urine electrolyte and endocrine responses of four male subjects were measured during eight hours of head-out water immersion and 16 hours of recovery bed rest and compared to responses obtained during eight hours of chair rest and 16 hours of bed rest without external hydrostatic pressure obtained in the same subjects five months later. Immersion is found to result in a substantial diuresis with respect to chair rest, accounted for by decreases in extracellular volume. A negative water balance during immersion and a positive water balance during chair rest were observed to be accompanied by a shift of extracellular volume to the intracellular compartment, as well as the suppression of plasma arginine vasopressin and renin activities in both regimes. The vasopressin and renin activity decreases are attributed to the increased central blood volume, and half of the plasma loss in immersed subjects is attributed to the effects of external water pressure. A.L.W.

A80-25991 * **Echocardiographic left ventricular masses in distance runners and weight lifters.** J. C. Longhurst, W. J. Gonyea, J. H. Mitchell (Texas, University, Dallas, Tex.), and A. R. Kelly. *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 48, Jan. 1980, p. 154-162. 31 refs. Research supported by the Lawson and Rogers Lacy Research Fund in Cardiovascular Disease; Grants No. NIH-HL-06296; No. NsG-9026.

The relationships of different forms of exercise training to left ventricular mass and body mass are investigated by echocardiographic studies of weight lifters, long-distance runners, and comparatively sized untrained control subjects. Left ventricular mass determinations by the Penn convention reveal increased absolute left ventricular masses in long-distance runners and competitive weight lifters with respect to controls matched for age, body weight, and body surface area, and a significant correlation between ventricular mass and lean body mass. When normalized to lean body mass, the ventricular masses of distance runners are found to be significantly higher than those of the other groups, suggesting that dynamic training elevates left ventricular mass compared to static training and no training, while static training increases ventricular mass only to the extent that lean body mass is increased. A.L.W.

A80-26015 **Spectrophotometric identification of the pigment associated with light-driven primary sodium translocation in Halobacterium halobium.** J. K. Lanyi (NASA, Ames Research Center, Moffett Field, Calif.) and H. J. Weber (California, University, Berkeley, Calif.). *Journal of Biological Chemistry,* vol. 255, Jan. 10, 1980, p. 243-250. 22 refs. NIH-supported research.

A80-26029 # **The effect of vasoactive agents on the resistance and capacitance vessels of the small intestine at high altitude (Vliianie vazoaktivnykh veshchestv na soprotivlenie i emkost' sosudov tonkogo kishechnika v usloviiakh vysokogor'ia).** S. B. Daniiarov and I. E. Kononets (Kirgizskii Gosudarstvennyi Meditsinskii Institut, Frunze, Kirgiz SSR). *Fiziologicheskii Zhurnal SSSR,* vol. 65, Dec. 1979, p. 1825-1830. 20 refs. In Russian.

Cats were tested with adrenaline (10 micrograms), serotonin (30 micrograms), and acetylcholine (10 micrograms) on the 3rd, 15th, and 30th days of their stay at an altitude of 3200 m. The drugs were found to induce different vasomotor responses in the precapillary and postcapillary portions of the vascular net of the small intestine. The possible mechanisms of detected changes are discussed; one mechanism has to do with the initial tonus of the resistance vessels of the small intestine, associated with the adaptation of the organism to high altitude conditions. B.J.

A80-26030 # **Responses of the primary vestibular afferents of the frog to direct vibratory stimulation of the semicircular canal (Otvety pervichnykh vestibuliarnykh afferentov liagushki na priamuiu vibrostimuliatsiiu polukruzhnogo kanala).** I. V. Orlov (Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologicheskii Zhurnal SSSR,* vol. 66, Jan. 1980, p. 48-55. 12 refs. In Russian.

A80-26214 **Early assignments of the genetic code dependent upon protein structure.** D. I. Marlborough (Australian National University, Canberra, Australia). *Origins of Life,* vol. 10, Mar. 1980, p. 3-14. 23 refs.

Orgel (1972) has suggested that polynucleotides with sequences of alternating purine/pyrimidine are likely to have predominated in prebiotic conditions. Therefore, in any early template-directed protein synthesis, the number of available codons would have been limited. However, for any self-organizing system to survive and propagate, some feedback must occur from the products of the synthesis to the control of the synthetic procedure itself; i.e., the protein synthesized should have catalyzed some step in the initiation of template-directed synthesis. A given protein structure with a characteristic conformation and function would be optimal for the product of such a synthesis, and this in turn would limit the number of nucleotide sequences of those available able to give rise to a functioning synthetic assembly. A possible candidate for such an early polypeptide is the ferredoxin group of proteins and it is shown that with the present-day code the corresponding nucleotides do have a high percentage of alternating purine/pyrimidine sequences. Hence these combined restraints on the primitive synthetic machinery would direct the possible assignments of the genetic code helping to explain its regularity and universality. (Author)

A80-26215 • **A conformational rationale for the origin of the mechanism of nucleicacid-directed protein synthesis of 'living' organisms.** R. Balasubramanian, P. Seetharamulu, and G. Raghunathan (Madras, University, Madras, India). *Origins of Life,* vol. 10, Mar. 1980, p. 15-30. 95 refs.

A80-26216 **The evolution of the protein synthesis system. II - From chemical evolution to biological evolution.** H. Mizutani and C. Ponnamperuma (Maryland, University, College Park, Md.). *Origins of Life,* vol. 10, Mar. 1980, p. 31-38. 21 refs.

The sequence of events previously proposed for modern protein synthesis is reviewed. It begins with an abiological synthesis of a template, and evolves through two model autocatalytic systems to a primitive cell that has a rudimentary biological protein synthesis system. A possible scheme for the origin of tRNA's is described so as to fill the gap between the model and the modern system. Fragments of genes that existed in and around the primitive system are proposed to be precursors of tRNA's. Since these fragments must have been undesirable components for the system, the origin and evolution of tRNA's may be regarded as an excellent answer by the primitive system to adverse circumstances. (Author)

A80-26217 **Operational description of microsystems formation in prebiological molecular evolution.** K. Matsuno (Tokyo University, Kawagoe, Japan). *Origins of Life,* vol. 10, Mar. 1980, p. 39-45. 12 refs.

The dynamic process responsible for the transformation of amino acid or polyamino acid solutions into proposed prebiotic microsystems such as the microspheres of Fox (1978) and the marigranules of Yanagawa and Egami (1978) is investigated. The unidirectional nature of the reactions occurring in a nonequilibrium system such as a homogeneous solution of various elements in which polymerization is not balanced by hydrolysis is discussed, and its implications are applied to a model solution of polyamino acids in which peptide bond formation is not equalled by hydrolysis. It is shown that such a solution is unstable with respect to the formation of microscopic compartments of locally condensed peptide bond linkages which accumulate as long as the solution remains in nonequilibrium. A.L.W.

A80-26218 **Oligo-glycine synthesis in an aqueous solution of glycine under oxidative conditions.** Y. Yamagata, A. Yamashita, and K. Inomata (Kanazawa University, Kanazawa, Japan). *Origins of Life,* vol. 10, Mar. 1980, p. 47-50. 5 refs.

Di- and triglycine synthesis in aqueous solution of glycine under oxidative conditions is described as part of a study of the prebiotic polymerization of biomonomers. 1M aqueous solution of glycine was bubbled for 90 hours with oxygen discharged in the path from an oxygen cylinder, and 2M solution of glycine in concentrated hydrogen peroxide (75%) was incubated at 37 C. The yields of peptides were traced for 200 days, and the final yields were 0.25% and 0.01% for di- and triglycine, respectively. In another trial the solution at 166 days of incubation was chromatographed on a G 10 Sephadex column, and the intensity of ninhydrin color was found to increase after hydrolysis by 4-5 times, indicating the presence of oligo-glycine. The solutions of 1M glycine and 0.5M diglycine prepared with 30% hydrogen peroxide were incubated for 38 days at 37 C. The yields of 0.12% and 0.33% were obtained, respectively. It is concluded that discharged oxygen and hydrogen peroxide encourage the condensation of glycine, though the yields are very low. L.M.

A80-26219 **Role of interstellar molecules in prebiological evolution.** L. M. Mukhin and M. V. Gerasimov (Akademiia Nauk SSSR, Institut Kosmicheskikh Issledovanii, Moscow, USSR). *Origins of Life,* vol. 10, Mar. 1980, p. 61-63. 11 refs.

Three generations of organic molecules in space are considered: interstellar molecules, molecules synthesized in protosolar cloud and molecules synthesized on the earth. It is shown that there are no possibilities for amino acid polymers to be synthesized under interstellar cloud conditions. Molecules of the second generation were disintegrated during the earth accumulation period. The problem of the origin of life is connected with the evolution of molecules of the third generation. A80-26220 * **Chemical evolution and the origin of life - Bibliography supplement 1977.** L. G. Pleasant (George Washington University, Medical Center, Washington, D.C.) and C. Ponnamperuma (Maryland, University, College Park, Md.). *Origins of Life,* vol. 10, Mar. 1980, p. 69-87. 360 refs. Contract No. NASw-3165; Grant No. NGR-21-002-317.

A80-26335 # **On the structural and kinematic synthesis of open-loop manipulators. I - Basic structural and kinematic procedures.** P. N. Nitescu (Institute for Computer Technique, Bucharest, Rumania). *(International Symposium on Theory and Practice of Robots and Manipulators, 3rd, Udine, Italy, Sept. 12-15, 1978.) Revue Roumaine des Sciences Techniques, Série de Mécanique Appliquée,* vol. 25, Jan.-Feb. 1980, p. 49-66. 10 refs.

This paper offers an approach to perform the structural synthesis of industrial manipulators having an open-loop kinematic chain with lower-pair joints. In the context of achieving the computer-aided control of various manipulator structures, the expressions defining anthropomorphic angular and linear displacements between the adjacent links are deduced as solutions of the closure equation of the corresponding closed-loop mechanisms in the successive positions of the free end along the required spatial track. The successive computation followed by a suitable mechanical variation of the joint parameters according to the procedure mentioned offers a guidance technique of the manipulator without requiring feedback in the control system. A80-26390 * **Some final conclusions and supporting experiments related to the search for organic compounds on the surface of Mars.** K. Biemann and J. M. Lavoie, Jr. (MIT, Cambridge, Mass.). *Journal of Geophysical Research,* vol. 84, Dec. 30, 1979, p. 8385-8390. 22 refs. Contract No. NAS1-9684; Grant No. NGR-22-009-005.

The Viking molecular analysis experiment has demonstrated the absence (within the detection limits which range from levels of parts per million to below parts per billion) of organic substances in the Martian surface soil at the two Viking landing sites. Laboratory experiments with sterile and nonsterile antarctic samples further demonstrate the capability and reliability of the instrument. The circumstances under which organic components could have escaped detection, such as inaccessibility or extreme thermal stability of organic polymers, are discussed but are found to be unlikely. The inability of the instrument to detect free oxygen evolved from soil samples is pointed out. (Author)

A80-26391 * **Viking gas exchange reaction - Simulation on UV-irradiated manganese dioxide substrate.** T. R. Blackburn (St. Andrews Presbyterian College Laurinburg, N.C.), H. D. Holland (Harvard University, Cambridge, Mass.), and G. P. Ceasar (Xerox Corp., Webster, N.Y.). *Journal of Geophysical Research,* vol. 84, Dec. 30, 1979, p. 8391-8394. 17 refs. Contract No. NAS1-10492.

The exchange of O2 for H2O, analogous to that recorded on Mars by the Viking GEX experiment, has been observed on humidifying powdered beta-MnO2 (pyrolusite) which had been irradiated by UV in a humidified analog of the Martian atmosphere. Pyrolusite irradiated in a dry atmosphere did not release O2 on humidification. The XPS spectra of Mn and O of the reactive pyrolusite were shifted toward higher binding energies during UV irradiation. These shifts are consistent with the creation of a surface layer of a Mn(V) or Mn(VI) compound. The destruction of such a layer on humidification could account for the observed O2 release. Although manganese has not been identified in the Martian regolith, the upper limit of the Mn concentration is sufficiently high that O2 release from pyrolusite could have been responsible for the results of the Viking GEX experiment. A80-27029 **Aviation medicine. Volume 2 - Health and clinical aspects.** Edited by G. Dhenin (RAF, Medical Services, London, England). London, Tri-Med Books, Ltd., 1978. 351 p. $26.35.

The present textbook deals with health and clinical aspects in aviation medicine. It is divided in four parts: Part 1 covers commercial aviation and health, Part 2 health and hygiene, Part 3 clinical aspects, and Part 4 accident investigation and air safety. Attention is given to medical standards for commercial aircrew, some epidemiological and immunological problems in international travel, medical aspects of aircraft accidents, and some aspects of air transport of animals. The clinical aspects are discussed in detail, including carriage of invalid passengers in civil airlines, some medical conditions of importance in aviation medicine, respiratory disease and aviators, psychiatry and neurology in aviation medicine, as well as otorhinolaryngology, ophthalmology and orthopedics in aviation medicine. S.D.

A80-27065 # **A method of determination of scale numbering taking into account the carrying capacity of an operator (Metod opredeleniia otsifrovki shkal priborov s uchetom propusknoi sposobnosti operatora).** Iu. E. Khoroshavtsev and V. V. Perepechaev (Akademiia Grazhdanskoi Aviatsii, Leningrad, USSR). *Priborostroenie*, vol. 23, Jan. 1980, p. 9-12. In Russian.

The paper presents a method for calculating the scale value of meters. Statistic characteristics of flight parameters are taken into account along with the information carrying capacity of a human operator. A mathematical model for n meters is derived. V.T.

A80-27074 **Interaction of pre- and postsaccadic patterns having the same coordinates in space.** W. Wolf, G. Hauske, and U. Lupp (München, Technische Universität, Munich, West Germany). *Vision Research*, vol. 20, no. 2, 1980, p. 117-125. 14 refs. Deutsche Forschungsgemeinschaft Contract No. SFB-50.

Experiments were carried out to study the visibility of postsaccadic stimuli under the influence of patterns presented at the saccade goal immediately before the saccade. For gratings of 3.2 c/deg an improved visibility was found in the case when the pre- and postsaccadic stimuli have the same spatial frequency. This enhancement effect is also obtained with aperiodic patterns, and turns out to be pattern specific. Dichoptic experiments show that this effect is a central phenomenon. The experimental data can be interpreted as an integration of information about extra-foveal regions of the visual field at the saccade goal with later information obtained by foveal fixation after the eye movement. The results are discussed under the view point of visual stability. (Author)

A80-27075 **A comparison of accommodative responsiveness and contrast sensitivity for sinusoidal gratings.** D. A. Owens (Pennsylvania State University, University Park, Pa.). *Vision Research*, vol. 20, no. 2, 1980, p. 159-167. 51 refs. Grant No. PHS-MH-08061.

The accuracy of steady-state accommodation for high contrast sinusoidal gratings was compared with the observers' contrast sensitivities for the same gratings. Stimuli ranging in spatial frequency from 0.5 to 19 c/deg were presented at optical distances ranging from 0 to 5 diopters, and accommodative responses were measured with a laser optometer. Contrast thresholds were obtained by the method of constant stimuli. The results showed that optimal performance for both accommodation and contrast sensitivity was obtained for spatial frequencies of 3-5 c/deg, while progressively diminished performance was obtained for higher and lower spatial frequencies. The accuracy of accommodation for sinusoidal gratings of intermediate spatial frequencies was equivalent to that for a square-wave grating of 4 c/deg. These findings imply that sharp edges are not necessary for accurate accommodative responses, and they suggest that mechanisms underlying foveal contrast resolution are also involved in the control of steady-state accommodation. (Author)

A80-27077 * **The role of Na/+/ in transport processes of bacterial membranes.** J. K. Lanyi (NASA, Ames Research Center, Extraterrestrial Research Div., Moffett Field, Calif.). *Biochimica et Biophysica Acta*, vol. 559, 1979, p. 377-397. 140 refs.

Until recently it was generally held that transport in bacteria was linked exclusively to proton circulation, in contrast to most eucaryotic systems, which depended on Na(+) circulation. The present review is intended to trace recent developments which have led to the discarding of this idea. The discussion covers transport of Na(+) and other cations, effects of Na(+) and Na(+) gradients on metabolite transport, properties of Na(+)-dependent transport carriers, and evolutionary considerations of Na(+) transport. It is now apparent that the transport of Na(+) is an important part of energy metabolism in bacteria, and that Na(+) gradients as well as H(+) gradients are used in these systems for the conservation and transmission of energy. Two hypotheses are proposed to explain the evolution of Na/K systems, and it is presently difficult to decide between them. S.D.

Williams (NASA, Ames Research Center, Biosystems Div., Moffett Field, Calif.). In: Thermoregulatory mechanisms and their therapeutic implications. Basel, S. Karger AG, 1980, p. 212, 213. 5 refs.

A80-27260 **Rate of acoustic change may underlie hemispheric specialization for speech perception.** J. Schwartz (Johns Hopkins University, Baltimore, Md.) and P. Tallal (California, University, La Jolla, Calif.). *Science*, vol. 207, Mar. 21, 1980, p. 1380, 1381. 27 refs.

Phonemically similar syllables, differing only by temporal acoustic cues, were presented dichotically to investigate temporal processing mechanisms in hemispheric specialization for speech. Reducing the rate of acoustic change within syllables while keeping their phonemic characteristics constant significantly decreased the characteristic asymmetry in processing speech. (Author)

A80-27830 # **On the audition coordinating cerebral activity.** P. Albert (Szeged, Tudomanyegyetem, Szeged, Hungary). *Acta Technica*, vol. 89, no. 1-2, 1979, p. 201-212. 7 refs.

A model is demonstrated of the non-adaptive cerebral activities connected with audition, which is functional rather than structural, thus relationship between the transformations and the cerebral structure will not be examined. Our analysis of the transformations leads to the explanation of many experiments connected with hearing. The model transforms the information entering the ears into such a form which is suitable for cluster analysis, thus creating a possibility for the description of adaptive brain activity. In this study it will be demonstrated how to apply the model in some simple mathematical cases, and a quantitative discussion will be given of Treisman's experiments. (Author)

A80-28101 **Visual search through color displays - Effects of target-background similarity and background uniformity.** E. W. Farmer and R. M. Taylor (RAF, Institute of Aviation Medicine, Farnborough, Hants., England). *Perception and Psychophysics*, vol. 27, no. 3, Mar. 1980, p. 267-272. 26 refs.

The effects of target-background similarity and background uniformity were investigated in two experiments in which subjects reported the presence or absence of an achromatic target item in arrays containing irrelevant chromatic items. In Experiment 1, both 'present' and 'absent' decision times were an increasing function of the similarity of a predefined target item to the background, and were shortened when the interitem similarity of the background set was increased. In Experiment 2, the effects of target-background similarity on the 'present' decision were replicated when subjects were not informed on each trial as to which member of the target set might appear in the array, and the 'absent' decision was faster when each row of the array comprised background items of a single color than when these items were allocated randomly to array locations. The results are interpreted in terms of the role of preattentive grouping operations. (Author)

A80-28167 **Chronic propranolol treatment blunts right ventricular hypertrophy in rats at high altitude.** N. F. Voelkel, I. F. McMurtry, and J. T. Reeves (Colorado, University, Denver, Colo.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology*, vol. 48, Mar. 1980, p. 473-478. 29 refs. Research supported by the Max Kade Foundation; Grant No. NIH-HL-14985.

A80-28188 * **A model for hypokinesia: Effects on muscle atrophy in the rat.** X. J. Musacchia, D. R. Deavers, G. A. Meininger, and T. P. Davis (Louisville, University, Louisville, Ky.; Missouri, University, Columbia, Mo.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 48, Mar. 1980, p. 479-486. 28 refs. Grants No. NsG-2191; No. NsG-2325.

Hypokinesia in the hindlimbs of rats was induced by suspension; a newly developed harness system was used. The animal was able to use its forelimbs to maneuver, within a 140 deg arc, to obtain food and water and to permit limited grooming of the forequarters. The hindlimbs were nonload bearing for 7 days; following a 7-day period of hypodynamia, selected animals were placed in metabolic cages for 7 days to study recovery from hypokinesia. During the 7-day period of hypokinesia there was evidence of muscle atrophy. Gastrocnemius weight decreased, renal papillary urea content increased, and daily urinary losses of NH3 and 3-methylhistidine increased. During the 7-day recovery period muscle mass and excretion rate of urea, NH3 and 3-methylhistidine returned to control levels. Calcium balance was positive throughout the 7-day period of hypokinesia. Hypertrophy of the adrenals suggested the occurrence of some level of stress despite the apparent behavioral adjustment to the suspension harness. It was concluded that significant muscle atrophy and parallel changes in nitrogen metabolism occur in suspended rats and these changes are readily reversible. (Author)

Gulesian, Jr. (Harvard University, Boston and Cambridge, Mass.). *Journal of Applied Physiology: Respiratory, Environmental and Exercise Physiology,* vol. 48, Mar. 1980, p. 545-556. 28 refs. Grant No. NIH-1-R01-HL-16325-01-A1.

The paper presents methods for identifying respiratory oscillations which disclose altitude effects. Breath shape was defined by inspiratory and expiratory durations and volumes (V sub E), total breath duration (T sub t), and ventilation. Dynamic breath pattern analysis revealed that the chronological sequences of these variables display large sustained oscillation, and that the simultaneous oscillations in ventilation and total breath duration are 'compensating' or 'reinforcing': the 'compensating' oscillations typify the view that breath-to-breath changes in V sub E and T sub t oscillate in phase, but for the reinforcing oscillations breath changes in V sub E and T sub t oscillate out-of-phase. A80-28554 **A dual task investigation of pilots' skill level.** J. V. Crosby and S. R. Parkinson (Arizona State University, Tempe, Ariz.). *Ergonomics,* vol. 22, Dec. 1979, p. 1301-1313. 14 refs. Contract No. F33615-77-C-0053.

Performances of instructor pilots and student pilots were compared in a dual task paradigm combining a ground controlled approach as the primary task and memory search as the subsidiary task. In the first experiment the difference in subsidiary task performance between single and dual conditions was greater for a group of students in the middle phase of T-37B training than for a group of experienced instructor pilots. It was concluded that the effect of experience on the type of flight task examined here is to reduce the processing demands of encoding and/or responding. In the second experiment a group of student pilots who had just completed T-37B training was run in the same task to determine the sensitivity of the dual task to less disparate amounts of flying experience. The difference in memory search performance between single and dual conditions for the late-phase students was quite similar to that of the instructor pilots and was significantly less than that of mid-phase students. That dual task performance discriminated between student groups differing in only four weeks of training suggests that the dual task paradigm has considerable potential value in providing an objective measure of flight proficiency. (Author)

A80-28555 **Some aspects concerning the dynamic evaluation of oxygen consumption in exercise tests.** F. Balanescu (Institute of Medical Assessment and Rehabilitation of Work Capacity, Bucharest, Rumania). *Ergonomics,* vol. 22, Dec. 1979, p. 1337-1342. 13 refs.

Oxygen intake assessment for rating performance efficiency in an exercise test with 42 subjects who ascended and descended a step at 60, 80, 100 and 120 W respectively is discussed. Oxygen consumption is determined under steady-state and nonsteady-state conditions with open circuit equipment by adding consumption for each minute of exercise and recovery periods, and subtracting the value from the total. It is shown that in real steady-state exercise the oxygen deficit is lower than or equal to the oxygen debt, that the oxygen intake per mechanical work unit is significantly lower than in the nonsteady-state exercise, and that the efficiency of the energy expenditure is lower in the nonsteady-state exercise than in the steady-state exercise. L.M.

A80-28556 * **Effect of cursor characteristics on pilots' tracking performance on a cathode-ray tube in dynamic simulation.** M. K. Junge (Stanford University, Stanford, Calif.). *Ergonomics,* vol. 22, Dec. 1979, p. 1363-1370. 24 refs. Grant No. NsG-2269.

The effects of cursor configuration, size, and orientation on the performance of 11 commercial airline pilots were investigated in a difficult compensatory tracking task in a moving-base aircraft simulator. Three levels of congruent cab motion (0, 1, and 2 times the visual motion) were superimposed on the tracking task. Data analysis of the mean tracking error scores revealed no significant effects of cursor size, orientation, or configuration on pilots' tracking performance. Mean tracking error did not significantly differ between the three levels of motion for the conditions with a single dot as the cursor. However, for the dotted and solid line cursors, tracking error significantly decreased from the no motion condition to the motion conditions. The addition of simulator motion significantly reduced tracking error for large cursors, but not for small ones such as a single dot. (Author)

A80-28699 * **Astronaut crew selection.** S. D. Griggs (NASA, Johnson Space Center, Houston, Tex.). In: Space Shuttle: Dawn of an era; Proceedings of the Twenty-sixth Annual Conference, Los Angeles, Calif., October 29-November 1, 1979. Part 1. San Diego, Calif., American Astronautical Society; Univelt, Inc., 1980, p. 29-41. (AAS 79-207)

Thirty-five astronaut candidates were selected by NASA in January 1978, and in August 1979 they completed their initial training and evaluation candidacy status to become designated astronauts eligible for selection to flight crews. The astronauts have been chosen in groups, and to date there have been a total of eight groups selected. This paper examines the basis for the selection criteria, the physiological makeup of the astronauts that types them to the criteria, and some of the testing and evaluation criteria used for the selection. B.J.

A80-28700 **Shuttle payload, manual vs. automated functions.** J. W. Patrick and M. M. Beilock (Rockwell International Corp., Downey, Calif.). In: Space Shuttle: Dawn of an era; Proceedings of the Twenty-sixth Annual Conference, Los Angeles, Calif., October 29-November 1, 1979. Part 1. San Diego, Calif., American Astronautical Society; Univelt, Inc., 1980, p. 63-70. 5 refs. (AAS 79-210)

The paper describes requirements, methodology, and typical design concepts for the application of EVA to Orbiter payloads. The performance improvements and developmental cost benefits gained by providing manual versus automated functions should be considered in the design of Shuttle payloads. EVA capability can help maximize mission success and the scientific return of each project. It is concluded that substantial savings can be realized if Shuttle payloads adopt EVA as a primary mode of operation. B.J.

A80-28707 **Determination of ethylene produced by pea seedlings under near-zero gravity conditions - Preliminary studies.** R. A. Kapteyn, K. E. Kubow, A. J. O'Connor, J. W. Shockley, M. P. Sweet, and C. K. Tyran. In: Space Shuttle: Dawn of an era; Proceedings of the Twenty-sixth Annual Conference, Los Angeles, Calif., October 29-November 1, 1979. Part 2.
San Diego, Calif., American Astronautical Society; Univelt, Inc., 1980, p. 481-485. (AAS 79-216)

The paper describes a proposal to test the involvement of ethylene in the gravitational response of seedlings under four sets of conditions: normal terrestrial gravity, clinostat, enhanced gravity, and near zero gravity. The experimental material will be germinating pea seeds. Attention is given to the preliminary design studies for one aspect of the experiment - growth under near zero gravity conditions. M.E.P.

A80-28713 **Life support in the Shuttle Era.** P. Heimlich, C. Flugel, and R. Galluccio (United Technologies Corp., Hamilton Standard Div., Windsor Locks, Conn.). In: Space Shuttle: Dawn of an era; Proceedings of the Twenty-sixth Annual Conference, Los Angeles, Calif., October 29-November 1, 1979. Part 2. San Diego, Calif., American Astronautical Society; Univelt, Inc., 1980, p. 709-743. (AAS 79-253)

The paper discussed the Space Shuttle, Spacelab, and Extravehicular Mobility Unit Life Support Equipment Systems, which provide the crewmen with habitable work environments while in orbit. Attention is given to system functional descriptions, performance capabilities and typical mission support tasks required of the crew. Finally, it is concluded that as the 'Space Shuttle' era matures, life support system design modifications will result from extended mission requirements and the increased role of extravehicular activity. M.E.P.

A80-28775 **Illusory reversal of extrafoveally perceived displacement.** D. M. MacKay (Keele, University, Keele, Staffs., England). *Nature*, vol. 284, Mar. 20, 1980, p. 257. 8 refs.

An extrafoveal illusion of reversed displacement is reported. The illusion is brought about by the instantaneous deflection of a spot or line on a cathode ray oscilloscope, followed by its slow return to its original position. Viewed 3 or 4 deg from the fovea, the perceived displacement is actually in the opposite direction to the real displacement. The illusion can be quantified by imposing an RC-filtered step deflection of this form on a second cathode ray tube beam viewed foveally, and adjusting its amplitude and time constant until the motion of both spots or lines matches. The illusion is evidence for the computation of extrafoveal location from motion signals, and further experiments at scotopic light levels have shown this integration primarily a function of the cone system. A.L.W.

A80-28786 **Electroretinographic and psychophysical measures of cone spectral mechanisms using the two-color threshold technique.** M. Korth (Northeastern University, Boston, Mass.) and S. Sokol (New England Medical Center; Tufts University, Boston, Mass.). *Vision Research*, vol. 20, no. 3, 1980, p. 205-212. 18 refs. Grants No. NIH-EY-0759; No. NIH-EY-00926.

The two-color threshold paradigm of Stiles (1939) and a spatially alternating bar pattern stimulus were used to derive electrophysiological and psychophysical spectral sensitivity curves from the human retina. The test wavelength was kept constant at 600 nm and the background wavelength was varied from 450 to 650 nm. Three experiments were carried out with two color normal subjects. In the first experiment the original stimulus configuration of Stiles, a 1 deg, 500 msec test flash on a 10 deg background, was used to determine increment threshold curves. In the second experiment, ERGs were recorded with a bar pattern test field with a stripe width of 30 arcmin alternating at a rate of 8 Hz superimposed on a steady background. The diameter of both test and adaptation field was 15 deg. In the third experiment psychophysical thresholds were determined with the same stimulus conditions used to record the ERG. Stiles' pi sub 5 mechanism provides a good fit to the spectral sensitivity curves derived from the increment threshold functions. (Author)

A80-28787 **The influence of colour and contour rivalry on the magnitude of the tilt illusion.** N. J. Wade (Dundee, University, Dundee, Scotland). *Vision Research*, vol. 20, no. 3, 1980, p. 229-233. 15 refs. Research supported by the Medical Research Council.

Tilt illusions were generated in three experiments by surrounding a central grating by another differing in orientation by 10 or 15 deg. The magnitude of the illusion (1) was not influenced by the color of the central and surround grating, (2) was reduced to about 50% under interocular transfer and (3) was unchanged during binocular rivalry between tilted and horizontal surrounds. The results are considered to support the equation of the tilt illusion and aftereffect with regard to the neural mechanisms involved in their generation. (Author)

METHODOLOGY FOR ESTIMATION OF TOTAL BODY COMPOSITION IN LABORATORY MAMMALS

Nello Pace, Donald F. Rahlmann, and Arthur H. Smith 14 Dec. 1979 44 p refs
(Grant NsG-7336)
(NASA-CR-162806; EPL-79-1) Avail: NTIS HC A03/MF A01 CSCL 06C

A standardized dissection and chemical analysis procedure was developed for individual animals of several species in the size range mouse to monkey (15 g to 15 kg). The standardized procedure permits rigorous comparisons to be made both interspecifically and intraspecifically of organ weights and gross chemical composition in mammalian species series, and was applied successfully to laboratory mice, hamsters, rats, guinea pigs, and rabbits, as well as to macaque monkeys. The procedure is described in detail. R.E.S.

THE CARBON ISOTOPE BIOGEOCHEMISTRY OF THE INDIVIDUAL HYDROCARBONS IN BAT GUANO AND THE ECOLOGY OF INSECTIVOROUS BATS IN THE REGION OF CARLSBAD, NEW MEXICO

David J. DesMarais, J. M. Mitchell (Indiana Univ., Bloomington), W. G. Meinschein (Indiana Univ., Bloomington), and J. M. Hayes Feb. 1980 46 p refs
(NASA-TM-81164; A-8056) Avail: NTIS HC A03/MF A01 CSCL 06C

The structures and C-13 contents of individual alkanes extracted from bat guano found in the Carlsbad region of New Mexico can be related to both the photosynthetic pathways of the local plants and the feeding habits of the insects that support the bats. Carbon isotopic analyses of the 62 most important plant species in the Pecos River Valley, the most significant feeding area for the Carlsbad bats, reveal the presence of 29 species with C3 photosynthesis and 33 species, mostly grasses, with C4 photosynthesis. Although the abundances of nonagricultural C3 and C4 plants are similar, alfalfa and cotton, both C3 plants, constitute over 95 per cent of the crop biomass. The molecular composition of the bat guano hydrocarbons is fully consistent with an insect origin. Two isotopically distinct groups of insect branched alkanes were discerned. These two groups of alkanes derived from two chemotaxonomically distinct populations of insects possessing distinctly different feeding habits. It is likely that one population grazes predominantly on crops whereas the other population prefers native vegetation. This and other isotopic evidence supports the notion that crop pests constitute a major percentage of the bats' diet. Author

EFFECT OF RESTRICTED MOTION IN HIGH TEMPERATURE ON ENZYMATIC ACTIVITY OF THE PANCREAS

A. Abdusattarov and G. I. Smirnova Feb. 1980 6 p refs Transl. into ENGLISH from Uzbeksk. Biol. Zh. (USSR), no. 1, 1979 p 35-37 Transl. by Sci. Transl. Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76063) Avail: NTIS HC A02/MF A01 CSCL 06C

Effects of 30 day hypodynamia coupled with high temperature (35-36 C) on enzymatic activity of the pancreas of male adult rats were studied. The test animals were divided into four groups. Group one served as controls (freedom of movement and a temperature of 25-26 C, considered optimal). The remaining animals were divided into three additional groups: Group two freedom of movement but high temperature (35-36 C); group three hypodynamia but an optimal temperature; group four hypodynamia and 35-36 C. Considerable change in the enzymatic activity in the pancreas of the four groups is observed in three experimental groups (two, three, and four) as compared to the control (group one). The results indicate that adaption of the organism to the thermal factor and restricted movement is accompanied by a change in the enzymatic spectrum of the pancreas. With the combined effect of these two stresses under conditions of the adaption of the organism especially sharp shifts occur in the enzymatic activity. R.E.S.

EFFECT OF CONSECUTIVE COOLING AND IMMOBILIZATION ON CATECHOLAMINE METABOLISM IN RAT TISSUES

E. Sh. Matlina, S. M. Waysman, I. G. Zaydner, B. M. Kogan, and L. V. Nozdracheva Nov. 1979 19 p refs Transl. into ENGLISH from Fiziol. Zh. SSSR (USSR), v. 60, no. 4, Apr. 1974 p 540-547 Trans. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-75962) Avail: NTIS HC A02/MF A01 CSCL 06C

The combined effect of two stressor stimuli--cooling and immobilization--acting successively on the sympathetic-adrenaline system was studied experimentally in rats that were cooled for 8 hours at 7 C on the first day and immobilized for 6 hours on the next day. The biochemical and histochemical methods used and the experimental technique involved are described in detail. The following conclusions were formulated: (1) the successive action of cooling and immobilization results in a stronger decrease in the adrenaline and noradrenaline content in the adrenal gland than that which could be due to a simple summation of the cooling and immobilization effects; (2) successive cooling and immobilization are followed by activation of catecholamine synthesis in the adrenal gland; and (3) 1-DOPA administration (45 mg/kg 3 times in 2 days) intraabdominally activated catecholamine synthesis in the adrenal glands in both the control and test animals. THE EFFECTS OF ADRENALECTOMY AND CORTICSTEROID INJECTION ON THE FIBRINOLYTIC ACTIVITY OF COMPLEX HEPARIN COMPOUNDS IN THE BLOOD DURING IMMOBILIZATION

B. A. Kudryashov, E. G. Lomovskaya, F. B. Shapiro, and L. Ya. Lyapina Feb. 1980 11 p refs Transl. into ENGLISH from Fiziol. Zh. SSSR (USSR), v. 59, no. 7, 1973 p 1108-1113 Original language document announced as A75-31019 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prepared by Moscow State Univ., USSR
(Contract NASw-3199)
(NASA-TM-75985) Avail: NTIS HC A02/MF A01 CSCL 06C

Total non-enzymatic fibrinolytic activity in the blood of rats increased three times in response to stress caused by 30 minute immobilization, and the activity of epinephrine-heparin complex increased nine times. In adrenalectomized animals, which showed a weak response to the same stress, intraperitoneal injection of hydrocortisone 30 minutes prior to immobilization normalized the response. Obtained results indicate that adrenalectomy leads to sharp reduction of heparin complexing with thromogenic proteins and epinephrine, while substitution therapy with hydrocortisone restores anticoagulation system function. Reactions to hypoxia and hypoknesia were compared by measuring charges in the amount of ribonucleic acid (RNA) in the cytoplasm of neurons of the intumescentia cervicalis and lumbalis. Animals were subjected to hypoxia, hypokinesia and both combined and a control group to neither. A total of two groups of motoneurons were compared, one innervating the respiratory musculature, the other the musculature of the lower extremities, so that hypoxic hypoxia would probably affect the first group primarily and hypokinesia the second. Results indicate that neither affect the amount of RNA in the neurons of the first group but a significant increase is noted in neurons of the second group. Other significant results are reported. INTRA-OCULAR PRESSURE NORMALIZATION TECHNIQUE AND EQUIPMENT Patent

William J. McGannon, inventor (to NASA) Issued 22 Jan. 1980 5 p Filed 31 Aug. 1977 Supersedes N77-30727 (15 - 21, p 2839)
(NASA-Case-LEW-12723-1; US-Patent-4,184,491;
US-Patent-Appl-SN-829317; US-Patent-Class-128-276;
US-Patent-Class-128-760) Avail: US Patent and Trademark Office CSCL 06B

A method and apparatus for safely reducing abnormally high intraocular pressure in an eye during a predetermined time interval is presented. This allows maintenance of normal intraocular pressure during glaucoma surgery. According to the invention, a pressure regulator of the spring biased diaphragm type is provided with additional bias by a column of liquid. The height of the column of liquid is selected such that the pressure at a hypodermic needle connected to the output of the pressure regulator is equal to the measured pressure of the eye. The hypodermic needle can then be safely inserted into the anterior chamber of the eye. Liquid is then bled out of the column to reduce the bias on the diaphragm of the pressure regulator and, consequently, the output pressure of the regulator. This lowering pressure of the regulator also occurs in the eye by means of a small second bleed path provided between the pressure regulator and the hypodermic needle. Alternately, a second hypodermic needle may be inserted into the eye to provide a controlled leak off path for excessive pressure and clouded fluid from the anterior chamber.

INDUCTION POWERED BIOLOGICAL RADIOSONDE Patent

Thomas B. Fryer, inventor (to NASA) Issued 5 Feb. 1980 12 p Filed 12 May 1977 Supersedes N77-23743 (16 - 14, p 1894)
(NASA-Case-ARC-11120-1; US-Patent-4,186,749; US-Patent-Appl-SN-796256; US-Patent-Class-128-748; US-Patent-Class-128-903; US-Patent-Class-73-724) Avail: US Patent and Trademark Office CSCL 06B

An induction powered implanted monitor for epidurally measuring intracranial pressure and telemetering the pressure information to a remote readout is disclosed. The monitor utilizes an inductance-capacitance (L-C) oscillator in which the C comprises a variable capacitance transducer, one electrode of which is a small stiff pressure responsive diaphragm. The oscillator is isolated from a transmitting tank circuit by a buffer circuit and all electric components in the implanted unit except an input and an output coil are shielded by a metal housing.

THE EFFECTS OF SPECTRAL DENSITY AND STIMULUS INTENSITY ON THE ELICITATION OF THE ACOUSTIC REFLEX Ph.D. Thesis

Colleen Ann Mcaleer 1979 159 p
Avail: Univ. Microfilms Order No. 8003475

The acoustic reflex (AR) responses of normal hearing and hearing-impaired subjects elicited by moderate and high tensity stimuli when the stimulus energy was contained within an AR critical band were compared. The effects of minimum and maximum spectral density of the elicitation and growth of the AR were also investigated. The results show that ARTs were higher in dB sound pressure level for all four stimulus conditions for the hearing-impared than for the normal hearing subjects. Additionally, stimulus spectral density within a critical band had a differential effect on the elicitation of the AR for normal hearing and hearing-impaired subjects. The differences between the AR responses of normal hearing and hearing-impaired subjects could be attributed to the anatomical and physiological changes that accompany a noise-induced hearing loss. Dissert. Abstr.

N80-18693 Florida Univ., Gainesville.

FATIGUE IN SKELETAL MUSCLE Ph.D. Thesis

Brian Robert Macintosh 1979 118 p
Avail: Univ. Microfilms Order No. 8002876

Skeletal muscle fatigue is examined utilizing an in situ dog gastrocnemius-plantaris muscle preparation. Skeletal muscle fatigue (reduced force output for a given stimulus) results from a thirty minute period of isometric contractions at 2.5 to 20/sec. This fatigue is not a result of failure of motor nerve propagation or transmitter release. The ratio of oxygen uptake to developed tension is unaltered during or following fatiguing contractions. Energy sources are available and with maximal activation the contractile mechanism is capable of the same force output it had before the fatiguing contractions. Further, there is no reduction in twitch developed tension associated with intracellular acidosis. It appears that twitch fatigue results from a reduced activation of the myofilaments during a twitch contraction. This may be due to either a reduced sarcoplasmic Ca2(+) concentration during contraction or a reduced response of the myofilaments at a given CA2(+) concentration. Dissert. Abstr.

MICROVASCULAR DETERMINANTS OF OXYGEN SUPPLY IN RESTING AND CONTRACTING STRIATED MUSCLE Ph.D. Thesis

Bruce Maurice Klitzman 1979 138 p
Avail: Univ. Microfilms Order No. 8002544

The alteration of striated muscle oxygen supply in response to increases in oxygen demand induced by twitch contraction was examined. The approach taken was to measure the four most important microvascular determinants of tissue oxygen supply: arteriolar diameter, capillary density, tissue PO2, and hematocrit. Using the results of this study obtained at the microvascular level, muscle oxygen consumption was estimated to increase 9.8 fold with 1 Hz twitch contraction. Perfused muscle studies have found an increase of 8 fold with 1 Hz contraction. These results from microvascular and whole organ studies are remarkably close, indicating that the parameters chosen in this study as determinants of oxygen supply do in fact accurately relfect oxygen supply when considered collectively.

Dissert. Abstr.

CIRCADIAN RHYTHMICITY IN VENTRICULAR MYOCARDIAL AND DIAPHRAGMATIC METABOLISM Ph.D. Thesis

Susan Marie Garthwaite 1979 121 p
Avail: Univ. Microfilms Order No. 8002361

Circadian rhythm studies were utilized to elucidate metabolic mechanisms operative in ventricle and diaphragm of unstressed animals. Male Wistar rats were sampled after two weeks of entrainment to a 12L:12D light cycle in which the lights came on at 0600 hours and went off at 1800 hours. Food and water were available ad lib. Ventricular and diaphragmatic samples were obtained from each rat at 4 hour intervals during the 24 hour cycle. Weight of the stomach contents of the same rats was also determined as an index of food consumption. A circadian rhythm in ventricular glycogen was found with a peak at 0600 hours and a nadir at 1800 hours. Ventricular free fatty acid and triglyceride levels also showed a circadian rhythm, but 180 deg out of phase with the glycogen rhythm. A circadian rhythm of diaphragmatic glycogen was found with a peak value preceding the ventricular glycogen peak by about 4 hours. Other significant results are reported. Dissert. Abstr.

N80-18696 Arizona Univ., Tucson.

MUSCULAR FORCE-VELOCITY ALTERATIONS CONSEQUENT TO SLOW AND FAST VELOCITY POWER TRAINING Ph.D. Thesis

Edward Francis Coyle 1979 77 p
Avail: Univ. Microfilms Order No. 8003049

Muscular force-velocity alterations were compared to slow and fast velocity power training. Active males trained the knee extensors of both legs simultaneously for six weeks, three times per week, by attempting to generate maximal peak torque (MPT) with each repetition at velocities of 60 deg/sec (MPT/60), 300 deg/sec (MPT/300), or both. Fast training significantly improved MPT uniformly (16-21%) at the training velocity as well as at slower velocities. Only the MPT/180 and MPT/300 improvements contained a significant physiological component of adaptation. High tension producing contractions appear necessary to improve MPT/slow while fast training velocities must be employed to improve MPT/fast. Fast training improves MPT in the mid-velocities more effectively than does slow training. Dissert. Abstr.

N80-18697 Arizona Univ., Tucson.

MODELS OF HUMAN VISION IN DIGITAL IMAGE BANDWIDTH COMPRESSION Ph.D. Thesis

Douglas James Granrath 1979 181 p
Avail: Univ. Microfilms Order No. 8003051

The study of human vision is applied to the problem of reducing the amount of information necessary to represent an image. Relevant vision research is reviewed, including eye and retina anatomy, membrane potential recordings, and psychophysical studies. Current engineering models of human vision are discussed in terms of their structural similarities to the eye. A two-channel model of spatial interaction in the retina is then developed based on retinal cell structure and related experimental results. Analysis of this model shows that one of the channels carries mainly image contrast information while the other carries edge detail. Computer simulation results demonstrate a bandwidth reduction potential from 6 bits per pixel down to 2 bits per pixel for the model. Suggestions for further research include use of the two-channel model to predict image quality. Dissert. Abstr.

N80-18698 Lehigh Univ., Bethlehem, Pa.
MATHEMATICAL ANALYSIS OF CARBON DIOXIDE TRANSPORT BY BLOOD Ph.D. Thesis
Ramon Fayad 1979 191 p
Avail: Univ. Microfilms Order No. 8003061

A theoretical analysis of acid-base balance at the microcirculatory level is presented. A mathematical model that includes the physiological and biochemical processes important to carbon dioxide transport by blood is constructed. Using perturbation and time scale techniques to study the steady-state problem, analytic solutions are obtained for the cases when no change in saturation of hemoglobin occurs and when a linear decrease in oxygenation of blood from the arterial to the venous end of the capillary occurs. The extent to which the various processes contribute to carbon dioxide transport by blood is determined, and it is found that while the dependence of CO2 exchange on O2 (Haldane effect) accounts for 40% of carbon dioxide transport, the magnitude of the Bohr effect is rather small. Dissert. Abstr.

N80-18699 George Washington Univ., Washington, D. C.
CONTINUOUS REAL-TIME AUDITORY EVOKED POTENTIALS USING A SLIDING WINDOW OF AVERAGES Ph.D. Thesis
Nicholas Anthony Diakides 1979 195 p
Avail: Univ. Microfilms Order No. 8003453

Procedures and computer instrumentation which would advance the state of the art in auditory evoked response (AER) measurement, especially to alleviate the need for prolonged testing periods required by the traditional method of AER measurement were developed. The key to an improved method lay in the use of high rates of presentation of auditory stimuli, i.e., 20-50 Hz, and a means of continuously averaging and updating the output data (sliding window of averages). The high stimulus rates would allow more responses to be obtained and evaluated in a very short time, i.e., a few seconds. A clearly observable enhancement of AER amplitude was found at and around 45 Hz with correspondingly high signal-to-noise ratios (SNRs) when referenced to ongoing EEG background activity levels. Having demonstrated the fundamental phenomenon of AER and SNR enhancement at high stimulus frequencies, a low cost microcomputer system and operational algorithm were developed and successfully tested. Dissert. Abstr.

MASS TRANSFER STUDIES OF PULMONARY FUNCTION Ph.D. Thesis
Simon Hallifax Hobbs 1979 282 p
Avail: Univ. Microfilms Order No. 7928647

A comprehensive lung model was developed which takes into account both diffusion and ventilation distribution effects. Particlar emphasis was placed on the simulation of the pulmonary transport of insoluble inert gases, especially nitrogen, helium, and sulfur hexafluoride, which are commonly used in respiratory diagnostic testing. An expression was developed to describe individual lung unit alveolar gas concentrations, in terms of the most important lung parameters. The ventilation distribution found throughout the lung was the critical factor controlling gas concentration since it severely limited transport of gas into poorly ventilated lung regions. Dissert. Abstr.

N80-18701 Commission of the European Communities, Luxembourg.
THE RADIATION PROTECTION PROGRAM Annual Report, 1977
1978 798 p refs Partly in ENGLISH, FRENCH and GERMAN
(EUR-5972; ISBN-92-825-0184-1) Copyright. Avail: Issuing Activity

Five hundred seventy-four papers published as a result of research are presented under six headings. These are dosimetry, radioactive contamination of the environment, hereditary effects of ionizing radiation, somatic short-term effects of ionizing radiation, somatic long-term effects of ionizing radiation, and evaluation of radiation risks. Much research was undertaken into the damaging effects of radiation on chromosomes and other genetic material. Somatic effects of radiation in the induction of leukemia and carcinogenesis as well as the controlled use of radiation in the treatment of diseases were studied. The environmental impact of radiation on the water cycle and food chain are also covered. Author (ESA)

THE HUMAN BODY TEMPERATURE REGULATION SYSTEM
J. Werner Sep. 1979 24 p refs Transl. into ENGLISH from Biol. Cybernetics (West Germany), v. 17, 1975, p 53-63
(RAE-Lib-Trans-2019; BR71910) Avail: NTIS HC A02/MF A01

The control loop of human body temperature is treated as a distributed parameter system. The equations of heat balance are formulated, admitting discontinuities of parameters. Using two successive integral transformations and an expansion with eigenfunctions, an analytical solution is found for the closed control loop. Regarding the stationary as well as the dynamic behavior, the mathematical results are on the whole compatible with experimental results. K.L.

SIZE AND LUMINANCE DISCRIMINATION IN THE PERIPHERAL VISUAL FIELD
Stephen E. Jenkins Oct. 1979 28 p refs
(MRL-R-760; AR-001-843) Avail: NTIS HC A03/MF A01

The discrimination of length differences between two bars as well as size and luminance differences between two discs was measured as a function of the angle of eccentricity between the fixation point and the stimulus. The experiments provided basic data necessary for the interpretation of experiments involving the detection of discs embedded in a complex background which in turn elucidate the determinants of camouflage. It was found that, (1) discs are discriminated in size by virtue of their difference in diameter rather than their difference in area; (2) the 50% and 90% levels of detection probability of size and luminance contrast between two discs are linear functions of eccentricity at least to 14 deg eccentricity; (3) the visual system is better at discriminating size contrast at all eccentricities tested than it is at discriminating luminance contrast; and (4) there is a fundamental difference between the mechanisms which mediate size and luminance discrimination. K.L.

PHYSIOLOGIC REACTIONS DURING FIVE WEEKS OF CONTINUOUS RESIDENCE IN AN ARTIFICIAL HUMID AND HOT CLIMATE

Ulrich Laaser Oct. 1979 24 p refs Transl. into ENGLISH from Int. Z. Angew. Physiol. (West Germany), v. 25, 1968 p 279-302 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prepared by Tuebingen Univ., West Germany
(Contract NASw-3199)
(NASA-TM-75356) Avail: NTIS HC A02/MF A01 CSCL 06S

During 5 weeks in a climatic room, total sweat during work almost doubled. Initial hour differences increasingly equalized. There was a displacement of sweat secretion from trunk to extremities till the end of week 3, occurring earlier and more clearly for the arm than for the leg. Work temperatures dropped rapidly and evenly to a constant level by day 11. Circulation behavior matched that of temperature. Pulse rate during work dropped like rectal temperature and pulse rate during rest was phasically like the pattern of corresponding temperatures. Except for the first days urine output was adequate and even, Na decreasing in the urine until week 3, then returning to initial values. Na and K in sweat declined but with opposite patterns for hours 1-4. Total salt elimination decreased. The conclusive phenomena of redistribution occurred within the first 3 weeks. A few functions changed later also. Relatively trivial changes in an otherwise uniform reaction pattern indicated that after 3 or even 5 weeks of acclimatization the process is not over or at least not completely so. The tempo of the process appears to be a function of the degree of loading. Author

EFFECT OF HYPOKINESIA ON CONTRACTILE FUNCTION OF CARDIAC MUSCLE

F. Z. Meyerson, V. I. Kapelko, A. M. Trikhpoyeva, and M. S. Gorina Feb. 1980 12 p refs Transl. into ENGLISH from Kardiologiya (USSR), no. 2, Feb. 1979 p 71-76 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76061) Avail: NTIS HC A02/MF A01 CSCL 06S

Rats were subjected to hypokinesia for two months and the contractile function of isolated papillary muscle was studied. Hypokinesia reduced significantly the isotonic contraction rate which depended on the ATPase activity of the myofibrils; it also reduced the rate and index of relaxation which depended on the functional capacity of the Ca(++) pump of the sarcoplasmic reticulum. The maximum force of isometric contraction determined by the quantity of actomyosin bridges in the myofibrils did not change after hypokinesia. This complex of changes is contrary to that observed in adaptation to exercise when the rate of isotonic contraction and relaxation increases while the force of isometric contraction does not change. The possible mechanism of this stability of the contractile force during adaptation and readaptation of the heart is discussed. Author

OBJECTIVE MEASUREMENT OF HUMAN TOLERANCE TO +G SUB Z ACCELERATION STRESS Ph.D. Thesis - Univ. of N. Indiana

Salvadore A. Rositano Washington Feb. 1980 100 p refs
(NASA-TM-81166; A-8059) Avail: NTIS HC A05/MF A01 CSCL 06S

The efficacy of a new objective technique using a transcutaneous Doppler flowmeter to monitor superficial temporal artery blood flow velocity during acceleration was investigated. The results were correlated with current objective and subjective G tolerance end points. In over 1300 centrifuge runs, retrograde eye level blood flow leading to total flow cessation was consistently recorded and preceded visual field deterioration leading to blackout by 3 to 23 seconds. The new method was successfully applied as an objective indication of tolerance in a variety of test situations including evaluation of g-suits, straining maneuvers, and 13 deg, 45 deg and 65 deg set back angles. R.E.S.

EFFECTS OF GRAVITATIONAL STRESS, HYPOKINESIA AND HYPODYNAMIA ON THE STRUCTURE OF THE VASCULAR BED OF THE SPLEEN

N. T. Nesterenko Feb. 1980 12 p refs Transl. into ENGLISH from Arkh. Anat., Gistol. Embriol. (USSR), v. 64, no. 5, 1973 p 44-51 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prepared by 1st Leningrad I. P. Pavlov, Medical Inst.
(Contract NASw-3199)
(NASA-TM-75934) Avail: NTIS HC A02/MF A01 CSCL 06S

The effects of two extreme factors, hypokinesia and hypodynamia, on spleen vascular beds were studied on 180 male and female albino rats. Vessels were studied by roentgenography, microroentgenography, clearing of sections and histology.

Gravity stress yielded construction of all links of arterial bed and of order 5-7 veins. Large intraorganic vein diameters changed significantly but erratically. Hypokinesia in early phases produced pronounced spleen size reduction. Veins and arteries constricted along entire length. Later hypokinetic stages showed arteries still constricted; veins began to dilate from week 4 of hypokinesia. Sinuosity, uneven contours and varicose dilations of walls in large arteries and veins occurred. Abrupt changes in parenchyma, e.g., atrophy of folliculi, narrowing of lumen of central arteries from thickening of muscular wall. After exposure to hypokinesia followed by gravitational stress, pronounced lesions such as deformation of vascular wall, including rupture, in all vessels of the spleen vascular bed. R.E.S.

VIBRATION INJURIES OF THE HAND AND ARM: THEIR OCCURENCE AND THE EVOLUTION OF STANDARDS AND LIMITS

M. J. Griffin Jul. 1979 85 p refs

(Contract HSE-1653/45.09)

(ISVR-TR-101) Avail: NTIS HC A05/MF A01

Alternative methods of rating the serverity of vibration exposures for the hand and arm are compared. The difficulties associated with the formulation of useful vibration standards and limits are discussed and deficiencies in present standards are outlined. Specific recommendations concerning the formulation of standards and limits are offered. Desirable objectives for surveys of worker health, tool vibration characteristics, and working methods are defined. The need for reducing and isolating tool vibration is identified along with the importance of tool gripping methods. It is suggested that an improved understanding of the nature of vibration injuries and their symptoms is required. Author (ESA)

APPLICATION OF MUTUAL AMOUNT OF INFORMATION FOR TIME DELAY ESTIMATION Ph.D. Thesis

G. W. vanArragon 6 Aug. 1979 80 p refs Partly in ENGLISH and DUTCH

(THT-210) Avail: NTIS HC A05/MF A01

An estimate for the average mutual amount of information (AMAI) as a function of time delay between two time series was developed. This estimate is intended for analyzing the spread of an epileptic seizure through the cortical layers of the brain of an epileptic patient based on an ictal EEG recording. The theory of mutual amount of information is reviewed. It depends on the marginal and joint probability densities of two time series. An estimator for the joint (bi-variate) density is proposed and compared with estimators described in the literature. Results show that the proposed estimator is the best for practical AMAI estimation. A computer algorithm for AMAI estimation was derived and its behavior studied using test data. Promising results lead to its inclusion in an interactive FORTRAN program which is available as part of an EEG analysis library for special purposes. Author (ESA)

THE POWER PROCESS: A SYNTHESIS THEORY OF POWER Ph.D. Thesis

Steven Howard Graubard 1979 418 p

Avail: Univ. Microfilms Order No. 8003230

A series of studies designed to test the process approach to power is offered. In order to describe the power process adequately, a blend of phenomenological and empirical methods is suggested. Phenomenological techniques are expected to yield subjects' descriptions, thoughts and feelings associated with power related experiences. This data is analyzed for thematic content as it relates to each of the four power process components and compared with data obtained from empirical measures. Experimental situations, including small group interactions, individual tasks, experimental descriptions, and specific psychological tests, are suggested. Implications for future research are discussed. Dissert. Abstr.

PILOT SELECTION USING PSYCHOLOGICAL METHODS [URVAL AV FLYGFOERARE MGD PSYKOLDGISKA METODGR]

Leif Carlstedt Mar. 1979 62 p refs In SWEDISH

(FOA-C-55024-H7) Avail: NTIS HC A04/MF A01

The use of psychological methods in military aircraft pilot selection is surveyed, covering the period from World War 1 to 1979. The methods of analysis used have different starting points, stressing either the man or the function characteristics. A multiple regression statistical evaluation model is most frequently used resulting in some compensation of psychological characteristics. No examples of normative evaluation models were found in recent pilot selection methods. Author (ESA)

N80-18717 Arizona State Univ., Tempe.

MODELING REQUIREMENTS FOR NETWORK SIMULATION OF HUMAN-MACHINE SYSTEMS Ph.D. Thesis

Gayle Lynn Berry 1979 335 p

Avail: Univ. Microfilms Order No. 8003862

A critical review of eight task taxonomies was performed. Each taxonomy was ranked against a set of criteria which were developed to select for usefulness in modeling human machine systems. The standard task analysis procedure was revised so that all information required for a network computer simulation of a human machine system would be produced. The two highest ranking task taxonomies were used in the task analysis procedure to model a test case human machine system. A SAINT computer simulation was performed for each of the two resulting models. For each simulation model, both Normal and Weibull distributions were used in four different combinations to represent human task performance time. In order to make it possible to use the Weibull distribution when no sample data were available, a method was developed to derive the Weibull parameters for shape and scale from an estimated mean and standard deviation. Dissert. Abstr.

STS MISSION DURATION ENHANCEMENT STUDY: (ORBITER HABITABILITY) Final Report

A. D. Carlson Dec. 1979 145 p

(Contract NAS9-15903)

(NASA-CR-160535; SOD-79-0321) Avail: NTIS HC A07/MF A01

Habitability improvements for early flights that could be implemented with minimum impact were investigated. These included: (1) launching the water dispenser in the on-orbit position instead of in a locker; (2) the sleep pallet concept; and (3) suction cup foot restraints. Past studies that used volumetric terms and requirements for crew size versus mission duration were reviewed and common definitions of key habitability terms were established. An accurately dimensioned drawing of the orbiter mid-deck, locating all of the known major elements was developed. Finally, it was established that orbiter duration and crew size can be increased with minimum modificattion and impact to the crew module. Preliminary concepts of the aft med-deck, external versions of expanded tunnel adapters (ETA), and interior concepts of ETA-3 were developed and comparison charts showing the various factors of volume, weight, duration, size, impact to orbiter, and number of sleep stations were generated. A NEW ANTI-G VALUE FOR HIGH-PERFORMANCE AIRCRAFT Final Report, 1 Jan. 1977 - 1 Jan. 1979

Russell R. Burton, Robert M. Shaffstall, Jamy L. Jaggers, Kent K. Gillingham, and Kennith W. Stevens Nov. 1979 25 p
(AF Proj. 7930)
(AD-A076904; SAM-TR-79-27) Avail: NTIS HC A02/MF A01 CSCL 22/1

The USAF School of Aerospace Medicine (USAFSAM) Crew Technology Division has developed an advanced anti-G valve for pressurizing the anti-G suit during exposures to acceleration. The anti-G valve presently in fighter aircraft has been determined to operate too slowly for rapid onset of G, potentially causing pilots of high-performance aircraft to black out, lose consciousness, and/or become fatigued. The time relationship to G-suit pressurization using the conventional anti-G valve was found to be sigmoidal, having two relatively slow pressurization phases--one early, and the other late--in the suit-inflation schedule. Elimination of these two slow phases were accomplished by: (1) preinflating the anti-G suit to 0.2 psi prior to an increase in G (called 'Ready Pressure'), and (2) increasing the capacity of air flow through the anti-G valve (called 'Hi-Flow'). The development of the Hi-Flow Ready Pressure (HFRP) anti-G valve by USAFSAM increased in the rate of G-suit pressurization threefold. This HFRP anti-G valve was tested on eight F-15 pilots, using the centrifuge at the Naval Air Development Center, Warminster, Pa. A comparison of this experimental valve with the conventional anti-G valve (presently operational in the F-15 aircraft) resulted in a high degree of pilot acceptance, because the HFRP valve had better valve response, reduced valve error scores, and allowed the pilots to tolerate high-G exposures with less effort. GRA

PROTOTYPE: PRELIMINARY STUDY ON EMERGENCY BREATHING APPARATUS [FRISKLUFTHJAELM 1 PROTOTYP. FOERSTUDIUM]

Tage Berglund Jun. 1979 17 p In SWEDISH
(FOA-C-40103-C2) Avail: NTIS HC A02/MF A01

Some developmental alternatives for the protection helmet M-51 are discussed in terms of military aircraft application. A helmet prototype is described, including four complete mask alternatives. It is concluded that all four designs and the helmet prototype are acceptable, but improvements are necessary in all cases. Author (ESA)

SUGGESTIONS FOR THE CONTENTS OF THE AVIATION BOARD SURVIVAL KIT [FOERSLAG TILL INNEHAALL I FV NOEDUTRUSTNINGSPACKE]

Ove Wilson, Christer Spaangberg, and Bo Ekberger Aug. 1979 56 p refs In SWEDISH
(FOA-A-59004-H3(H9)) Avail: NTIS HC A04/MF A01

Survival equipment for aircrews operating over land and sea in arctic climates is described. Survival techniques are discussed in relation the contents of a proposed survival kit, including the requirements for protection from the elements, food and water, signaling, first aid, and weapons. The various kit materials are either attached to the life jacket, the flight suit, the life raft, or are found in a separate container. Author (ESA)

NASA STANDARD PROCEDURES FOR THE MICROBIOLOGICAL EXAMINATION OF SPACE HARDWARE

Feb. 1980 31 p refs
(NASA-TM-80756; NHB-5340.1B) Avail: NTIS MF A01; SOD HC CSCL 06B

Microbiological assay procedures are described which assess the degree of microbial contamination of intramural environments where spacecraft hardware is assembled, tested and launched and also assess the level of microbial contamination on spacecraft hardware in relation to the known or anticipated environments of the target planets. It is emphasized that uniformity of procedures is of primary importance. However, portions of these procedures are written to include a degree of flexibility in that alternate techniques are described. Any change in these procedures, other than those specifically mentioned in alternate sections, is considered a deviation. R.C.T.

EFFECT OF GRADED PHYSICAL LOAD ON THE STATE OF THE LIVER FROM MORPHOMETRIC DATA AND BIOCHEMICAL BLOOD INDICES OF RATS AGAINST A BACKGROUND OF HYPOKINESIA

B. A. Nikityuk, B. I. Kogan, V. A. Yermolyev, and L. V. Tindare Feb. 1980 8 p refs Transl. into ENGLISH from Patol. Fiziol. Eksp. Ter. (USSR), no. 4, Jul. - Aug. 1978 p 32-35 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-75969) Avail: NTIS HC A02/MF A01 CSCL 06C

Tests were conducted on 100 sexually immature inbred August and Wistar male rats in order to determine the effects hypokinesia, physical load and phenamine on the liver. Weight and linear dimension fell in hypokinesia; total serum protein lowered and aldolase and cholesterol and beta-lipoprotein levels rose. Blood sugar content rose and liver glycogen fell. Interlinear differences of these indices are found. Rehabilitated physical loading against hypokinesia background diminished and at times completely prevented its negative effect. Extent of correction depended on animal species. Evidence of genotypical conditionality of organism adaptation to physical load in hypokinesia was found. R.E.S.

EFFECTIVENESS OF USING THYROCALCITONIN FOR THE PREVENTION OF A CALCIUM METABOLIC DISORDER IN THE MINERALIZED TISSUES OF RABBITS WITH 30 DAYS HYPOKINESIA

A. I. Volozhin, V. S. Shashkov, B. S. Dmitriyev, B. B. Yegorov, V. I. Lobachik, and A. I. Brishin Mar. 1980 11 p refs Transl. into ENGLISH from Patol. Fiziol. Eksp. Ter. (USSR), v. 10, no. 2, May 1974, p 42-46 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-75987) Avail: NTIS HC A02/MF A01 CSCL 06C

A 30 day hypokinesia in rabbits led to a considerable lag in weight gain for the skeletal bones, reduction in Ca45 uptake, and an increase in isotope resorption rate in the rapidly metabolized fraction of extremity bones. On the other hand, Ca45 content in the teeth and maxillae increased, which may be explained by redistribution of isotope among the various *mineralized tissues. Injection of thyrocalcitonin (50 IU/day)* produced a distinct normalizing effect on Ca45 uptake and resorption in the mineralized tissues of rabbits kept hypokinetic. Author

DYNAMICS OF ERYTHROCYTE COUNT, HEMOGLOBIN, AND CATALASE ACTIVITY IN RAT BLOOD IN HYPOKINESIA, MUSCULAR ACTIVITY AND RESTORATION

G. V. Taneyeva, G. M. Potapovich, N. A. Voloshko, and A. B. Uteshev Feb. 1980 8 p refs Transl. into ENGLISH from Izv. Akad. Nauk Kaz. SSR, Ser. Biol., (USSR), no. 1, 1979 p 71-74 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-76058) Avail: NTIS HC A02/MF A01 CSCL 06C

Tests were conducted to prove that muscular exertion (in this instance swimming) of different duration and intensity, as well as hypodynamia, result in an increase of hemoglobin and number of red blood cells in peripheral blood rats. Catalase activity increased with an increase in the duration of swimming, but only up to 6 hr; with 7-9 hr of swimming as well as in hypodynamia, catalase activity decreased. It was also observed that under hypodynamia as well as in 3, 5 and 6 hr exertion (swimming) the color index of blood decreased. Pressure chamber treatment (for 8 min each day for one week), alternating a 2 min negative pressure up to 35 mm Hg with 1 min positive pressure, increased the erythrocyte count and hemoglobin content. R.E.S.

STATE OF THE MINERAL COMPONENT OF RAT BONE TISSUE DURING HYPOKINESIA AND THE RECOVERY PERIOD

A. I. Volozhin, G. P. Stupakov, M. N. Pavlova, and I. Sh. Muradov Mar. 1980 8 p refs Transl. into ENGLISH from Patol. Fiziol. Eksp. Ter., (USSR), no. 2, 1979 p 30-33 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-76059) Avail: NTIS HC A02/MF A01 CSCL 06C

Experiments were conducted on young growing rats. Hypokinesia lasting from 20 to 200 days caused retarded gain in weight and volume of the femur and delayed development of the cortical layer of the diaphysis. In contrast, the density of the cortical layer of the femoral diaphysis increased due to elevation of the mineral saturation of the bone tissue microstructures. Incorporation of Ca into the bone tissue in hypokinesia had a tendency to reduce. Partial normalization of the bone tissue mineral component occurred during a 20 day recovery period following hypokinesia. R.E.S.

REACTION OF CHICKENS TO GRADUATED LENGTH OF EXPOSURE TO STRESS

J. Nvota, A. Grom, and A. Faberova Mar. 1980 14 p refs Transl. into ENGLISH from Biologia (Bratislava)(Czechoslovakia), v. 25, no. 11, 1970 p 797-803 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by Slovak Acad. of Sci. and the Res. Inst. for Poultry breeding
(NASA-TM-76071) Avail: NTIS HC A02/MF A01 CSCL 06C

The reactions of 60 day old chickens Arbor Acres 60 X Vantress to immobilization stress lasting 1/2, 1, 2, 4 hours and to application of ACTH, manifested by activity changes in the systems hypophysis-adrenal gland and hypophysis-thyroid gland were studied. The highest activity increase in the two neuroendocrine systems of the chickens was found to occur after 1/2 hour exposure to stress. With prolonged stress the responses weakened and after 4 hours most of the values gradually regressed to their initial level. The responses of both systems were synchronized. Reactions of the chickens differed from those of laboratory rats in which an increased activity of the hypophysis-adrenal gland system coincided with attenuation of the hypophysis-thyroid gland system. R.E.S.

USSR REPORT: SPACE BIOLOGY AND AEROSPACE MEDICINE, V. 14, NO. 1

O. G. Gazenko, ed. 5 Mar. 1980 148 p refs Transl. into ENGLISH of Kosmicheskaya Biologiya i Aviakosmicheskaya Meditsina (Moscow) 88 p
(JPRS-75251) Avail: NTIS HC A07/MF A01

Physiological and biological effects of manned space flight are considered with emphasis on long duration space flight. Reactions to altering work-rest cycles, hypocia, hypokinesia, and to head-pelvis accelerations are among the topics covered.

N80-19756# Joint Publications Research Service, Arlington, Va.

SCHEDULING WORK AND REST PERIODS DURING LONG-TERM SPACE FLIGHTS

B. S. Alyakrinskiy *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1 (JPRS-75251) 5 Mar. 1980 p 1-14 refs Transl. into ENGLISH from Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 3-8

Avail: NTIS HC A07/MF A01

A brief survey of space ergonomics, a field of science studying man's work capacity and methods of increasing efficiency is given. Emphasis is placed on the proper arrangement of work-rest cycles of crewmembers in long-duration space flight in order to optimize cosmonauts' activities in space. The usefulness of the laws of biorhythmology is also discussed. It is recommended that work-rest cycles in a prolonged space flight be arranged on a 24 hour basis with a normal day-night alternation, including an 8 hour night sleep and a 2 hour day rest. J.M.S.

N80-19757# Joint Publications Research Service, Arlington, Va.

EFFECTS OF FLIGHTS DIFFERING IN DURATION ON PROTEIN COMPOSITION OF COSMONAUTS BLOOD

Ye. V. Guseva and R. Yu. Tashpulatov *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 15-20 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 13-17

Avail: NTIS HC A07/MF A01

Adaptive changes in the protein composition of cosmonaut's blood detected after space flights of varying duration are examined. A short-term 2 day flight induced a decline of gamma-globulin (immunoglobulins G and A) and beta 2-glycoprotein fractions. Longer-term 16 and 18 day flights caused an increase in albumin and most globulin fractions. A long duration 49 day flight brought about an increase in the content of C sub 3c and C sub 4 factors of the complement and immunoglobulins G, A, and M. It is shown that return of the blood protein composition to normal after prolonged space flights takes a long period of time. J.M.S.

N80-19758# Joint Publications Research Service, Arlington, Va.

EFFECTS OF UNUSUAL SCHEDULES OF DAILY ACTIVITY AND SLEEP DEPRIVATION ON MAN'S FUNCTIONAL STATE AND WORK FITNESS

A. N. Litsov and I. F. Sarayev *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 21-29 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 17-23

Avail: NTIS HC A07/MF A01

Physiological functions, work capacity, and sleep characteristics of six healthy test subjects were studied for 30 days. The test subjects adhered to one of the three different regiments, (1) sleep from 2.00 a. m. to 10.00 a. m., (2) sleep from 6.00 p. m. to 2.00 a. m., and (3) sleep from 10.00 a. m. to 6.00 p. m. which were aggravated by 64 hr or 72 hr vigilance during the experiment. Demonstrated general and specific changes in physiological functions, work capacity and sleep are shown to be associated with how far work-rest cycles were shifted and how long they were applied. Prolonged vigilance caused similar changes in physiological functions, work capacity, and sleep. The test subjects showed very poor tolerance to an alteration in the work-rest cycle combined with sleep deprivation. J.M.S.

N80-19759# Joint Publications Research Service, Arlington, Va.

EFFECTS OF LONG-TERM SPACE FLIGHTS ON REACTIONS OF ADRENAL CORTEX AND MEDULLA

R. Kvetnyanski, R. A. Tigranyan, T. Torda, D. Repchekova, Ye. Yakhnova, and K. Murgash *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 30-35 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 24-27

Avail: NTIS HC A07/MF A01

Concentrations of corticosteron and catecholamines, and activities of catecholamine synthesizing enzymes, tyrosine hydroxylase, dopamine-beta-hydroxylase, and phenyl ethanol amine-N-methyl-transferase, were measured in the adrenals of rats flown for 19.5 days abroad the biosatellite Cosmos-782, synchronous and vivarium control animals sacrified on R + 0 and R + 26 days. The flown rats showed a moderate but significant increase in the adrenal weight, corticosteron concentration, and tyrosine hydroxylase activity on R + 0 day. These parameters returned to the normal on R + 26 day. These data give evidence that the adrenocortical and sympathoadrenal systems were not significantly stimulated by the space flight effects; therefore, weightlessness cannot be considered as a potent stressful agent. J.M.S.

N80-19760# Joint Publications Research Service, Arlington, Va.

CARDIOVASCULAR REACTION TO PERIODIC HEAD-PELVIS ACCELERATIONS ON A SHORT-ARM CENTRIFUGE

I. F. Vil-Vilyams and Ye. B. Shulzhenko *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 36-42 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 27-31

Avail: NTIS HC A07/MF A01

A result of 370 experiments in a 2 m-arm centrifuge, high human tolerance to acceleration of +0.8, 1.2, and 1.6 Gz (at the level of feet) was demonstrated. Cardiovascular reactions depended on the value, duration, and frequency of acceleration exposures. Cardiovascular responses included, primarily, changes in regional circulation of the legs. Author

REACTION OF HUMAN BLOOD TO CHRONIC EXPOSURE TO LOW DOSES OF CARBON MONOXIDE IN A CONFINED ENVIRONMENT

V. V. Zhuravlev, Z. M. Karelina, Ye. I. Nikitin, and V. P. Savina *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 43-48 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 43-48

Avail: NTIS HC A07/MF A01

The morphology, biochemistry, and acid-base equilibrium of blood of test subjects during chronic exposure to low doses of carbon monoxide in an enclosed environment was studied. R.E.S.

N80-19762# Joint Publications Research Service, Arlington, Va.

PROBABILITY OF ALTITUDE DECOMPRESSION DISORDERS WHEN BREATHING OXYGEN CONTAINING HUMAN WASTE GASES

A. V. Sedov, A. N. Mazin, and N. A. Surovtsev *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 49-53 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 36-39

Avail: NTIS HC A07/MF A01

The probability of altitude decompression disease in a hypobaric oxygen environment containing gaseous human wastes was explored. It was found that the development of the disease does not depend on the presence of wastes in the environment. Its frequency increases with exercises. The decrease of the barometric pressure to 308 mm Hg causes decompression disease only in the test subjects having traumatized limbs. The frequency of the disease during further decrease in the pressure down to 198 mm Hg increases substantially. R.E.S.

N80-19763# Joint Publications Research Service, Arlington, Va.

EFFECT OF HYPEROXIA ON OXYGEN TRANSPORT PROPERTIES OF BLOOD

L. A. Ivanov and N. D. Chebotarev *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 54-59 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med (Moscow), no. 1, 1980 p 39-42

Avail: NTIS HC A07/MF A01

In nine normal test subjects, aged 19-32, pO2, pCO2 and pH of arterial and venous blood were measured. The curve of oxyhemoglobin dissociation during 20 min inhalation of a 95% O2 containing mixture was analyzed. The studies demonstrate that during hyperoxia there is a shift to the left of the dissociation curve in native blood and standard curve (i.e., normalized to pH 7.4). This shift of the curve of oxyhemoglobin dissociation indicating an increase in hemoglobin affinity for oxygen seems to be one of the factors responsible for an increase in the pO2 arteriovenous difference and a much lower increment of venous pO2 than that of arterial pO2. Author

EXTERNAL RESPIRATION AND ACID-BASE BALANCE OF HUMAN BLOOD DURING LONG-TERM ANTIORTHOSTATIC HYPOKINESIA AND IN THE RECOVERY PERIOD

A. P. Golikov, V. Ye. Vorobyev, V. R. Abdrakhmanov, L. L. Stazhadze, V. V. Bogomolov, and S. C. Voronina *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 60-66 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 42-46

Avail: NTIS HC A07/MF A01

The external respiration and acid-base equilibrium of blood of 35 test subjects exposed to 49 day head-down (-4 deg) tilting and of 6 test subjects exposed to 182 day head-down (-4 deg) tilting was studied. The investigation found that a trend for a decrease in the respiration rate, lung ventilation, oxygen consumption occurred along with a relative increase in the exhalation time. With respect to the arterialized blood gases, a significant decrease in Pa sub O2, an increase in Pa sub CO2, and in the O2 alveolar-arterial difference were seen during the 49 day head-down tilting. During the 182 day head-down tilting a further increase in the CO2 arterio-alveolar difference was noted. These changes suggest shifts of the ventilation-perfusion ration in the lungs and, probably, disturbances of central regulation of respiration induced by head-down tilting. During the recovery period the above changes diminished gradually and disappeared by the 14th and 30th day after the 49 and 182 day head-down tilting, respectively. R.E.S.

N80-19765# Joint Publications Research Service, Arlington, Va.

DISTINCTIONS IN DEVELOPMENT OF PYROGENAL FEVER IN ANIMALS FOLLOWING PROLONGED HYPOKINESIA

P. V. Vasilyev, G. D. Glod, S. I. Sytnik, N. N. Uglova, and Y. P. Melnikova *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 67-72 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 46-50

Avail: NTIS HC A07/MF A01

Experiments on rabbits with pyrogenal fever and amidopyrine injection were conducted. It was found that 15 and 30 day exposure to hypokinesia produced changes in the reactivity of thermoregulating centers -- overexcitation and depletion. These changes were more distinct after 15 day hypokinesia. R.E.S.

EFFECTS OF 25 AND 50 MeV PROTONS ON HUMAN PERIPHERAL BLOOD LYMPHOCYTE CHROMOSONES IN VITRO

A. M. Totseva, N. I. Ryzhov, V. N. Garasimfnko, and Ye. Dermendzhiyev *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 80-87 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 54-60

Avail: NTIS HC A07/MF A01

The frequency and type of chromosomal abberations in human lymphocytes induced by 25, 50, 645 MeV protons and 200 kv X-rays were studied. It was shown that the yield of one-hit acentric fragments increased linearly and that of double-break aberrations increased exponentially with the irradiation dose. It was demonstrated that under the influence of radiations with high linear energy transfer the number of paired fragments increased and that of dicentrics and rings decreased. The test of total yield of chromosomal aberrations and their specific types helped to derive coefficients of relative biological effectiveness of the above irradiations. There was a quantitative correlation between the dose and yield of individual aberration types. R.C.T.

DYNAMICS OF STRESS REACTION OF RATS DURING EXPERIMENTAL HYPOKINESIA VARYING IN DURATION, AND POSSIBILITY OF CORRECTION THEREOF

L. Y. Kirichek *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 107-111 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 72-74

Avail: NTIS HC A07/MF A01

The dynamic intensity of the stress reaction in rats as a function of time of restriction of movement was surveyed. The time of maximum manifestation of stress was determined and the nature of change therein under the influence of some central neurotropic agents was demonstrated. R.C.T.

N80-19772# Joint Publications Research Service, Arlington, Va.

EFFECT OF BRIEF ANTIORTHOSTATIC HYPOKINESIA ON BLOOD IMMUNOGLOBULIN CONTENT

N. N. Mukhina, V. V. Chestukhin, V. Ye. Katlov, and A. P. Karpov *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75521) 5 Mar. 1980 p 112-115 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 74-75

Avail: NTIS HC A07/MF A01

Proteins were assayed with antibody activity in blood samples from different organs, and the effect on levels thereof of brief antiorthostatic (head-down) hypokinesia, which simulates the acute period of adaptation to weightlessness was tested. R.C.T.

N80-19773# Joint Publications Research Service, Arlington, Va.

RAT PLASMA AND TISSUE LIPIDS AFTER A LONG-TERM SPACE FLIGHT

J. Ahlers, R. A. Tigranyan, E. Ahlers, E. Paulikova, and M. Praslicka *In its* USSR Rept.: Space Biol. and Aerospace Med., V. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 116-119 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 76-78

Avail: NTIS HC A07/MF A01

Changes in the plasma and lipid metabolism of rats were studied one day after the rats had completed a flight aboard the Cosmos 782. The data were compared with the results of studies on animals involved in a ground based, synchronous experiment. Nonesterified fatty tissues were bioassayed. Results indicate there were changes in some parameters of lipid metabolism in rats such as signs of increased lipolysis in fatty tissue and increased mobilization of lipids. The changes in the spectrum of blood plasma and tissue lipids under the influence of prolonged weightlessness are discussed. A.W.H.

FUNCTIONAL CHANGES IN THE ADRENAL CORTEX DURING SIMULATION OF STRESS SITUATIONS IN THE PRESENCE OF HIGH CARBON MONOXIDE LEVELS

S. K. Kalandarov, V. P. Bychkov, and V. P. Savina *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, 1980 p 78-80 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 78-80

Avail: NTIS HC A07/MF A01

Experiments conducted in a pressure chamber to study the combined effects of a high concentration of carbon monoxide, high temperature, and humidty on the functional state of the human adrenal cortex during a prolonged period are described. The experiments were a simulation of a malfunction of the life support systems during space flight. The experimental period varied from one to ninety days. The effects of these conditions upon the potassium and sodium content of erythrocytes, the blood plasma, and the glucocorticoid and mineralocorticoid functions of the adrenal cortex are discussed. A.W.H.

STUDY OF RADIOPROTECTIVE EFFECT OF HIGH-INTENSITY MAGNETIC FIELDS ON MAMMALIAN CELL CULTURES
Z. Ya. Vnukova *In its* USSR Rept.: Space Biol. and Aerospace Med., v. 14, no. 1, (JPRS-75251) 5 Mar. 1980 p 130-133 refs Transl. into ENGLISH of Kosm. Biol. Aviakosmicheskaya Med. (Moscow), no. 1, 1980 p 83-84

Avail: NTIS HC A07/MF A01

The combined effects of ionizing radiation and stationary magnetic fields on fibroblasts cultured in medium 199 and in Eagle's medium with 10% bovine serum and antibiotics are discussed. The radiation effect was evaluated according to the rate of restoration of cell division, the level of chromosomal aberrations in the first postradiation mitosis, and the cell survival. The cells were exposed to radiation from a Cs-137 source. An improvement in hematological parameters and a higher animal survival rate with a certain combination of these factors is discussed. A.W.H.

A CONTINUUM MODEL OF PROTEIN TRANSPORT ACROSS THE ENDOTHELIUM IN THE LUNGS AND IN THE BODY OF HUMANS Ph.D. Thesis
James Paul Kohler 1979 433 p
Avail: Univ. Microfilms Order No. 8003517

A model of protein transport between two compartments of a multiphase, porous system is developed by volume averaging the species education of continuity over each of the two phases. The equation obtained by this method contains a mass transport parameter which represents the ratio of a complex function of diffusive and convective processes to a function of purely convective transport. The transport equation is used with experimental data obtained from a group of human subjects to model transport of the blood Beta globulin transferrin (MW = 76000, labeled with the radioisotopes In113) from the vascular to the interstitial compartment in the lung and to the extravascular compartment in the body as a whole. The experimental data are obtained from normal subjects and a heterogeneous group of patients by means of a noninvasive scintillation detection technique and blood sampling.

EFFECT OF HYPOKINESIA ON CARDIAC CONTRACTILE FUNCTION AND NERVOUS REGULATION OF THE HEART
F. Z. Meyerson, V. I. Kapelko, M. S. Gorina, A. N. Shchegolkov, and N. P. Larinov Feb. 1980 13 p refs Transl. into ENGLISH from Fiziol. Zh. SSSR. (USSR), no. 8, Aug. 1978 p 1138-1144 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-75970) Avail: NTIS HC A02/MF A01 CSCL 06P

Longterm hypokinesia caused cardiac deadaptation in rabbits, which resulted in the diminishing of the left ventricular rate of contraction and relaxation, joined later by decreased vascular resistance. As a results, the ejection rate as well as stroke volume and cardiac output were normal. The decrease of the relaxation speed was more obvious at a high heart rate and results in shortening of the diastolic pause and diminishing of cardiac output. Hearts of the hypokinetic animals were characterized by normal maximal pressure developed by a unit of muccardial mass aorta clamping, decreased adrenoreactivity, and increased cholinoreactivity. This complex of changes is contrary to changes observed in adaptation to exercise, but is similar to changes observed in compensatory hypertrophy of the heart.

METABOLISM DURING HYPODYNAMIA

I. V. Federov Feb. 1980 29 p refs Transl. into ENGLISH from Biol. Nauki (USSR), v. 15, no. 12, 1972 p 24-36 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-75996) Avail: NTIS HC A03/MF A01 CSCL 06S

Physical immobilization, inaction due to space travel, a sedentary occupation, or bed confinement due to a chronic illness elicit similar alternations in the metabolism of man and animals (rat, rabbit, dog, mouse). After a preliminary period of weight loss, there is eventually weight gain due to increased lipid storage. Protein catabolism is enhanced and anabolism depressed, with elevated urinary excretion of amino acids, creatine, and ammonia. Glycogen stores are depleted and glyconeogenesis is accelerated. Polyuria develops with subsequent redistribution of body fluids in which the blood volume of the systemic circulation is decreased and that of pulmonary circulation increased. This results in depressed production of vasopressin by the posterior pituitary which further enhances urinary water and salt loss. Author

BLOOD CIRCULATION UNDER CONDITIONS OF WEIGHTLESSNESS

I. I. Kastyan and V. I. Kopanev Mar. 1980 25 p refs Transl. into ENGLISH from Izv. Akad. Nauk SSSR, Seriya Biol. (USSR), no. 3, 1964 p 352-368 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-76036) Avail: NTIS HC A02/MF A01 CSCL 06S

Experimental materials and published data on the problem of blood circulation in man and animals under conditions of short and long term weightlessness are summarized. The data obtained allow the conclusion, that when humans spent 5 days in a weightless state their blood circulation was not essentially distributed. Some features of the functioning of the cardiovascular system are pointed out: delay of adaptation rate, increase in lability, etc. There is a discussion of the physiological mechanisms for the direct and indirect effect of weightlessness. The direct effect comprise the complex of reactions caused by the significant fall in hydrostatic pressure and the indirect embraces all the reactions arising in the organism resulting from disturbance of the systematic character of the analyzers that take part in the analysis of space realtions and the body's orientation in space. R.E.S.

CERTAIN QUESTIONS OF THE ACCLIMATIZATION OF CONSTRUCTION WORKERS TO THE CONDITIONS OF A SUBTROPICAL CLIMATE

A. Babayev Sep. 1979 11 p refs Transl. into ENGLISH from Gig. Sanit. (USSR), no. 6, 1978 p 106-108 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(Contract NASw-3199)
(NASA-TM-75728) Avail: NTIS HC A02/MF A01 CSCL 06P

The period of active acclimatization was determined for construction workers coming into a subtropical climate. Changes were observed in metabolic processes, oxygen needs, pulse rate, arterial pressure, body and skin temperature, body weight, water consumption and loss, and the comfort zone of heat sensitivity. It was concluded that acclimatization is facilitated if introduction to the hot climate occurs in the mild cool season, rather than the summer. This also prevents heat prostration and improves the development of adaptive mechanisms. Author

SPATIAL FILTERING AND MECHANISMS OF PERCEPTION

Arthur P. Ginsburg Apr. 1979 9 p refs Presented at the Conf. on Modeling and Simulation, Pittsburgh, 25-27 Apr. 1979
(AF Proj. 2313)
(AD-A077622; AMRL-TR-79-47) Avail: NTIS HC A02/MF A01 CSCL 14/5

Attempts have been made to distinguish between visual mechanisms as being space domain feature detectors or transform domain spatial frequency detectors. Those descriptions can be considered equivalent in terms of producing similar filtered images. However, Fourier-like transformation appears to be a more accurate description of the filtering process when biological data is considered. The two-dimensional discrete Fourier transform is a process that requires the input object to be multiplied by a bank of even symmetric cosinusoidal and odd symmetric sinusoidal space functions having periodicity. The periodicity corresponds to the number of cycles per receptive field width. The weighting function of the periodicity is alternating positive and negative values. These properties were related to the properties of cortical receptive fields. Certain receptive fields may functionally perform a generalized periodic analysis for spatial vision. Since these functions are two-dimensional, they are sensitive to orientation, similar to cortical receptive fields. Therefore, it was argued that the visual system contains mechanisms that can process spatial information consistent with the mathematical process of a two-dimensional discrete Fourier-like transform. This analysis of the filtering process of certain visual cortical mechanisms may lead to further understanding into visual perception. GRA

THE THOUSAND AVIATOR STUDY: 1969 - 1971 FOLLOW-UP PROGRAM WITH DISTRIBUTIONS AND INTERCORRELATIONS OF SELECTED VARIABLES

Neil R. MacIntyre, Albert Oberman, William Harlan, Robert E. Mitchell, and Ashton Graybiel Apr. 1979 232 p refs
(AF51524005)
(AD-A079700; NAMRL-MONOGRAPH-24) Avail: NTIS HC A11/MF A01 CSCL 01/2

The 1969-1971 evaluation of the U.S. Navy's 'Thousand Aviator' program was the fourth such follow-up examination since the study's inception in 1940. During this evaluation, follow-up status was determined in 995 of the original 1056 subjects (94.2%). In addition, the largest amount of physiologic, psychologic, and other medical data collected to date in the program was obtained on the 675 subjects tested in Pensacola, Florida. As with previous evaluations of the group, a summary of the methodologies employed and an overall view of distributions and interrelationships seemed necessary for a continued understanding of the program and its findings. This report describes in detail the methodology as well as the distributions and intercorrelations of 80 selected variables. Data are presented in the form of descriptive statistics, frequency histograms, and Pearson correlation coefficients. Comments deal exclusively with statistical considerations, and no interpretations are attempted. Author (GRA)

EFFECT OF FIELD OF VIEW AND MONOCULAR VIEWING ON ANGULAR SIZE JUDGEMENTS IN AN OUTDOOR SCENE
Edward A. Denz (San Jose State Univ., Calif.), Everett A. Palmer, and Stephen R. Ellis Feb. 1980 20 p refs
(Grant NsG-2269)
(NASA-TM-81176; A-8083) Avail: NTIS HC A02/MF A01 CSCL 05I

Observers typically overestimate the angular size of distant objects. Significantly, overestimations are greater in outdoor settings than in aircraft visual-scene simulators. The effect of field of view and monocular and binocular viewing conditions on angular size estimation in an outdoor field was examined. Subjects adjusted the size of a variable triangle to match the angular size of a standard triangle set at three greater distances. Goggles were used to vary the field of view from 11.5 deg to 90 deg for both monocular and binocular viewing. In addition, an unrestricted monocular and binocular viewing condition was used. It is concluded that neither restricted fields of view similar to those present in visual simulators nor the restriction of monocular viewing causes a significant loss in depth perception in outdoor settings. Thus, neither factor should significantly affect the depth realism of visual simulators. Author

LEARNING BY UNDERSTANDING ANALOGIES
Patrick H. Winston Jun. 1979 90 p refs
(Contracts N00014-75-C-0643; N00014-77-C-0389)
(AD-A078123; AI-M-520) Avail: NTIS HC A05/MF A01 CSCL 06/4

We use analogy when we say something is a Cinderella story and when we learn about resistors by thinking about water pipes. Experts use analogy when they learn Economics, Medicine, and Law. This paper presents a theory of analogy and describes an implemented system that embodies the theory. The specific competence to be understood is that of using analogies to deal with an unfamiliar situation. A teacher may supply the analogy or may not. The analogy may be between situations in a single domain or between situations in very different domains. Frames represent the situations. Relations are expressed in a way that is reminiscent of the case-grammar view of simple sentences. The essential computations tie pairs of frame-described situations together and make knowledge about one become knowledge about the other. GRA

PROJECT FIRES - FIREFIGHTERS INTEGRATED RESPONSE EQUIPMENT SYSTEM. VOLUME 1: PROGRAM OVERVIEW AND SUMMARY, PHASE 1A Final Report
Fred Abeles, Arnold Bruno, Robert Delvecchio, and Victor Himel Dec. 1978 48 p
(Contract NAS8-32329)
(NASA-CR-161399; PB-299050/5) Avail: NTIS HC A03/MF A01 CSCL 06Q

Current firefighters protective equipment was tested and evaluated against the protective ensemble performance standards (PEPS) requirements. A technology demonstration ensemble (TDE) was fabricated to demonstrate how the use of advanced equipment and technology could satisfy, to the fullest extent possible, the protective needs of the firefighter described by the PEPS. The TDE utilizes innovative approaches, advanced materials and equipment, and systems integration technology. Using the results of the test program and the PEPS document, a preliminary design of a prototype protective ensemble was performed. This design features materials and components that are available now and would offer increased firefighter protection in the near future. Author

DEVELOPMENT OF A NITROGEN GENERATION SYSTEM Final Report

D. B. Heppner, R. D. Marshall, J. D. Powell, III, and F. H. Schubert Jan. 1980 63 p refs
(Contract NAS2-10096)
(NASA-CR-152333; LSI-TR-353-4) Avail: NTIS HC A04/MF A01 CSCL 06K

An eight-stage nitrogen generation module was developed. The design integrated a hydrazine catalytic dissociator, three ammonia dissociation stages and four palladium/silver hydrogen separator stages. Alternating ammonia dissociation and hydrogen separation stages are used to remove hydrogen and ammonia formed in the dissociation of hydrazine which results in negligible ammonia and hydrogen concentrations in the product nitrogen stream. An engineering breadboard nitrogen supply subsystem was also developed. It was developed as an integratable subsystem for a central spacecraft air revitalization system. The subsystem consists of the hydrazine storage and feed mechanism, the nitrogen generation module, the peripheral mechanical and electrical components required to control and monitor subsystem performance, and the instrumentation required to interface with other subsystems of an air revitalization system. The breadboard nitrogen supply subsystem was integrated and tested with a one-person capacity experimental air revitalization system. The integration, checkout and testing was successfully accomplished. R.E.S.

HUMAN COMFORT RESPONSE TO RANDOM MOTIONS WITH COMBINED YAWING AND ROLLING MOTIONS

Ralph W. Stone, Jr. Aug. 1979 129 p refs
(Contract NAS1-14908)
(NASA-CR-159187; UVA/528156/MAE-CE79/128) Avail: NTIS HC A07/MF A01 CSCL 05H

The effects of random yawing and rolling velocities on passenger ride comfort responses were examined on a visual motion simulator. The effects of power spectral density shape and frequency ranges of peak power from 0 to 2 Hz were studied. The subjective rating data and the physical motion data obtained are presented. No attempt at interpretation or detailed analysis of the data is made. There existed during this study motions in all other degrees of freedom as well as the yawing and rolling motions, because of the characteristics of the simulator. These unwanted motions may have introduced some interactive effects on passenger responses which should be considered in any analysis of the data. R.E.S.

HELICOPTER PILOT DETECTION OF THE TWO DIFFERENT CAMOUFLAGED HAWK BATTERIES

Charles C. Jorgensen and Nadean R. Jones Jul. 1978 10 p refs
(AD-A077954; ARI-RM-78-5) Avail: NTIS HC A02/MF A01 CSCL 15/7

The purpose of this study was to collect data comparing the camouflage effectiveness of the cage-supported light-weight camouflage screen (LCS) and the experimental shape disrupter system produced by the Mobility Equipment Research and Development Command (MERADCOM). The camouflaged Hawk battery systems were contrasted with a control Hawk battery having no camouflage. The data reported in this paper were collected by ARI for use by the US Army Air Defense Board (ADB) as part of a larger scale study for the US Army Air Defense School (USAADS). ARI was specifically tasked with determining the human pilot detectability of the batteries in contrast to other portions of the study dealing with satellite and photoimagery interpretations. The data presented refer only to helicopter pilots and the associated Hawk ground crews. The data that were collected appear to consistently support one camouflage system over the other. GRA

TOWARD A REMOTELY-MANNED ENERGY AND PRODUCTION ECONOMY

Marvin Minsky Sep. 1979 20 p
(Contract N00014-79-C-0260)
(AD-A078069; AI-M-544) Avail: NTIS HC A02/MF A01 CSCL 05/8

We can solve many problems of energy, health, productivity, and environmental quality by improving the technology of remote control. This will produce nuclear safety and security, advances in mining, increases in productivity, economies in transportation, new industries and markets. By creating 'mechanical hands' that are versatile and economical enough, we shape a new world of health, energy and security. It will take 10 to 20 years, and cost about a billion dollars. GRA

EFFECTS OF ARTILLERY NOISE ON THE HEARING OF PROTECTED CREW PERSONNEL Final Report, May - Jun. 1979

David C. Hodge, G. Richard Price, Nancy L. Dukes, and Samuel J. Murff Oct. 1979 40 p refs
(DA Proj. 1L1-61102-B-74A)
(AD-A078664; HEL-TM-17-79) Avail: NTIS HC A03/MF A01 CSCL 06/19

A test was conducted to determine loading rates for three artillery systems, and both male and female crews participated. Audiometric and acoustical support were provided to assess the crews: noise exposure, look for trends in the threshold shift data, and compare the threshold shifts with that permitted under present damage risk criteria. The impulse noise exposures were quite variable, due to crew mobility and low zone charges. There were no instances of excessive threshold shift, and only a few instances of threshold shift approaching the allowable limits. There were no obvious trends across test conditions. The main auditory goal of the test, viz., to avoid excessive hearing losses, was achieved. GRA

LIGHTWEIGHT PILOT HELMETS: THE ISSUE OF WEIGHT VERSUS PROTECTION M.S. Thesis Final Report

Richard W. Himmel 8 Jun. 1979 63 p refs
(AD-A076325) Avail: NTIS HC A04/MF A01 CSCL 06/17

This study addresses the problem of reducing the weight of pilot helmets while retaining relevant protective qualities. Existing helmet development standards are synthesized and compared in light of compatability, objectivity and standardization. The issue of decreased protection, as a result of weight reduction, is discussed in view of pilot opinion, accident experience, contemporary research and recent compromises in helmet development. The investigation reveals distinct ambiguities in helmet development standards and incongruities between standards. The study recommends the deletion of penetration standards since they are incompatible with impact standards and prevent industry from using new materials to achieve light weight. Further, the study proposes a change to military specification MIL-H-83147 (USAF) that reflects the deletion of penetration standards and recognizes current technological developments. GRA

HUMAN WORK MEASUREMENT. A BIBLIOGRAPHY WITH ABSTRACTS Progress Report, 1964 - Nov. 1979

Edith Kenton Dec. 1979 218 p Supersedes NTIS/PS-78/1197, NTIS/PS-77/1054; NTIS/PS-76/0945; NTIS/PS-75/797
(PB80-803166; NTIS/PS-78/1197; NTIS/PS-77/1054; NTIS/PS-76/0945; NTIS/PS-75/797) Avail: NTIS HC $30.00/MF $30.00 CSCL 05I

Reports dealing with measurement techniques of human work at jobs and tasks are summarized. Specific topics included are work, analysis and evaluation, workload management, operations analysis, task complexity, and performance measurement. This updated bibliography contains 211 abstracts, 43 of which are new entries to the previous edition. GRA

GENERAL METHODS TO ENABLE ROBOTS WITH VISION TO ACQUIRE, ORIENT AND TRANSPORT WORKPIECES Technical Report 5

J. Birk, R. Kelley, and T. Brownell Aug. 1979 245 p refs
(Grants NSF APR-74-13935; Grants NSF DAR-14-13935)
(PB80-106388; NSF/RA-790230; TR-5) Avail: NTIS HC A11/MF A01 CSCL 13I

The problem of giving robots the ability to work with unoriented objects is discussed in relation to automated batch manufacturing systems, particularly those in which unoriented parts in containers are transported between machines and storage. Some examples of robot systems are an automatic method of visually estimating the pose of an object held in a robot hand and a system employing vision which feeds workpieces directly from supply bins into machines and which can be reprogrammed to service different workpieces. REPRESENTING HUMAN THOUGHT AND RESPONSE IN MILITARY CONFLICT SIMULATION MODELS

Dennis K. Leedom *In* AGARD Modeling and Simulation of Avionics Systems and Command, Control and Commun. Jan. 1980 15 p refs
Avail: NTIS HC A24/MF A01

Conflict simulation models and the representation of human thought and response in such models are considered. The ideas presented relate to the modeling of conflict situations from single combat unit level up through theater force level. In particular, the use of such models for assessing the utility of tactical command and control (C2) systems is emphasized. J.M.S.

AVIATION TRAINING USING VIDEO DISK TECHNOLOGY

Craig Fields and Steven Levin *In* AGARD Modeling and Simulation of Avionics Systems and Command, Control and Commun. Jan. 1980 2 p Prepared in cooperation with Interactive Television Co., Arlington, Va.

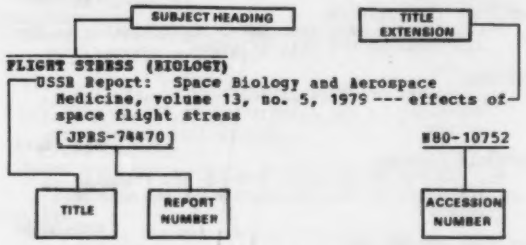
Avail: NTIS HC A24/MF A01

Video disks are a new technology that provide inexpensive storage (65 cent/disk) and rapid access (as little as 1/8 sec.) to large numbers (54,000 pictures/disk side) of photographs. For a typical airport, it is possible to store on a video disk compressed movies showing all runway, take-off, landing, circling, and approach paths. When such a disk is viewed on a player and television controlled by a simple microprocessor, the pilot can vicariously fly himself around an airport, land, take-off, taxi and circle. The pilot sees an image with photographic realism, can choose his own path and speed, and can choose time of day or weather conditions for the simulation trip. Such a system is one hundred times less expensive than a conventional flight simulator. Author

SUBJECT INDEX

AEROSPACE MEDICINE AND BIOLOGY / *A Continuing Bibliography (Suppl. 207)* **JUNE 1980**

Typical Subject Index Listing



SUBJECT HEADING
TITLE EXTENSION
FLIGHT STRESS (BIOLOGY)
USSR Report: Space Biology and Aerospace Medicine, volume 13, no. 5, 1979 --- effects of space flight stress
[JPRS-74470]
N80-10752
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

Chemical evolution and the origin of life - Bibliography supplement 1977
A80-26220

CHROMOSOMES
Effects of 25 and 50 MeV protons on human peripheral blood lymphocyte chromosomes in vitro
N80-19767

CIRCADIAN RHYTHMS
Circadian rhythmicity in ventricular myocardial and diaphragmatic metabolism
N80-18695

CLINICAL MEDICINE
Aviation medicine. Volume 2 - Health and clinical aspects --- Book
A80-27029

CLOSED ECOLOGICAL SYSTEMS
Development of program for the control of the autotrophic component of an ecological system that is closed with regard to exchange of gases
N80-19768

COGNITIVE PSYCHOLOGY
The power process: A synthesis theory of power
N80-18715

COLOR
The influence of colour and contour rivalry on the magnitude of the tilt illusion
A80-28787

COLOR VISION
Spatial summation of monochromatic light in the visual system
A80-25828
Thresholds of recognition of various features of color stimuli
A80-25829
Visual search through color displays - Effects of target-background similarity and background uniformity
A80-28101
Electroretinographic and psychophysical measures of cone spectral mechanisms using the two-color threshold technique
A80-28786

COMFORT
Human comfort response to random motions with combined yawing and rolling motions
[NASA-CR-159187] N80-19802

COMMAND AND CONTROL
Representing human thought and response in military conflict simulation models
N80-19813

COMPUTERIZED SIMULATION
Modeling requirements for network simulation of human-machine systems
N80-18717
Representing human thought and response in military conflict simulation models
N80-19813

CONCENTRATION (COMPOSITION)
Effects of flights differing in duration on protein composition of cosmonauts blood
N80-19757

CONDENSATION
Self-condensation of activated dinucleotides on polynucleotide templates with alternating sequences
A80-25202

CONGENITAL ANOMALIES
Mitral valve prolapse - A review
A80-25897

CONTINUUM MECHANICS
A continuum model of protein transport across the endothelium in the lungs and in the body of humans
N80-19778

CONTOURS
The influence of colour and contour rivalry on the magnitude of the tilt illusion
A80-28787

CORONARY ARTERY DISEASE
Detection of coronary artery disease - Comparison of exercise stress radionuclide angiocardiography and thallium stress perfusion scanning
A80-25822
Mitral valve prolapse - A review
A80-25897

COSMOS 936 SATELLITE
Study of physiological effects of weightlessness and artificial gravity in the flight of the biosatellite Cosmos-936
A80-25283

CROP GROWTH
Determination of ethylene produced by pea seedlings under near-zero gravity conditions - Preliminary studies
[AAS 79-216] A80-28707

CULTURE TECHNIQUES
NASA standard procedures for the microbiological examination of space hardware
[NASA-TM-80756] N80-19749

CYTOLOGY
The role of Na/+/ in transport processes of bacterial membranes
A80-27077

D

DECOMPRESSION SICKNESS
Investigation of the functional state of the CNS under conditions of altitude decompression
A80-25836

Probability of altitude decompression disorders when breathing oxygen containing human waste gases N80-19762

DIAGNOSIS
Application of mutual amount of information for time delay estimation --- its use in the diagnosis of epilepsy [THT-210] N80-18714

DIAPHRAGM (ANATOMY)
Circadian rhythmicity in ventricular myocardial and diaphragmatic metabolism N80-18695

DIETS
Alimentary hypokinesia [NASA-TM-75989] N80-19784

DIFFUSION
A continuum model of protein transport across the endothelium in the lungs and in the body of humans N80-19778

DIGESTIVE SYSTEM
Alimentary hypokinesia [NASA-TM-75989] N80-19784

DISPLACEMENT
Illusory reversal of extrafoveally perceived displacement A80-28775

DISPLAY DEVICES
Visual search through color displays - Effects of target-background similarity and background uniformity A80-28101

DOPPLER EFFECT
Ultrasonic Doppler directional blood flow velocity meter [RAE-LIB-TRANS-1918] N80-19780

E

EAR PROTECTORS
Effects of artillery noise on the hearing of protected crew personnel [AD-A078664] N80-19805

EATING
Effects of fasting and refeeding on the metabolic response to a standard meal in man A80-25175

ECHOCARDIOGRAPHY
Echocardiography in assessing acute pulmonary hypertension due to pulmonary embolism A80-25823
The prolapsed mitral valve syndrome and the flyer A80-25898
Echocardiographic left ventricular masses in distance runners and weight lifters A80-25991

ECOLOGY
The carbon isotope biogeochemistry of the individual hydrocarbons in bat guano and the ecology of insectivorous bats in the region of Carlsbad, New Mexico [NASA-TM-81164] N80-18680

ECONOMIC ANALYSIS
Shuttle payload, manual vs. automated functions [AAS 79-210] A80-28700

EFFERENT NERVOUS SYSTEMS
The effects of stimulation of the anterior cingulate gyrus in cats with freedom of movement [NASA-TM-76055] N80-18688
Topochemical differences in the amount of RNA in the motoneurons of the spinal chord in hypoxia and hypokinesia [NASA-TM-75994] N80-18689

EJECTION SEATS
Studies of limb-dislodging forces acting on an ejection seat occupant A80-25895

ELECTROCONDUCTIVITY
Spectral analysis of conduction fluctuations of calcium channels in a nerve-cell membrane A80-26424

ELECTROLYTE METABOLISM
Experimental investigation of the role of thyrocalcitonin in the prophylaxis of disturbances in the water-salt and mineral metabolism during a 30-day hypokinesia [NASA-TM-75938] N80-18704

ELECTROPHORESIS
Kidney cell electrophoresis [NASA-CR-160555] N80-19782

ELECTROPHYSIOLOGY
The effects of stimulation of the anterior cingulate gyrus in cats with freedom of movement [NASA-TM-76055] N80-18688

ELECTRORETINOGRAPHY
Electroretinographic and psychophysical measures of cone spectral mechanisms using the two-color threshold technique A80-28786

EMBOLISMS
Echocardiography in assessing acute pulmonary hypertension due to pulmonary embolism A80-25823

EMERGENCY LIFE SUSTAINING SYSTEMS
Prototype: Preliminary study on emergency breathing apparatus [FOA-C-40103-C2] N80-18720

ENDOCRINE SYSTEMS
Fluid shifts and endocrine responses during chair rest and water immersion in man A80-25990

ENDOTHELIUM
A continuum model of protein transport across the endothelium in the lungs and in the body of humans N80-19778

ENZYME ACTIVITY
The effect of SQ-20881, an inhibitor of carboxycathepsin /angiotensin of 1-transforming enzyme/ on the peripheral blood circulation during the early postresuscitation period A80-26425

ENZYMOLOGY
Effect of the enzymatic inhibitor of Kunitz on the gastric lesions from reserpine, from phenylbutazone, from pyloric ligation and by restraint in the rat [NASA-TM-76027] N80-18681
Effect of restricted motion in high temperature on enzymatic activity of the pancreas [NASA-TM-76063] N80-18683

EPILEPSY
Application of mutual amount of information for time delay estimation --- its use in the diagnosis of epilepsy [THT-210] N80-18714

ERYTHROCYTES
Studies of the effects of stationary magnetic fields on rat erythron N80-19777

ETHYLENE
Determination of ethylene produced by pea seedlings under near-zero gravity conditions - Preliminary studies [AAS 79-216] A80-28707

EVOKED RESPONSE (PSYCHOPHYSIOLOGY)
Continuous real-time auditory evoked potentials using a sliding window of averages N80-18699

EXOBIOLOGY
USSR report: Space biology and aerospace medicine, v. 14, no. 1 [JPRS-75251] N80-19755

EXPLOSIONS
Effects of artillery noise on the hearing of protected crew personnel [AD-A078664] N80-19805

EXTRATERRESTRIAL LIFE
Some final conclusions and supporting experiments related to the search for organic compounds on the surface of Mars A80-26390

EYE (ANATOMY)
Intra-ocular pressure normalization technique and equipment [NASA-CASE-LEW-12723-1] N80-18690

EYE MOVEMENTS
Contact ring for registering the turning of the eyeball A80-25839

F

F-15 AIRCRAFT
A new anti-G value for high-performance aircraft [AD-A076904] N80-18719

FATIGUE (BIOLOGY)
Peripheral fatigue under local static work of varying intensity A80-25833

Functional stability of the trained organism under prolonged uniform loads in standard conditions
A80-25834

FEEDBACK CONTROL
On the structural and kinematic synthesis of open-loop manipulators. I - Basic structural and kinematic procedures
A80-26335
The human body temperature regulation system --- closed control loop
[RAE-LIB-TRANS-2019] N80-18702
Biofeedback. A bibliography with abstracts
[PB80-803117] N80-19790

FEVER
Distinctions in development of pyrogenal fever in animals following prolonged hypokinesia
N80-19765

FIBROBLASTS
Study of radioprotective effect of high-intensity magnetic fields on mammalian cell cultures
N80-19776

FIRE FIGHTING
Project FIRES - Firefighters Integrated Response Equipment System. Volume 1: Program overview and summary, phase 1A
[NASA-CR-161399] N80-19795
Project FIRES - Firefighters Integrated Response Equipment System. Volume 2: Protective ensemble performance standards goals for firefighter protection, phase 1A
[NASA-CR-161400] N80-19796
Project FIRES - Firefighters Integrated Response Equipment System. Volume 3: Test and evaluation report, phase 1A
[NASA-CR-161401] N80-19797
Project FIRES - Firefighters Integrated Response Equipment System. Volume 4: Technology demonstration ensemble, phase 1A
[NASA-CR-161402] N80-19798
Project FIRES - Firefighters Integrated Response Equipment System. Volume 5: Prototype protective ensemble data package, phase 1A
[NASA-CR-161403] N80-19799

FLIGHT CLOTHING
Lightweight pilot helmets: The issue of weight versus protection
[AD-A076325] N80-19806

FLIGHT CREWS
Suggestions for the contents of the Aviation Board survival kit
[FOA-A-59004-H3(E9)] N80-18721
Evaluation and forecasting of mental fitness of flight personnel in the presence of neurosis
N80-19770
Human work measurement. A bibliography with abstracts
[PB80-803166] N80-19807

FLIGHT HAZARDS
Aviation medicine. Volume 2 - Health and clinical aspects --- Book
A80-27029

FLIGHT SIMULATION
Effect of cursor characteristics on pilots' tracking performance on a cathode-ray tube in dynamic simulation
A80-28556

FLIGHT TRAINING
Aviation training using video disk technology
N80-19828

FLOW MEASUREMENT
Investigation of flow rates of oxygen systems used in general aviation
A80-25899

FLOW VELOCITY
Investigation of flow rates of oxygen systems used in general aviation
A80-25899
Ultrasonic Doppler directional blood flow velocity meter
[RAE-LIB-TRANS-1918] N80-19780

FOOD INTAKE
Effects of fasting and refeeding on the metabolic response to a standard meal in man
A80-25175

FOVEA
Spatial summation of monochromatic light in the visual system
A80-25828
Illusory reversal of extrafoveally perceived displacement
A80-28775

G

GAS EXCHANGE
Viking gas exchange reaction - Simulation on UV-irradiated manganese dioxide substrate
A80-26391
Development of program for the control of the autotrophic component of an ecological system that is closed with regard to exchange of gases
N80-19768

GENETIC CODE
Early assignments of the genetic code dependent upon protein structure
A80-26214

GLYCEROLS
Cyanamide mediated synthesis under plausible primitive earth conditions. VI - The synthesis of glycerol and glycerophosphates
A80-25201

GLYCINE
Oligo-glycine synthesis in an aqueous solution of glycine under oxidative conditions --- prebiotic
A80-26218

GONADS
Effects of centrifugation stress on pituitary-gonadal function in male rats
A80-25987

GRAVITATIONAL EFFECTS
Determination of ethylene produced by pea seedlings under near-zero gravity conditions - Preliminary studies
[AAS 79-216] A80-28707

GUIDANCE (MOTION)
On the structural and kinematic synthesis of open-loop manipulators. I - Basic structural and kinematic procedures
A80-26335

H

HABITABILITY
STS mission duration enhancement study: (orbiter habitability)
[NASA-CR-160535] N80-18718

HABITUATION (LEARNING)
Effect of habituation on the susceptibility of the rat to restraint ulcers
[NASA-TM-76072] N80-19748

HALOCARBONS
Spectrophotometric identification of the pigment associated with light-driven primary sodium translocation in Halobacterium halobium
A80-26015

HAWK MISSILE
Helicopter pilot detection of the two different camouflaged hawk batteries
[AD-A077954] N80-19803

HEARING
The effects of spectral density and stimulus intensity on the elicitation of the acoustic reflex
N80-18692
Effects of artillery noise on the hearing of protected crew personnel
[AD-A078664] N80-19805

HEART
Features of cholinergic cardia regulation under conditions of hypokinesia
[NASA-TM-76044] N80-18687
Effect of hypokinesia on contractile function of cardiac muscle
[NASA-TM-76061] N80-18708

HEART DISEASES
Detection of coronary artery disease - Comparison of exercise stress radionuclide angiocardiography and thallium stress perfusion scanning
A80-25822
Echocardiography in assessing acute pulmonary hypertension due to pulmonary embolism
A80-25823

Nuclear cardiology. I - Radionuclide angiographic assessment of left ventricular contraction: Uses, limitations and future directions. II - The role of myocardial perfusion imaging using thallium-201 in diagnosis of coronary heart disease
A80-25824

HEART FUNCTION
The prolapsed mitral valve syndrome and the flyer
A80-25898

HEART RATE
Evaluation of the relationship between motion sickness symptomatology and blood pressure, heart rate, and body temperature
A80-25890
Effect of hypokinesia on cardiac contractile function and nervous regulation of the heart
[NASA-TM-75970] N80-19783

HEART VALVES
Mitral valve prolapse - A review
A80-25897
The prolapsed mitral valve syndrome and the flyer
A80-25898

HEAT ACCLIMATIZATION
Physiologic reactions during five weeks of continuous residence in an artificial humid and hot climate
[NASA-TM-75356] N80-18707

HELMETS
Lightweight pilot helmets: The issue of weight versus protection
[AD-A076325] N80-19806

HEMODYNAMIC RESPONSES
Cardiovascular reaction to periodic head-pelvis accelerations on a short-arm centrifuge
N80-19760

HEMODYNAMICS
Dynamics of erythrocyte count, hemoglobin, and catalase activity in rat blood in hypokinesia, muscular activity and restoration
[NASA-TM-76058] N80-19752

HEMOLYSIS
Intravascular hemolysis in acute mountain sickness
A80-25896

HEMOSTATICS
The effects of adrenalectomy and corticsteroid injection on the fibrinolytic activity of complex heparin compounds in the blood during immobilization
[NASA-TM-75985] N80-18685

HIGH ALTITUDE BREATHING
Vital capacity, exercise performance, and blood gases at altitude as related to age
A80-25988
Chronic propranolol treatment blunts right ventricular hypertrophy in rats at high altitude
A80-28187
Methods for identifying respiratory oscillations disclose altitude effects
A80-28190

HIGH ALTITUDE ENVIRONMENTS
Comparison of physiological responses to hypoxia at high altitudes between highlanders and lowlanders
A80-25763
Body fluid compartments in humans during acute high-altitude exposure
A80-25893
Intravascular hemolysis in acute mountain sickness
A80-25896

HIGH ALTITUDE TESTS
The effect of vasoactive agents on the resistance and capacitance vessels of the small intestine at high altitude
A80-26029

HOMEOSTASIS
Functional stability of the trained organism under prolonged uniform loads in standard conditions
A80-25834
Certain questions of the acclimatization of construction workers to the conditions of a subtropical climate
[NASA-TM-75728] N80-19787

HORMONE METABOLISMS
Effect of consecutive cooling and immobilization on catecholamine metabolism in rat tissues
[NASA-TM-75962] N80-18684

HORMONES
Effects of centrifugation stress on pituitary-gonadal function in male rats
A80-25987
The effects of adrenalectomy and corticsteroid injection on the fibrinolytic activity of complex heparin compounds in the blood during immobilization
[NASA-TM-75985] N80-18685
Experimental investigation of the role of thyrocalcitonin in the prophylaxis of disturbances in the water-salt and mineral metabolism during a 30-day hypokinesia
[NASA-TM-75938] N80-18704
Hormone supply of the organism in prolonged emotional stress
[NASA-TM-76046] N80-18706
Effectiveness of using thyrocalcitonin for the prevention of a calcium metabolic disorder in the mineralized tissues of rabbits with 30 days hypokinesia
[NASA-TM-75987] N80-19751

HUMAN BEHAVIOR
The power process: A synthesis theory of power
N80-18715

HUMAN BEINGS
Effects of fasting and refeeding on the metabolic response to a standard meal in man
A80-25175
Contact ring for registering the turning of the eyeball
A80-25839
Models of human vision in digital image bandwidth compression
N80-18697

HUMAN BODY
Studies of limb-dislodging forces acting on an ejection seat occupant
A80-25895
The human body temperature regulation system --- closed control loop
[BAE-LIB-TRANS-2019] N80-18702

HUMAN FACTORS ENGINEERING
A method of determination of scale numbering taking into account the carrying capacity of an operator
A80-27065
A dual task investigation of pilots' skill level
A80-28554
Shuttle payload, manual vs. automated functions
[AAS 79-210] A80-28700
A new anti-G valve for high-performance aircraft
[AD-A076904] N80-18719
Spatial filtering and mechanisms of perception
[AD-A077622] N80-19788
Stress factors on pilot performance. A bibliography with abstracts
[PB80-803075] N80-19794
Human comfort response to random motions with combined yawing and rolling motions
[NASA-CR-159187] N80-19802
Representing human thought and response in military conflict simulation models
N80-19813

HUMAN PATHOLOGY
Some aspects of the organization of nocturnal sleep in normal and pathological states
A80-25837

HUMAN PERFORMANCE
Individual peculiarities of the space-time organization of the bioelectric activity of the brain in a probalilistic prediction situation
A80-25838
Modeling requirements for network simulation of human-machine systems
N80-18717
Helicopter pilot detection of the two different camouflaged hawk batteries
[AD-A077954] N80-19803

HUMAN REACTIONS
Ventilatory control during exercise with increased external dead space
A80-25725
Concerning some mechanisms of visual recognition
A80-25826
Neurophysiological mechanisms of filtering in the visual system
A80-25827

Thresholds of recognition of various features of color stimuli
A80-25829

The dependence of thresholds of detection of moving single bands of light on their spectrum and speed
A80-25830

Audiokinesthetic relationships and the time of simple motor response to auditory and kinesthetic stimuli
A80-25831

Investigation of the self-regulation of sensorimotor activity
A80-25832

Peripheral fatigue under local static work of varying intensity
A80-25833

Investigation of the functional state of the CNS under conditions of altitude decompression
A80-25836

HUMAN TOLERANCES

Objective measurement of human tolerance to +G sub z acceleration stress
[NASA-TM-81166] N80-18709

Vibration injuries of the hand and arm: Their occurence and the evolution of standards and limits
[ISVR-TR-101] N80-18713

HYDROCARBONS

The carbon isotope biogeochemistry of the individual hydrocarbons in bat guano and the ecology of insectivorous bats in the region of Carlsbad, New Mexico
[NASA-TM-81164] N80-18680

HYDROLYSIS

Operational description of microsystems formation in prebiological molecular evolution
A80-26217

Oligo-glycine synthesis in an aqueous solution of glycine under oxidative conditions --- prebiotic
A80-26218

HYPERCAPNIA

The effects of hypoxia and hypercapnia on myocardial adenosine triphosphatase activity
A80-28350

Effect of hypoxia and hypercapnia on lactate and pyruvate levels in rat blood and mycardium
N80-19775

HYPEROXIA

Effect of hyperoxia on oxygen transport properties of blood
N80-19763

HYPERTENSION

Echocardiography in assessing acute pulmonary hypertension due to pulmonary embolism
A80-25823

HYPODYNAMIA

A model for hypokinesia: Effects on muscle atrophy in the rat
A80-28188

Effect of restricted motion in high temperature on enzymatic activity of the pancreas
[NASA-TM-76063] N80-18683

Effects of gravitational stress, hypokinesia and hypodynamia on the structure of the vascular bed of the spleen
[NASA-TM-75934] N80-18711

Metabolism during hypodynamia
[NASA-TM-75996] N80-19785

HYPOKINESIA

A model for hypokinesia: Effects on muscle atrophy in the rat
A80-28188

Effect of restricted motion in high temperature on enzymatic activity of the pancreas
[NASA-TM-76063] N80-18683

The effects of adrenalectomy and corticsteroid injection on the fibrinolytic activity of complex heparin compounds in the blood during immobilization
[NASA-TM-75985] N80-18685

Influence of ambient temperatures on the production of restraint ulcers in the rat
[NASA-TM-76028] N80-18686

Features of cholinergic cardia regulation under conditions of hypokinesia
[NASA-TM-76044] N80-18687

Topochemical differences in the amount of RNA in the motoneurons of the spinal chord in hypoxia and hypokinesia
[NASA-TM-75994] N80-18689

Experimental investigation of the role of thyrocalcitonin in the prophylaxis of disturbances in the water-salt and mineral metabolism during a 30-day hypokinesia
[NASA-TM-75938] N80-18700

Restraint ulcers in the rat. 1: Influence on ulcer frequency of fasting and of environmental temperature associated with immobilization of varying durations
[NASA-TM-76031] N80-18705

Effect of hypokinesia on contractile function of cardiac muscle
[NASA-TM-76061] N80-18708

Effects of gravitational stress, hypokinesia and hypodynamia on the structure of the vascular bed of the spleen
[NASA-TM-75934] N80-18711

Effect of graded physical load on the state of the liver from morphometric data and biochemical blood indices of rats against a background of hypokinesia
[NASA-TM-75969] N80-19750

Effectiveness of using thyrocalcitonin for the prevention of a calcium metabolic disorder in the mineralized tissues of rabbits with 30 days hypokinesia
[NASA-TM-75987] N80-19751

Dynamics of erythrocyte count, hemoglobin, and catalase activity in rat blood in hypokinesia, muscular activity and restoration
[NASA-TM-76058] N80-19752

State of the mineral component of rat bone tissue during hypokinesia and the recovery period
[NASA-TM-76059] N80-19753

External respiration and acid-base balance of human blood during long-term antiorthostatic hypokinesia and in the recovery period
N80-19764

Distinctions in development of pyrogenal fever in animals following prolonged hypokinesia
N80-19765

Dynamics of stress reaction of rats during experimental hypokinesia varying in duration, and possibility of correction thereof
N80-19771

Effect of brief antiorthostatic hypokinesia on blood immunoglobulin content
N80-19772

Effect of hypokinesia on cardiac contractile function and nervous regulation of the heart
[NASA-TM-75970] N80-19783

Alimentary hypokinesia
[NASA-TM-75989] N80-19784

HYPOTHALAMUS

Changes in body temperature and metabolic rate after injection of calcium into the caudal hypothalamus of the rabbit
A80-27078

HYPOTHERMIA

Variable open-loop gain in the control of thermogenesis in cold-exposed rabbits
A80-28189

HYPOXIA

Comparison of physiological responses to hypoxia at high altitudes between highlanders and lowlanders
A80-25763

Chronic propranolol treatment blunts right ventricular hypertrophy in rats at high altitude
A80-28187

The effects of hypoxia and hypercapnia on myocardial adenosine triphosphatase activity
A80-28350

Topochemical differences in the amount of RNA in the motoneurons of the spinal chord in hypoxia and hypokinesia
[NASA-TM-75994] N80-18689

Effect of hypoxia and hypercapnia on lactate and pyruvate levels in rat blood and mycardium
N80-19775

I

IMAGE PROCESSING
Models of human vision in digital image bandwidth compression
N80-18697

IMMOBILIZATION
Multipurpose rotating machine for immobilization and conducting studies on small laboratory animals
[NASA-TM-76049] N80-18682
Effect of habituation on the susceptibility of the rat to restraint ulcers
[NASA-TM-76072] N80-19748
Reaction of chickens to graduated length of exposure to stress
[NASA-TM-76071] N80-19754

IMMUNITY
Effect of simulated weightlessness on the immune system in rats
A80-25894

INDICATING INSTRUMENTS
A method of determination of scale numbering taking into account the carrying capacity of an operator
A80-27065

INFORMATION THEORY
Application of mutual amount of information for time delay estimation --- its use in the diagnosis of epilepsy
[TRT-210] N80-18714

INHIBITORS
The effect of SQ-20881, an inhibitor of carboxycathepsin /angiotensin of 1-transforming enzyme/ on the peripheral blood circulation during the early postresuscitation period
A80-26425

INJURIES
Vibration injuries of the hand and arm: Their occurence and the evolution of standards and limits
[ISVR-TR-101] N80-18713

INSTRUMENT ERRORS
A method of determination of scale numbering taking into account the carrying capacity of an operator
A80-27065

INTERNATIONAL COOPERATION
Cosmos 81 US/USSR cardiovascular study: Experiment implementation plan
[NASA-TM-81178] N80-18710

INTERSTELLAR MATTER
Role of interstellar molecules in prebiological evolution
A80-26219

INTESTINES
The effect of vasoactive agents on the resistance and capacitance vessels of the small intestine at high altitude
A80-26029

INTRACRANIAL PRESSURE
Induction p[illegible] biological radiosonde
[NASA-CASE-[illegible]] N80-18691

INTRAOCULAR PRESSURE
Intra-ocular pressure normalization technique and equipment
[NASA-CASE-LEW-12723-1] N80-18690

INTRAVASCULAR SYSTEM
Intravascular hemolysis in acute mountain sickness
A80-25896

IONIC MOBILITY
The role of Na/+/ in transport processes of bacterial membranes
A80-27077

K

KIDNEYS
Kidney cell electrophoresis
[NASA-CR-160555] N80-19782

KINEMATICS
On the structural and kinematic synthesis of open-loop manipulators. I - Basic structural and kinematic procedures
A80-26335

KINESTHESIA
Audiokinesthetic relationships and the time of simple motor response to auditory and kinesthetic stimuli
A80-25831

KITS
Suggestions for the contents of the Aviation Board survival kit
[FOA-A-59004-H3(H9)] N80-18721

L

LACTATES
Effect of hypoxia and hypercapnia on lactate and pyruvate levels in rat blood and myocardium
N80-19775

LEARNING
Biofeedback. A bibliography with abstracts
[PB80-803117] N80-19790

LEARNING THEORY
Learning by understanding analogies
[AD-A078123] N80-19793

LIFE SUPPORT SYSTEMS
A potassium superoxide /KO2/ life support system for Deep Quest
A80-28270
Life support in the Shuttle Era
[AAS 79-253] A80-28713
Development of a nitrogen generation system
[NASA-CR-152333] N80-19800

LIGHT (VISIBLE RADIATION)
Spatial summation of monochromatic light in the visual system
A80-25828
The dependence of thresholds of detection of moving single bands of light on their spectrum and speed
A80-25830

LIMBS (ANATOMY)
Studies of limb-dislodging forces acting on an ejection seat occupant
A80-25895
Vibration injuries of the hand and arm: Their occurence and the evolution of standards and limits
[ISVR-TR-101] N80-18713

LIPID METABOLISM
Circadian rhythmicity in ventricular myocardial and diaphragmatic metabolism
N80-18695
Rat plasma and tissue lipids after a long-term space flight
N80-19773

LIVER
Effect of graded physical load on the state of the liver from morphometric data and biochemical blood indices of rats against a background of hypokinesia
[NASA-TM-75969] N80-19750

LONG DURATION SPACE FLIGHT
Scheduling work and rest periods during long-term space flights
N80-19756
Effects of flights differing in duration on protein composition of cosmonauts blood
N80-19757
Effects of long-term space flights on reactions of adrenal cortex and medulla
N80-19759

LOW TEMPERATURE ENVIRONMENTS
Variable open-loop gain in the control of thermogenesis in cold-exposed rabbits
A80-28189

LUMINANCE
Size and luminance discrimination in the peripheral visual field
[NBL-R-760] N80-18703

LUNGS
Comparative analysis of lung models used to study the mechanics of breathing
A80-25835
Mass transfer studies of pulmonary function
N80-18700
A continuum model of protein transport across the endothelium in the lungs and in the body of humans
N80-19778

LYMPHOCYTES

Effects of 25 and 50 MeV protons on human peripheral blood lymphocyte chromosomes in vitro N80-19767

M

MAGNETIC FIELDS

Study of radioprotective effect of high-intensity magnetic fields on mammalian cell cultures N80-19776

Studies of the effects of stationary magnetic fields on rat erythron N80-19777

MAN MACHINE SYSTEMS

Modeling requirements for network simulation of human-machine systems N80-18717

Toward a remotely-manned energy and production economy [AD-A078069] N80-19804

MANGANESE OXIDES

Viking gas exchange reaction - Simulation on UV-irradiated manganese dioxide substrate A80-26391

MANIPULATORS

On the structural and kinematic synthesis of open-loop manipulators. I - Basic structural and kinematic procedures A80-26335

MANNED SPACE FLIGHT

STS mission duration enhancement study: (orbiter habitability) [NASA-CR-160535] N80-18718

USSR report: Space biology and aerospace medicine, v. 14, no. 1 [JPRS-75251] N80-19755

Development of a nitrogen generation system [NASA-CR-152333] N80-19800

MANPOWER

Human work measurement. A bibliography with abstracts [PB80-803166] N80-19807

MANUAL CONTROL

Shuttle payload, manual vs. automated functions [AAS 79-210] A80-28700

MARS SURFACE SAMPLES

Some final conclusions and supporting experiments related to the search for organic compounds on the surface of Mars A80-26390

Viking gas exchange reaction - Simulation on UV-irradiated manganese dioxide substrate A80-26391

MASS TRANSFER

Mass transfer studies of pulmonary function N80-18700

MATHEMATICAL MODELS

On the audition coordinating cerebral activity A80-27830

The human body temperature regulation system --- closed control loop [RAE-LIB-TRANS-2019] N80-18702

MEASURING INSTRUMENTS

A device for determining the intensity of partial sweating [NASA-TM-75429] N80-19801

MECHANICAL ENGINEERING

Shuttle payload, manual vs. automated functions [AAS 79-210] A80-28700

MECHANIZATION

General methods to enable robots with vision to acquire, orient and transport workpieces [PB80-106388] N80-19808

MEDICAL EQUIPMENT

Intra-ocular pressure normalization technique and equipment [NASA-CASE-LEW-12723-1] N80-18690

MEMBRANES

Spectral analysis of conduction fluctuations of calcium channels in a nerve-cell membrane A80-26424

MENTAL HEALTH

Evaluation and forecasting of mental fitness of flight personnel in the presence of neurosis N80-19770

MENTAL PERFORMANCE

Analysis of mental load by applying polynomially related measurement structures --- German thesis A80-25677

Individual peculiarities of the space-time organization of the bioelectric activity of the brain in a probalilistic prediction situation A80-25838

METABOLISM

Effects of fasting and refeeding on the metabolic response to a standard meal in man A80-25175

Changes in body temperature and metabolic rate after injection of calcium into the caudal hypothalamus of the rabbit A80-27078

Metabolism during hypodynamia [NASA-TM-75996] N80-19785

MICROBIOLOGY

NASA standard procedures for the microbiological examination of space hardware [NASA-TM-80756] N80-19749

MICROWAVES

Microwaves induce peripheral vasodilation in squirrel monkey A80-27261

MILITARY OPERATIONS

Representing human thought and response in military conflict simulation models N80-19813

MILITARY PSYCHOLOGY

Pilot selection using psychological methods [FOA-C-55024-H7] N80-18716

MINERAL METABOLISM

Experimental investigation of the role of thyrocalcitonin in the prophylaxis of disturbances in the water-salt and mineral metabolism during a 30-day hypokinesia [NASA-TM-75938] N80-18704

MODELS

Comparative analysis of lung models used to study the mechanics of breathing A80-25835

MOLECULAR BIOLOGY

Role of interstellar molecules in prebiological evolution A80-26219

MOLECULAR INTERACTIONS

A conformational rationale for the origin of the mechanism of nucleicacid-directed protein synthesis of 'living' organisms A80-26215

MONOCHROMATIC RADIATION

Spatial summation of monochromatic light in the visual system A80-25828

MONOCULAR VISION

Effect of field of view and monocular viewing on angular size judgements in an outdoor scene [NASA-TM-81176] N80-19792

MOTION AFTEREFFECTS

Visual and postural motion aftereffects following parabolic flight A80-25892

MOTION PERCEPTION

The dependence of thresholds of detection of moving single bands of light on their spectrum and speed A80-25830

Effect of cursor characteristics on pilots' tracking performance on a cathode-ray tube in dynamic simulation A80-28556

Illusory reversal of extrafoveally perceived displacement A80-28775

MOTION PICTURES

Aviation training using video disk technology N80-19828

MOTION SICKNESS

Evaluation of the relationship between motion sickness symptomatology and blood pressure, heart rate, and body temperature A80-25890

Motion sickness in the squirrel monkey A80-25891

Effect of sodium bicarbonate on reactivity and trophics of vestibular analyzer N80-19769

MOUNTAIN INHABITANTS
Comparison of physiological responses to hypoxia at high altitudes between highlanders and lowlanders A80-25763
MUSCLES
Fatigue in skeletal muscle N80-18693
MUSCULAR FATIGUE
Peripheral fatigue under local static work of varying intensity A80-25833
Fatigue in skeletal muscle N80-18693
MUSCULAR FUNCTION
A model for hypokinesia: Effects on muscle atrophy in the rat A80-28188
Fatigue in skeletal muscle N80-18693
Microvascular determinants of oxygen supply in resting and contracting striated muscle N80-18694
Effect of hypokinesia on contractile function of cardiac muscle [NASA-TM-76061] N80-18708
Dynamics of stress reaction of rats during experimental hypokinesia varying in duration, and possibility of correction thereof N80-19771
MUSCULAR STRENGTH
Muscular force-velocity alterations consequent to slow and fast velocity power training N80-18696
MYOCARDIUM
The effects of hypoxia and hypercapnia on myocardial adenosine triphosphatase activity A80-28350
Circadian rhythmicity in ventricular myocardial and diaphragmatic metabolism N80-18695
Effect of hypokinesia on contractile function of cardiac muscle [NASA-TM-76061] N80-18708
Effect of hypoxia and hypercapnia on lactate and pyruvate levels in rat blood and myocardium N80-19775

N

NEUROPHYSIOLOGY
Neurophysiological mechanisms of filtering in the visual system A80-25827
Investigation of the functional state of the CNS under conditions of altitude decompression A80-25836
Some aspects of the organization of nocturnal sleep in normal and pathological states A80-25837
Spectral analysis of conduction fluctuations of calcium channels in a nerve-cell membrane A80-26424
Effect of consecutive cooling and immobilization on catecholamine metabolism in rat tissues [NASA-TM-75962] N80-18684
The effects of stimulation of the anterior cingulate gyrus in cats with freedom of movement [NASA-TM-76055] N80-18688
Reaction of chickens to graduated length of exposure to stress [NASA-TM-76071] N80-19754
Effect of hypokinesia on cardiac contractile function and nervous regulation of the heart [NASA-TM-75970] N80-19783
NEUROSES
Evaluation and forecasting of mental fitness of flight personnel in the presence of neurosis N80-19770
NIGHT VISION
A comparison of accommodative responsiveness and contrast sensitivity for sinusoidal gratings A80-27075
NITROGEN
Development of a nitrogen generation system [NASA-CR-152333] N80-19800
NOISE (SOUND)
Effects of artillery noise on the hearing of protected crew personnel [AD-A078664] N80-19805
NUCLEAR REACTORS
Activities report on reactor physics, 1977 to 1978 N80-18712
NUCLEIC ACIDS
A conformational rationale for the origin of the mechanism of nucleicacid-directed protein synthesis of 'living' organisms A80-26215
NUCLEOTIDES
Self-condensation of activated dinucleotides on polynucleotide templates with alternating sequences A80-25202
Early assignments of the genetic code dependent upon protein structure A80-26214
NUMERICAL CONTROL
On the structural and kinematic synthesis of open-loop manipulators. I - Basic structural and kinematic procedures A80-26335

O

OCULOMETERS
Contact ring for registering the turning of the eyeball A80-25839
OPERATOR PERFORMANCE
A method of determination of scale numbering taking into account the carrying capacity of an operator A80-27065
OPTICAL ILLUSION
Illusory reversal of extrafoveally perceived displacement A80-28775
The influence of colour and contour rivalry on the magnitude of the tilt illusion A80-28787
ORGANIC COMPOUNDS
Some final conclusions and supporting experiments related to the search for organic compounds on the surface of Mars A80-26390
OXIDATION
Oligo-glycine synthesis in an aqueous solution of glycine under oxidative conditions --- prebiotic A80-26218
OXYGEN CONSUMPTION
Some aspects concerning the dynamic evaluation of oxygen consumption in exercise tests A80-28555
Effect of hyperoxia on oxygen transport properties of blood N80-19763
OXYGEN MASKS
Prototype: Preliminary study on emergency breathing apparatus [POA-C-40103-C2] N80-18720
OXYGEN REGULATORS
Microvascular determinants of oxygen supply in resting and contracting striated muscle N80-18694
OXYGEN SUPPLY EQUIPMENT
Investigation of flow rates of oxygen systems used in general aviation A80-25899

P

PANCREAS
Effect of restricted motion in high temperature on enzymatic activity of the pancreas [NASA-TM-76063] N80-18683
PARABOLIC FLIGHT
Visual and postural motion aftereffects following parabolic flight A80-25892
PASSENGER AIRCRAFT
Human comfort response to random motions with combined yawing and rolling motions [NASA-CR-159187] N80-19802

PEPTIDES
Operational description of microsystems formation in prebiological molecular evolution
A80-26217
Oligo-glycine synthesis in an aqueous solution of glycine under oxidative conditions --- prebiotic
A80-26218
The effect of SQ-20881, an inhibitor of carboxycathepsin /angiotensin of 1-transforming enzyme/ on the peripheral blood circulation during the early postresuscitation period
A80-26425

PERCEPTUAL TIME CONSTANT
Illusory reversal of extrafoveally perceived displacement
A80-28775

PERIPHERAL CIRCULATION
The effect of SQ-20881, an inhibitor of carboxycathepsin /angiotensin of 1-transforming enzyme/ on the peripheral blood circulation during the early postresuscitation period
A80-26425

PERIPHERAL NERVOUS SYSTEM
Microwaves induce peripheral vasodilation in squirrel monkey
A80-27261

PERIPHERAL VISION
Size and luminance discrimination in the peripheral visual field
[MRL-R-760] N80-18703

PERSONALITY
The power process: A synthesis theory of power
N80-18715

PERSONNEL SELECTION
Astronaut crew selection
[AAS 79-207] A80-28699

PERSPIRATION
A device for determining the intensity of partial sweating
[NASA-TM-75429] N80-19801

PHARMACOLOGY
The effect of vasoactive agents on the resistance and capacitance vessels of the small intestine at high altitude
A80-26029

PHOTOELECTRIC GENERATORS
Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference
A80-25026

PHYSICAL EXERCISE
Ventilatory control during exercise with increased external dead space
A80-25725
Vital capacity, exercise performance, and blood gases at altitude as related to age
A80-25988
Exercise thermoregulation after 14 days of bed rest
A80-25989
Echocardiographic left ventricular masses in distance runners and weight lifters
A80-25991
Some aspects concerning the dynamic evaluation of oxygen consumption in exercise tests
A80-28555
Muscular force-velocity alterations consequent to slow and fast velocity power training
N80-18696
Effect of graded physical load on the state of the liver from morphometric data and biochemical blood indices of rats against a background of hypokinesia
[NASA-TM-75969] N80-19750
Dynamics of erythrocyte count, hemoglobin, and catalase activity in rat blood in hypokinesia, muscular activity and restoration
[NASA-TM-76058] N80-19752

PHYSICAL FITNESS
Muscular force-velocity alterations consequent to slow and fast velocity power training
N80-18696

PHYSICAL WORK
Peripheral fatigue under local static work of varying intensity
A80-25833
Functional stability of the trained organism under prolonged uniform loads in standard conditions
A80-25834

PHYSIOLOGICAL EFFECTS
Study of physiological effects of weightlessness and artificial gravity in the flight of the biosatellite Cosmos-936
A80-25283
The effects of hypoxia and hypercapnia on myocardial adenosine triphosphatase activity
A80-28350
Effect of restricted motion in high temperature on enzymatic activity of the pancreas
[NASA-TM-76063] N80-18683
Effect of consecutive cooling and immobilization on catecholamine metabolism in rat tissues
[NASA-TM-75962] N80-18684
Features of cholinergic cardia regulation under conditions of hypokinesia
[NASA-TM-76044] N80-18687
Muscular force-velocity alterations consequent to slow and fast velocity power training
N80-18696
Hormone supply of the organism in prolonged emotional stress
[NASA-TM-76046] N80-18706
Physiologic reactions during five weeks of continuous residence in an artificial humid and hot climate
[NASA-TM-75356] N80-18707
Effects of gravitational stress, hypokinesia and hypodynamia on the structure of the vascular bed of the spleen
[NASA-TM-75934] N80-18711
Effect of habituation on the susceptibility of the rat to restraint ulcers
[NASA-TM-76072] N80-19748
Effect of graded physical load on the state of the liver from morphometric data and biochemical blood indices of rats against a background of hypokinesia
[NASA-TM-75969] N80-19750
Effectiveness of using thyrocalcitonin for the prevention of a calcium metabolic disorder in the mineralized tissues of rabbits with 30 days hypokinesia
[NASA-TM-75987] N80-19751
Dynamics of erythrocyte count, hemoglobin, and catalase activity in rat blood in hypokinesia, muscular activity and restoration
[NASA-TM-76058] N80-19752
State of the mineral component of rat bone tissue during hypokinesia and the recovery period
[NASA-TM-76059] N80-19753
Reaction of chickens to graduated length of exposure to stress
[NASA-TM-76071] N80-19754
USSR report: Space biology and aerospace medicine, v. 14, no. 1
[JPRS-75251] N80-19755
Effects of unusual schedules of daily activity and sleep deprivation on man's functional state and work fitness
N80-19758
Effect of hyperoxia on oxygen transport properties of blood
N80-19763
External respiration and acid-base balance of human blood during long-term antiorthostatic hypokinesia and in the recovery period
N80-19764
Distinctions in development of pyrogenal fever in animals following prolonged hypokinesia
N80-19765
Alimentary hypokinesia
[NASA-TM-75989] N80-19784
Metabolism during hypodynamia
[NASA-TM-75996] N80-19785
Blood circulation under conditions of weightlessness
[NASA-TM-76036] N80-19786
Effects of artillery noise on the hearing of protected crew personnel
[AD-A078664] N80-19805

PHYSIOLOGICAL RESPONSES
Ventilatory control during exercise with increased external dead space
A80-25725
Comparison of physiological responses to hypoxia at high altitudes between highlanders and lowlanders
A80-25763

Audiokinesthetic relationships and the time of simple motor response to auditory and kinesthetic stimuli
A80-25831

Peripheral fatigue under local static work of varying intensity
A80-25833

Functional stability of the trained organism under prolonged uniform loads in standard conditions
A80-25834

Investigation of the functional state of the CNS under conditions of altitude decompression
A80-25836

Some aspects of the organization of nocturnal sleep in normal and pathological states
A80-25837

Individual peculiarities of the space-time organization of the bioelectric activity of the brain in a probalilistic prediction situation
A80-25838

Effects of centrifugation stress on pituitary-gonadal function in male rats
A80-25987

Fluid shifts and endocrine responses during chair rest and water immersion in man
A80-25990

Effects of long-term space flights on reactions of adrenal cortex and medulla
N80-19759

PHYSIOLOGICAL TESTS

Effects of centrifugation stress on pituitary-gonadal function in male rats
A80-25987

Vital capacity, exercise performance, and blood gases at altitude as related to age
A80-25988

Exercise thermoregulation after 14 days of bed rest
A80-25989

Chronic propranolol treatment blunts right ventricular hypertrophy in rats at high altitude
A80-28187

A model for hypokinesia: Effects on muscle atrophy in the rat
A80-28188

Variable open-loop gain in the control of thermogenesis in cold-exposed rabbits
A80-28189

PHYSIOLOGY

Concerning some mechanisms of visual recognition
A80-25826

Investigation of the self-regulation of sensorimotor activity
A80-25832

Contact ring for registering the turning of the eyeball
A80-25839

Cosmos 81 US/USSR cardiovascular study: Experiment implementation plan
[NASA-TM-81178] N80-18710

PIEZOELECTRIC TRANSDUCERS

Ultrasonic Doppler directional blood flow velocity meter
[RAE-LIB-TRANS-1918] N80-19780

PIGMENTS

Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference
A80-25026

Spectrophotometric identification of the pigment associated with light-driven primary sodium translocation in Halobacterium halobium
A80-26015

PILOT PERFORMANCE

A dual task investigation of pilots' skill level
A80-28554

Effect of cursor characteristics on pilots' tracking performance on a cathode-ray tube in dynamic simulation
A80-28556

Stress factors on pilot performance. A bibliography with abstracts
[PB80-803075] N80-19794

PILOT SELECTION

Pilot selection using psychological methods
[FOA-C-55024-H7] N80-18716

PILOT TRAINING

Aviation training using video disk technology
N80-19828

PITUITARY GLAND

Effects of centrifugation stress on pituitary-gonadal function in male rats
A80-25987

PLANTS (BOTANY)

Determination of ethylene produced by pea seedlings under near-zero gravity conditions - Preliminary studies
[AAS 79-216] A80-28707

POLAR REGIONS

Suggestions for the contents of the Aviation Board survival kit
[FOA-A-59004-H3(H9)] N80-18721

POLYCYTHEMIA

Chronic propranolol treatment blunts right ventricular hypertrophy in rats at high altitude
A80-28187

POLYMER CHEMISTRY

Self-condensation of activated dinucleotides on polynucleotide templates with alternating sequences
A80-25202

POLYMERIZATION

Operational description of microsystems formation in prebiological molecular evolution
A80-26217

Oligo-glycine synthesis in an aqueous solution of glycine under oxidative conditions --- prebiotic
A80-26218

POLYPEPTIDES

Effect of the enzymatic inhibitor of Kunitz on the gastric lesions from reserpine, from phenylbutazone, from pyloric ligation and by restraint in the rat
[NASA-TM-76027] N80-18681

PORTABLE EQUIPMENT

Project FIRES - Firefighters Integrated Response Equipment System. Volume 1: Program overview and summary, phase 1A
[NASA-CR-161399] N80-19795

Project FIRES - Firefighters Integrated Response Equipment System. Volume 2: Protective ensemble performance standards goals for firefighter protection, phase 1A
[NASA-CR-161400] N80-19796

Project FIRES - Firefighters Integrated Response Equipment System. Volume 3: Test and evaluation report, phase 1A
[NASA-CR-161401] N80-19797

Project FIRES - Firefighters Integrated Response Equipment System. Volume 4: Technology demonstration ensemble, phase 1A
[NASA-CR-161402] N80-19798

Project FIRES - Firefighters Integrated Response Equipment System. Volume 5: Prototype protective ensemble data package, phase 1A
[NASA-CR-161403] N80-19799

POSTURE

Visual and postural motion aftereffects following parabolic flight
A80-25892

POTASSIUM OXIDES

A potassium superoxide /KO2/ life support system for Deep Quest
A80-28270

POWER

The power process: A synthesis theory of power
N80-18715

PRESSURE REGULATORS

Intra-ocular pressure normalization technique and equipment
[NASA-CASE-LEW-12723-1] N80-18690

PRODUCTION ENGINEERING

General methods to enable robots with vision to acquire, orient and transport workpieces
[PB80-106388] N80-19808

PROJECT PLANNING

Cosmos 81 US/USSR cardiovascular study: Experiment implementation plan
[NASA-TM-81178] N80-18710

PROTECTION

Lightweight pilot helmets: The issue of weight versus protection
[AD-A076325] N80-19806

PROTECTIVE CLOTHING

A new anti-G value for high-performance aircraft
[AD-A076904] N80-18719

Project FIRES - Firefighters Integrated Response Equipment System. Volume 1: Program overview and summary, phase 1A [NASA-CR-161399] N80-19795

Project FIRES - Firefighters Integrated Response Equipment System. Volume 2: Protective ensemble performance standards goals for firefighter protection, phase 1A [NASA-CR-161400] N80-19796

Project FIRES - Firefighters Integrated Response Equipment System. Volume 3: Test and evaluation report, phase 1A [NASA-CR-161401] N80-19797

Project FIRES - Firefighters Integrated Response Equipment System. Volume 4: Technology demonstration ensemble, phase 1A [NASA-CR-161402] N80-19798

Project FIRES - Firefighters Integrated Response Equipment System. Volume 5: Prototype protective ensemble data package, phase 1A [NASA-CR-161403] N80-19799

PROTEINS

Early assignments of the genetic code dependent upon protein structure A80-26214

A conformational rationale for the origin of the mechanism of nucleicacid-directed protein synthesis of 'living' organisms A80-26215

The evolution of the protein synthesis system. II - From chemical evolution to biological evolution A80-26216

Effects of flights differing in duration on protein composition of cosmonauts blood N80-19757

A continuum model of protein transport across the endothelium in the lungs and in the body of humans N80-19778

PROTONS

Effects of 25 and 50 MeV protons on human peripheral blood lymphocyte chromosones in vitro N80-19767

PROTOTYPES

Prototype: Preliminary study on emergency breathing apparatus [FOA-C-40103-C2] N80-18720

PSYCHOACOUSTICS

Rate of acoustic change may underlie hemispheric specialization for speech perception A80-27260

PSYCHOLOGICAL TESTS

Pilot selection using psychological methods [FOA-C-55024-H7] N80-18716

PSYCHOMETRICS

Analysis of mental load by applying polynomially related measurement structures --- German thesis A80-25677

PSYCHOPHYSIOLOGY

Electroretinographic and psychophysical measures of cone spectral mechanisms using the two-color threshold technique A80-28786

Biofeedback. A bibliography with abstracts [PB80-803117] N80-19790

PULMONARY CIRCULATION

Echocardiography in assessing acute pulmonary hypertension due to pulmonary embolism A80-25823

PULMONARY FUNCTIONS

Vital capacity, exercise performance, and blood gases at altitude as related to age A80-25988

Mass transfer studies of pulmonary function N80-18700

PYRUVATES

Effect of hypoxia and hypercapnia on lactate and pyruvate levels in rat blood and myocardium N80-19775

R

RADIATION DOSAGE

Microwaves induce peripheral vasodilation in squirrel monkey A80-27261

RADIATION EFFECTS

The radiation protection program [EUR-5972] N80-18701

Effects of 25 and 50 MeV protons on human peripheral blood lymphocyte chromosones in vitro N80-19767

Study of radioprotective effect of high-intensity magnetic fields on mammalian cell cultures N80-19776

RADIATION MEDICINE

Activities report on reactor physics, 1977 to 1978 N80-18712

RADIATION PROTECTION

The radiation protection program [EUR-5972] N80-18701

RADIOACTIVE ISOTOPES

Nuclear cardiology. I - Radionuclide angiographic assessment of left ventricular contraction: Uses, limitations and future directions. II - The role of myocardial perfusion imaging using thallium-201 in diagnosis of coronary heart disease A80-25824

RADIOSONDES

Induction powered biological radiosonde [NASA-CASE-ARC-11120-1] N80-18691

REACTION TIME

Audiokinesthetic relationships and the time of simple motor response to auditory and kinesthetic stimuli A80-25831

REACTOR PHYSICS

Activities report on reactor physics, 1977 to 1978 N80-18712

REMOTE CONTROL

Toward a remotely-manned energy and production economy [AD-A078069] N80-19804

RESEARCH AND DEVELOPMENT

The radiation protection program [EUR-5972] N80-18701

RESPIRATION

Ventilatory control during exercise with increased external dead space A80-25725

RESPIRATORY PHYSIOLOGY

Ventilatory control during exercise with increased external dead space A80-25725

Comparative analysis of lung models used to study the mechanics of breathing A80-25835

Methods for identifying respiratory oscillations disclose altitude effects A80-28190

REST

Fluid shifts and endocrine responses during chair rest and water immersion in man A80-25990

RESUSCITATION

The effect of SQ-20881, an inhibitor of carboxycathepsin /angiotensin of 1-transforming enzyme/ on the peripheral blood circulation during the early postresuscitation period A80-26425

RIBONUCLEIC ACIDS

Topochemical differences in the amount of RNA in the motoneurons of the spinal chord in hypoxia and hypokinesia [NASA-TM-75994] N80-18689

ROBOTS

General methods to enable robots with vision to acquire, orient and transport workpieces [PB80-106388] N80-19808

RUNNING

Echocardiographic left ventricular masses in distance runners and weight lifters A80-25991

S

SACCADIC EYE MOVEMENTS

Interaction of pre- and postsaccadic patterns having the same coordinates in space A80-27074

SCALE (RATIO)

A method of determination of scale numbering taking into account the carrying capacity of an operator A80-27065

SEEDS
Determination of ethylene produced by pea seedlings under near-zero gravity conditions - Preliminary studies
[AAS 79-216] A80-28707
SEIZURES
Application of mutual amount of information for time delay estimation --- its use in the diagnosis of epilepsy
[TRT-210] N80-18714
SEMICIRCULAR CANALS
Responses of the primary vestibular afferents of the frog to direct vibratory stimulation of the semicircular canal
A80-26030
SENSORIMOTOR PERFORMANCE
Audiokinesthetic relationships and the time of simple motor response to auditory and kinesthetic stimuli
A80-25831
Investigation of the self-regulation of sensorimotor activity
A80-25832
SIGNAL PROCESSING
On the audition coordinating cerebral activity
A80-27830
SIZE (DIMENSIONS)
Size and luminance discrimination in the peripheral visual field
[NRL-R-760] N80-18703
SLEEP
Some aspects of the organization of nocturnal sleep in normal and pathological states
A80-25837
SLEEP DEPRIVATION
Effects of unusual schedules of daily activity and sleep deprivation on man's functional state and work fitness
N80-19758
SODIUM
Spectrophotometric identification of the pigment associated with light-driven primary sodium translocation in Halobacterium halobium
A80-26015
The role of Na/+/ in transport processes of bacterial membranes
A80-27077
SODIUM CARBONATES
Effect of sodium bicarbonate on reactivity and trophics of vestibular analyzer
N80-19769
SOLAR ENERGY CONVERSION
Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference
A80-25026
SPACE FLIGHT
Rat plasma and tissue lipids after a long-term space flight
N80-19773
SPACE FLIGHT STRESS
Motion sickness in the squirrel monkey
A80-25891
SPACE FLIGHT TRAINING
Astronaut crew selection
[AAS 79-207] A80-28699
SPACE PERCEPTION
Effect of field of view and monocular viewing on angular size judgements in an outdoor scene
[NASA-TM-81176] N80-19792
SPACE SHUTTLE ORBITERS
STS mission duration enhancement study: (orbiter habitability)
[NASA-CR-160535] N80-18718
SPACE SHUTTLE PAYLOADS
Shuttle payload, manual vs. automated functions
[AAS 79-210] A80-28700
Life support in the Shuttle Era
[AAS 79-253] A80-28713
SPACE TRANSPORTATION SYSTEM
STS mission duration enhancement study: (orbiter habitability)
[NASA-CR-160535] N80-18718
SPACEBORNE EXPERIMENTS
Viking gas exchange reaction - Simulation on UV-irradiated manganese dioxide substrate
A80-26391
Determination of ethylene produced by pea seedlings under near-zero gravity conditions - Preliminary studies
[AAS 79-216] A80-28707
SPACECRAFT CABIN ATMOSPHERES
Probability of altitude decompression disorders when breathing oxygen containing human waste gases
N80-19762
Development of a nitrogen generation system
[NASA-CR-152333] N80-19800
SPACECRAFT CONTAMINATION
NASA standard procedures for the microbiological examination of space hardware
[NASA-TM-80756] N80-19749
SPACECRAFT ENVIRONMENTS
Life support in the Shuttle Era
[AAS 79-253] A80-28713
STS mission duration enhancement study: (orbiter habitability)
[NASA-CR-160535] N80-18718
Rat plasma and tissue lipids after a long-term space flight
N80-19773
Functional changes in the adrenal cortex during simulation of stress situations in the presence of high carbon monoxide levels
N80-19774
SPACECREWS
Astronaut crew selection
[AAS 79-207] A80-28699
Life support in the Shuttle Era
[AAS 79-253] A80-28713
SPATIAL FILTERING
Spatial filtering and mechanisms of perception
[AD-A077622] N80-19788
SPECTRAL SENSITIVITY
Electroretinographic and psychophysical measures of cone spectral mechanisms using the two-color threshold technique
A80-28786
SPECTROPHOTOMETRY
Spectrophotometric identification of the pigment associated with light-driven primary sodium translocation in Halobacterium halobium
A80-26015
SPEECH RECOGNITION
Rate of acoustic change may underlie hemispheric specialization for speech perception
A80-27260
SPINAL CORD
Topochemical differences in the amount of RNA in the motoneurons of the spinal chord in hypoxia and hypokinesia
[NASA-TM-75994] N80-18689
SPLEEN
Effects of gravitational stress, hypokinesia and hypodynamia on the structure of the vascular bed of the spleen
[NASA-TM-75934] N80-18711
STANDARDS
Vibration injuries of the hand and arm: Their occurence and the evolution of standards and limits
[ISVR-TR-101] N80-18713
STRESS (PHYSIOLOGY)
Effect of the enzymatic inhibitor of Kunitz on the gastric lesions from reserpine, from phenylbutazone, from pyloric ligation and by restraint in the rat
[NASA-TM-76027] N80-18681
Effect of restricted motion in high temperature on enzymatic activity of the pancreas
[NASA-TM-76063] N80-18683
Effect of consecutive cooling and immobilization on catecholamine metabolism in rat tissues
[NASA-TM-75962] N80-18684
The effects of adrenalectomy and corticsteroid injection on the fibrinolytic activity of complex heparin compounds in the blood during immobilization
[NASA-TM-75985] N80-18685
Influence of ambient temperatures on the production of restraint ulcers in the rat
[NASA-TM-76028] N80-18686
Features of cholinergic cardia regulation under conditions of hypokinesia
[NASA-TM-76044] N80-18687

Experimental investigation of the role of thyrocalcitonin in the prophylaxis of disturbances in the water-salt and mineral metabolism during a 30-day hypokinesia
[NASA-TM-75938] N80-18704
Restraint ulcers in the rat. 1: Influence on ulcer frequency of fasting and of environmental temperature associated with immobilization of varying durations
[NASA-TM-76031] N80-18705
Hormone supply of the organism in prolonged emotional stress
[NASA-TM-76046] N80-18706
Physiologic reactions during five weeks of continuous residence in an artificial humid and hot climate
[NASA-TM-75356] N80-18707
Effect of hypokinesia on contractile function of cardiac muscle
[NASA-TM-76061] N80-18708
Effects of gravitational stress, hypokinesia and hypodynamia on the structure of the vascular bed of the spleen
[NASA-TM-75934] N80-18711
Effect of habituation on the susceptibility of the rat to restraint ulcers
[NASA-TM-76072] N80-19748
Effect of graded physical load on the state of the liver from morphometric data and biochemical blood indices of rats against a background of hypokinesia
[NASA-TM-75969] N80-19750
Effectiveness of using thyrocalcitonin for the prevention of a calcium metabolic disorder in the mineralized tissues of rabbits with 30 days hypokinesia
[NASA-TM-75987] N80-19751
Dynamics of erythrocyte count, hemoglobin, and catalase activity in rat blood in hypokinesia, muscular activity and restoration
[NASA-TM-76058] N80-19752
State of the mineral component of rat bone tissue during hypokinesia and the recovery period
[NASA-TM-76059] N80-19753
Reaction of chickens to graduated length of exposure to stress
[NASA-TM-76071] N80-19754
Reaction of human blood to chronic exposure to low doses of carbon monoxide in a confined environment
N80-19761
Effect of hyperoxia on oxygen transport properties of blood
N80-19763
External respiration and acid-base balance of human blood during long-term antiorthostatic hypokinesia and in the recovery period
N80-19764
Distinctions in development of pyrogenal fever in animals following prolonged hypokinesia
N80-19765
Dynamics of stress reaction of rats during experimental hypokinesia varying in duration, and possibility of correction thereof
N80-19771
Effect of brief antiorthostatic hypokinesia on blood immunoglobulin content
N80-19772
Functional changes in the adrenal cortex during simulation of stress situations in the presence of high carbon monoxide levels
N80-19774
Alimentary hypokinesia
[NASA-TM-75989] N80-19784
Metabolism during hypodynamia
[NASA-TM-75996] N80-19785
Blood circulation under conditions of weightlessness
[NASA-TM-76036] N80-19786
Certain questions of the acclimatization of construction workers to the conditions of a subtropical climate
[NASA-TM-75728] N80-19787
Stress factors on pilot performance. A bibliography with abstracts
[PB80-803075] N80-19794

STRESS (PSYCHOLOGY)
Hormone supply of the organism in prolonged emotional stress
[NASA-TM-76046] N80-18706
Evaluation and forecasting of mental fitness of flight personnel in the presence of neurosis
N80-19770

STRESS RELAXATION
State of the mineral component of rat bone tissue during hypokinesia and the recovery period
[NASA-TM-76059] N80-19753

STRUCTURAL ENGINEERING
On the structural and kinematic synthesis of open-loop manipulators. I - Basic structural and kinematic procedures
A80-26335

SUBMARINES
A potassium superoxide /KO2/ life support system for Deep Quest
A80-28270

SUBMERGING
Fluid shifts and endocrine responses during chair rest and water immersion in man
A80-25990

SURVIVAL EQUIPMENT
Suggestions for the contents of the Aviation Board survival kit
[FOA-A-59004-H3(H9)] N80-18721

SWITCHING
Microvascular determinants of oxygen supply in resting and contracting striated muscle
N80-18694

SYMPATHETIC NERVOUS SYSTEM
Effect of consecutive cooling and immobilization on catecholamine metabolism in rat tissues
[NASA-TM-75962] N80-18684

SYMPTOMOLOGY
Evaluation of the relationship between motion sickness symptomatology and blood pressure, heart rate, and body temperature
A80-25890

SYNTHESIS
Cyanamide mediated synthesis under plausible primitive earth conditions. VI - The synthesis of glycerol and glycerophosphates
A80-25201

SYSTOLE
Mitral valve prolapse - A review
A80-25897

T

TARGET RECOGNITION
Visual search through color displays - Effects of target-background similarity and background uniformity
A80-28101
Helicopter pilot detection of the two different camouflaged hawk batteries
[AD-A077954] N80-19803

TASKS
A dual task investigation of pilots' skill level
A80-28554

TELEOPERATORS
Toward a remotely-manned energy and production economy
[AD-A078069] N80-19804

TEMPERATURE EFFECTS
Influence of ambient temperatures on the production of restraint ulcers in the rat
[NASA-TM-76028] N80-18686

THERMOREGULATION
Exercise thermoregulation after 14 days of bed rest
A80-25989
Changes in body temperature and metabolic rate after injection of calcium into the caudal hypothalamus of the rabbit
A80-27078
Variable open-loop gain in the control of thermogenesis in cold-exposed rabbits
A80-28189
The human body temperature regulation system --- closed control loop
[RAE-LIB-TRANS-2019] N80-18702

THRESHOLDS (PERCEPTION)
Thresholds of recognition of various features of color stimuli
A80-25829
The dependence of thresholds of detection of moving single bands of light on their spectrum and speed
A80-25830

THYROID GLAND
  Experimental investigation of the role of thyrocalcitonin in the prophylaxis of disturbances in the water-salt and mineral metabolism during a 30-day hypokinesia
  [NASA-TM-75938] N80-18704
TIME SERIES ANALYSIS
  Application of mutual amount of information for time delay estimation --- its use in the diagnosis of epilepsy
  [THT-210] N80-18714
TISSUES (BIOLOGY)
  Rat plasma and tissue lipids after a long-term space flight
  N80-19773
  Kidney cell electrophoresis
  [NASA-CR-160555] N80-19782
TOXICOLOGY
  Reaction of human blood to chronic exposure to low doses of carbon monoxide in a confined environment
  N80-19761
  Probability of altitude decompression disorders when breathing oxygen containing human waste gases
  N80-19762
TRACKING (POSITION)
  Effect of cursor characteristics on pilots' tracking performance on a cathode-ray tube in dynamic simulation
  A80-28556
TRAINING DEVICES
  Aviation training using video disk technology
  N80-19828
TRANSPORT PROPERTIES
  The role of Na/+/ in transport processes of bacterial membranes
  A80-27077
TRANSPORT THEORY
  Mathematical analysis of carbon dioxide transport by blood
  N80-18698
TROPICAL REGIONS
  Certain questions of the acclimatization of construction workers to the conditions of a subtropical climate
  [NASA-TM-75728] N80-19787

U

ULCERS
  Effect of the enzymatic inhibitor of Kunitz on the gastric lesions from reserpine, from phenylbutazone, from pyloric ligation and by restraint in the rat
  [NASA-TM-76027] N80-18681
  Influence of ambient temperatures on the production of restraint ulcers in the rat
  [NASA-TM-76028] N80-18686
  Restraint ulcers in the rat. 1: Influence on ulcer frequency of fasting and of environmental temperature associated with immobilization of varying durations
  [NASA-TM-76031] N80-18705
  Effect of habituation on the susceptibility of the rat to restraint ulcers
  [NASA-TM-76072] N80-19748
ULTRASONICS
  Ultrasonic Doppler directional blood flow velocity meter
  [RAE-LIB-TRANS-1918] N80-19780
ULTRAVIOLET RADIATION
  Viking gas exchange reaction - Simulation on UV-irradiated manganese dioxide substrate
  A80-26391
UNDERWATER ENGINEERING
  A potassium superoxide /KO2/ life support system for Deep Quest
  A80-28270

V

VASCULAR SYSTEM
  The effect of vasoactive agents on the resistance and capacitance vessels of the small intestine at high altitude
  A80-26029
  Effects of gravitational stress, hypokinesia and hypodynamia on the structure of the vascular bed of the spleen
  [NASA-TM-75934] N80-18711
VASODILATION
  Microwaves induce peripheral vasodilation in squirrel monkey
  A80-27261
VESTIBULAR TESTS
  Responses of the primary vestibular afferents of the frog to direct vibratory stimulation of the semicircular canal
  A80-26030
  Effect of sodium bicarbonate on reactivity and trophics of vestibular analyzer
  N80-19769
VIBRATION EFFECTS
  Responses of the primary vestibular afferents of the frog to direct vibratory stimulation of the semicircular canal
  A80-26030
VIBRATIONAL STRESS
  Vibration injuries of the hand and arm: Their occurence and the evolution of standards and limits
  [ISVR-TR-101] N80-18713
VIDEO EQUIPMENT
  Aviation training using video disk technology
  N80-19828
VIEW EFFECTS
  Effect of field of view and monocular viewing on angular size judgements in an outdoor scene
  [NASA-TM-81176] N80-19792
VIKING LANDER 1
  Viking gas exchange reaction - Simulation on UV-irradiated manganese dioxide substrate
  A80-26391
VISION
  Visual and postural motion aftereffects following parabolic flight
  A80-25892
  Models of human vision in digital image bandwidth compression
  N80-18697
VISUAL DISCRIMINATION
  Concerning some mechanisms of visual recognition
  A80-25826
  Neurophysiological mechanisms of filtering in the visual system
  A80-25827
  Spatial summation of monochromatic light in the visual system
  A80-25828
  The dependence of thresholds of detection of moving single bands of light on their spectrum and speed
  A80-25830
  Visual search through color displays - Effects of target-background similarity and background uniformity
  A80-28101
  Size and luminance discrimination in the peripheral visual field
  [NRL-R-760] N80-18703
VISUAL FIELDS
  Size and luminance discrimination in the peripheral visual field
  [NRL-R-760] N80-18703
VISUAL PERCEPTION
  Thresholds of recognition of various features of color stimuli
  A80-25829
  Interaction of pre- and postsaccadic patterns having the same coordinates in space
  A80-27074
  A comparison of accommodative responsiveness and contrast sensitivity for sinusoidal gratings
  A80-27075
  The influence of colour and contour rivalry on the magnitude of the tilt illusion
  A80-28787
  Spatial filtering and mechanisms of perception
  [AD-A077622] N80-19788
  Effect of field of view and monocular viewing on angular size judgements in an outdoor scene
  [NASA-TM-81176] N80-19792
  Helicopter pilot detection of the two different camouflaged hawk batteries
  [AD-A077954] N80-19803
VISUAL STIMULI
  Concerning some mechanisms of visual recognition
  A80-25826

Thresholds of recognition of various features of color stimuli
A80-25829
Interaction of pre- and postsaccadic patterns having the same coordinates in space
A80-27074

VOMITING
Motion sickness in the squirrel monkey
A80-25891

W

WATER PRESSURE
Fluid shifts and endocrine responses during chair rest and water immersion in man
A80-25990

WEIGHT REDUCTION
Lightweight pilot helmets: The issue of weight versus protection
[AD-A076325] N80-19806

WEIGHTLESSNESS
Study of physiological effects of weightlessness and artificial gravity in the flight of the biosatellite Cosmos-936
A80-25283
External respiration and acid-base balance of human blood during long-term antiorthostatic hypokinesia and in the recovery period
N80-19764
Blood circulation under conditions of weightlessness
[NASA-TM-76036] N80-19786

WEIGHTLESSNESS SIMULATION
Effect of simulated weightlessness on the immune system in rats
A80-25894

WORK CAPACITY
Effects of unusual schedules of daily activity and sleep deprivation on man's functional state and work fitness
N80-19758

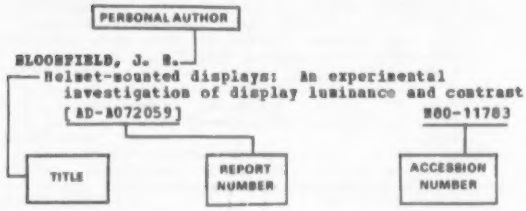
WORK-REST CYCLE
Scheduling work and rest periods during long-term space flights
N80-19756

WORKLOADS (PSYCHOPHYSIOLOGY)
Analysis of mental load by applying polynomially related measurement structures --- German thesis
A80-25677
Functional stability of the trained organism under prolonged uniform loads in standard conditions
A80-25834
NASA TLA workload analysis support. Volume 1: Detailed task scenarios for general aviation and metering and spacing studies
[NASA-CR-3199] N80-19791
Human work measurement. A bibliography with abstracts
[PB80-803166] N80-19807

blank page

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



PERSONAL AUTHOR
BLOOMFIELD, J. R.
Helmet-mounted displays: An experimental investigation of display luminance and contrast
[AD-A072059]
N80-11783
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title of the document is used to provide the user with a brief description of the subject matter. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ABDRAKHMANOV, V. R.
External respiration and acid-base balance of human blood during long-term antiorthostatic hypokinesia and in the recovery period
N80-19764

ABDUSATTAROV, A.
Effect of restricted motion in high temperature on enzymatic activity of the pancreas
[NASA-TM-76063] N80-18683

ABELES, F.
Project FIRES - Firefighters Integrated Response Equipment System. Volume 1: Program overview and summary, phase 1A
[NASA-CR-161399] N80-19795
Project FIRES - Firefighters Integrated Response Equipment System. Volume 2: Protective ensemble performance standards goals for firefighter protection, phase 1A
[NASA-CR-161400] N80-19796
Project FIRES - Firefighters Integrated Response Equipment System. Volume 3: Test and evaluation report, phase 1A
[NASA-CR-161401] N80-19797
Project FIRES - Firefighters Integrated Response Equipment System. Volume 4: Technology demonstration ensemble, phase 1A
[NASA-CR-161402] N80-19798
Project FIRES - Firefighters Integrated Response Equipment System. Volume 5: Prototype protective ensemble data package, phase 1A
[NASA-CR-161403] N80-19799

ADAIR, E. R.
Microwaves induce peripheral vasodilation in squirrel monkey
A80-27261

ADAMOVICH, B. A.
Study of physiological effects of weightlessness and artificial gravity in the flight of the biosatellite Cosmos-936
A80-25283

ADAMS, B. W.
Microwaves induce peripheral vasodilation in squirrel monkey
A80-27261

AHLERS, E.
Rat plasma and tissue lipids after a long-term space flight
N80-19773

AHLERS, J.
Rat plasma and tissue lipids after a long-term space flight
N80-19773

ALBERT, P.
On the audition coordinating cerebral activity
A80-27830

ALEKSEEV, V. V.
Some aspects of the organization of nocturnal sleep in normal and pathological states
A80-25837

ALLIK, IU. K.
Contact ring for registering the turning of the eyeball
A80-25839

ALYAKRINSKIY, B. S.
Scheduling work and rest periods during long-term space flights
N80-19756

AMIRAGOVA, M. G.
Hormone supply of the organism in prolonged emotional stress
[NASA-TM-76046] N80-18706

ANDREEV, V. L.
Some aspects of the organization of nocturnal sleep in normal and pathological states
A80-25837

ARLASHCHENKO, N. I.
Effect of sodium bicarbonate on reactivity and trophics of vestibular analyzer
N80-19769

B

BABAYEV, A.
Certain questions of the acclimatization of construction workers to the conditions of a subtropical climate
[NASA-TM-75728] N80-19787

BABINSKAYA, L. N.
Features of cholinergic cardia regulation under conditions of hypokinesia
[NASA-TM-76044] N80-18687

BALANESCU, F.
Some aspects concerning the dynamic evaluation of oxygen consumption in exercise tests
A80-28555

BALASUBRAMANIAN, R.
A conformational rationale for the origin of the mechanism of nucleicacid-directed protein synthesis of 'living' organisms
A80-26215

BALMUKHANOV, S. B.
The effects of hypoxia and hypercapnia on myocardial adenosine triphosphatase activity
A80-28350

BANKA, V. S.
Nuclear cardiology. I - Radionuclide angiographic assessment of left ventricular contraction: Uses, limitations and future directions. II - The role of myocardial perfusion imaging using thallium-201 in diagnosis of coronary heart disease
A80-25824

BARDHAN, J.
Body fluid compartments in humans during acute high-altitude exposure
A80-25893

BEILOCK, M. M.
Shuttle payload, manual vs. automated functions
[AAS 79-210] A80-28700

BEL, C.
Effect of the enzymatic inhibitor of Kunitz on the gastric lesions from reserpine, from phenylbutazone, from pyloric ligation and by restraint in the rat
[NASA-TM-76027] N80-18681

BERGLUND, T.
Prototype: Preliminary study on emergency breathing apparatus
[FOA-C-40103-C2] N80-18720

BERRY, G. L.
Modeling requirements for network simulation of human-machine systems
N80-18717

BERTULIS, A. V.
Spatial summation of monochromatic light in the visual system
A80-25828
Thresholds of recognition of various features of color stimuli
A80-25829

BIEMANN, K.
Some final conclusions and supporting experiments related to the search for organic compounds on the surface of Mars
A80-26390

BINIAURISHVILI, R. G.
Some aspects of the organization of nocturnal sleep in normal and pathological states
A80-25837

BIRK, J.
General methods to enable robots with vision to acquire, orient and transport workpieces
[PB80-106388] N80-19808

BLACKBURN, T. R.
Viking gas exchange reaction - Simulation on UV-irradiated manganese dioxide substrate
A80-26391

BODENHEIMER, M. M.
Nuclear cardiology. I - Radionuclide angiographic assessment of left ventricular contraction: Uses, limitations and future directions. II - The role of myocardial perfusion imaging using thallium-201 in diagnosis of coronary heart disease
A80-25824

BOGOMOLOV, V. V.
External respiration and acid-base balance of human blood during long-term antiorthostatic hypokinesia and in the recovery period
N80-19764

BOLSHAKOV, V. I.
Common properties of bacterial and visual rhodopsines - The conversion of optical energy into electric-potential difference
A80-25026

BOLYARSKAYA, V. A.
Features of cholinergic cardia regulation under conditions of hypokinesia
[NASA-TM-76044] N80-18687

BONDARENKO, Y. I.
Features of cholinergic cardia regulation under conditions of hypokinesia
[NASA-TM-76044] N80-18687

BRANTIGAN, J. W.
Investigation of flow rates of oxygen systems used in general aviation
A80-25899

BRISMIN, A. I.
Effectiveness of using thyrocalcitonin for the prevention of a calcium metabolic disorder in the mineralized tissues of rabbits with 30 days hypokinesia
[NASA-TM-75987] N80-19751

BRIZENDINE, M.
Detection of coronary artery disease - Comparison of exercise stress radionuclide angiocardiography and thallium stress perfusion scanning
A80-25822

BRIZZEE, K. R.
Motion sickness in the squirrel monkey
A80-25891

BROWNELL, T.
General methods to enable robots with vision to acquire, orient and transport workpieces
[PB80-106388] N80-19808

BRUMBERG, V. A.
Topochemical differences in the amount of RNA in the motoneurons of the spinal chord in hypoxia and hypokinesia
[NASA-TM-75994] N80-18689

BRUNO, A.
Project FIRES - Firefighters Integrated Response Equipment System. Volume 1: Program overview and summary, phase 1A
[NASA-CR-161399] N80-19795
Project FIRES - Firefighters Integrated Response Equipment System. Volume 2: Protective ensemble performance standards goals for firefighter protection, phase 1A
[NASA-CR-161400] N80-19796
Project FIRES - Firefighters Integrated Response Equipment System. Volume 3: Test and evaluation report, phase 1A
[NASA-CR-161401] N80-19797
Project FIRES - Firefighters Integrated Response Equipment System. Volume 4: Technology demonstration ensemble, phase 1A
[NASA-CR-161402] N80-19798
Project FIRES - Firefighters Integrated Response Equipment System. Volume 5: Prototype protective ensemble data package, phase 1A

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

AEROSPACE MEDICINE AND BIOLOGY

A CONTINUING BIBLIOGRAPHY WITH INDEXES

(Supplement 208)

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in June1980 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

Scientific and Technical Information Branch 1980
National Aeronautics and Space Administration
Washington, DC

NASA SP-7011 and its supplements are available from the National Technical Information Service (NTIS). Questions on the availability of the predecessor publications, Aerospace Medicine and Biology (Volumes I - XI) should be directed to NTIS.

This Supplement is available from the National Technical Information Service (NTIS), Springfield, Virginia 22161, at the price $7.00 domestic; $14.00 foreign.

INTRODUCTION

This Supplement to *Aerospace Medicine and Biology* (NASA SP-7011) lists 138 reports, articles and other documents announced during June 1980 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*. The first issue of the bibliography was published in July 1964; since that time, monthly supplements have been issued.

In its subject coverage, *Aerospace Medicine and Biology* concentrates on the biological, physiological, psychological, and environmental effects to which man is subjected during and following simulated or actual flight in the earth's atmosphere or in interplanetary space. References describing similar effects of biological organisms of lower order are also included. Such related topics as sanitary problems, pharmacology, toxicology, safety and survival, life support systems, exobiology, and personnel factors receive appropriate attention. In general, emphasis is placed on applied research, but references to fundamental studies and theoretical principles related to experimental development also qualify for inclusion.

Each entry in the bibliography consists of a bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections: *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* or *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Two indexes -- subject and personal author -- are included.

An annual index will be prepared at the end of the calendar year covering all documents listed in the 1980 Supplements.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A80-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche (1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N80-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $3.50 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements, excluding the annual cumulative index, is $65.00 domestic; $130.00 foreign. All questions relating to the subscriptions should be referred to NTIS.

EXTENDED DURATION ORBITER STUDY: CO2 REMOVAL AND WATER RECOVERY Final Report
R. D. Marshall, G. S. Ellis, F. H. Schubert, and R. A. Wynveen May 1979 91 p refs
(Contract NAS9-15218)
(NASA-CR-160317; LSI-ER-319-24) Avail: NTIS HC A05/MF A01 CSCL 06K

Two electrochemical depolarized carbon dioxide concentrator subsystems were evaluated against baseline lithium hydroxide for (1) the baseline orbiter when expanded to accommodate a crew of seven (mission option one), (2) an extended duration orbiter with a power extension package to reduce fuel cell expendables (mission option two), and (3) an extended duration orbiter with a full capability power module to eliminate fuel cell expendables (mission option three). The electrochemical depolarized carbon dioxide concentrator was also compared to the solid amine regenerable carbon dioxide removal concept. Water recovery is not required for Mission Option One since sufficient water is generated by the fuel cells. The vapor compression distillation subsystem was evaluated for mission option two and three only. Weight savings attainable using the vapor compression distillation subsystem for water recovery versus on-board water storage were determined. Combined carbon dioxide removal and water recovery was evaluated to determine the effect on regenerable carbon dioxide removal subsystem selection. R.E.S.

A80-12230 * **Soil stabilization by a prokaryotic desert crust - Implications for Precambrian land biota.** S. E. Campbell (Boston University, Boston, Mass.), *Origins of Life*, vol. 9, Sept. 1979, p. 335-348. 24 refs. NSF Grants No. GA-43391; No. EAR-76-84233; No. EAR-76-84233-A01; Grant No. NsG-7588.

The ecology of the cyanophyte-dominated stromatolitic mat forming the ground cover over desert areas of Utah and Colorado is investigated and implications for the formation of mature Precambrian soils are discussed. The activation of the growth of the two species of filamentous cyanophyte identified and the mobility of their multiple trichromes upon wetting are observed, accompanied by the production and deposition of a sheath capable of accreting and stabilizing sand and clay particles. The formation of calcium carbonate precipitates upon the repeated wetting and drying of desert crust is noted, and it is suggested that the desert crust community may appear in fossil calcrete deposits as lithified microscopic tubes and cellular remains of algal trichromes. The invasion of dry land by both marine and freshwater algae on the model of the desert crust is proposed to be responsible for the accumulation, stabilization and biogenic modification of mature Precambrian soils. A.L.W.

AEROSPACE MEDICINE AND BIOLOGY

A Continuing Bibliography (Suppl. 208)

JULY 1980

IAA ENTRIES

A80-29085 * Favorable effects of the antioxidants sodium and magnesium thiazolidine carboxylate on the vitality and life span of Drosophila and mice. J. Miquel (NASA, Ames Research Center, Moffett Field, Calif.) and A. C. Economos (San Jose State University, San Jose, Calif.). *Experimental Gerontology,* vol. 14, 1979, p. 279-285. 30 refs.

A80-29178 Compensation for distortion in eye-movement monitors. F. Karpala and M. E. Jernigan (Waterloo, University, Waterloo, Ontario, Canada). *IEEE Transactions on Biomedical Engineering,* vol. BME-27, Mar. 1980, p. 113-119. 12 refs. National Research Council of Canada Grants No. 079-6396; No. 079-6125.

A compensation scheme for the correction of both horizontal and vertical eye position measurements is developed. Based on the assumption that the distortion process can be modeled as piecewise linear, a new sample point structure is introduced. This structure permits both fixation-based and tracking-based sampling strategies. It also provides a convenient method for partitioning a display for estimation purposes. A minimum mean squared error estimate for the regional linear functions is derived. The problem of measurement assignment to linear regions is solved using a weighted distance metric. Performance is given both in terms of estimation error and the error remaining after correction for a test pattern. Results are presented for a specific example. (Author)

A80-29179 Significance of blood flow in calculations of temperature in laser irradiated tissue. A. J. Welch, E. H. Wissler (Texas, University, Austin, Tex.), and L. A. Priebe (Texas Instruments, Inc., Dallas, Tex.). *IEEE Transactions on Biomedical Engineering,* vol. BME-27, Mar. 1980, p. 164-166. 6 refs. Research supported by the University of Texas; Contract No. F41609-76-0605.

A dimensionless solution of the heat conduction equation for laser irradiation of tissue has been extended to include transport of heat owing to blood flow. The importance of the heat loss term is discussed in relation to the perfusion rate and exposure duration. (Author)

A80-29359 Use of double pulse holography for vibration analysis on a human ear in vivo (Einsatz der Doppelimpuls-Holografie für die Schwingungsanalyse am Trommelfell des lebenden Menschen). H. Kreitlow, M.-A. Beeck (Hannover, Technische Universität, Hannover, West Germany), and W. Fritze (HNO-Klinik, Vienna, Austria). In: Laser 79 opto-electronics; Proceedings of the Fourth Conference, Munich, West Germany, July 2-6, 1979. Guildford, Surrey, England, IPC Science and Technology Press, Ltd., 1979, p. 221-227. 10 refs. In German.

The paper describes the use of a giant-pulse ruby laser, a holographic interferometer, and an electronic control system to measure the vibrations of the human eardrum. Attention is given to the use of an otoscope with a built in fiber-optic cable which guides the object wave to the hologram plate by means of a built-in lens system. M.E.P.

A80-29421 The representation of colours in the cerebral cortex. S. Zeki (University College, London, England). *Nature,* vol. 284, Apr. 3, 1980, p. 412-418. 26 refs. Research supported by the Science Research Council.

The role of the cerebral cortex in color perception and the ways in which color is represented there are investigated. Wavelength response curves of isolated cells from the fourth visual areas of rhesus monkeys indicate that the cells can be selective for narrow parts of the visible spectrum (bandwidth of 10 to 50 nm) covering almost the entire visible spectrum, with clusterings at 480 nm (blue), 500 nm (green) and 620 nm (orange-red), and in the purple. Oblique penetrations of the visual cortex reveal the orderly grouping together of cells with particular color preferences. A multi-colored Mondrian display was then placed in the visual field so that only one square of the pattern covered the receptive field of a color-coded cell, and the response of the cell was monitored as a function of the wavelength of light illuminating the entire display. Cells are found to respond actively to their specific color only when illuminated by all three (red, blue and green) wavelengths. Cell responses are also shown to be correlated with the color of the display rather than the relative intensities of short-, middle-, and long-wavelength radiation reaching the eye, implying that for the single cell as well as in perception, the composition of light in terms of energy-wavelength relationships may be of little importance. A.L.W.

A80-29676 Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography, and Cardiovascular Dynamics, Univerza v Ljubljani, Ljubljana, Yugoslavia, March 20-22, 1978. Congress sponsored by the Research Community of Slovenia, Health Community of Slovenia, Univerza v Ljubljani, and Committee of Health of Slovenia. Edited by G. Juznic (Ljubljana, Univerza, Ljubljana, Yugoslavia). Basel, S. Karger AG (Bibliotheca Cardiologica, No. 37) 1979. 239 p. $84.50.

Papers are presented on noninvasive means of studying cardiovascular dynamics by the use of ballistocardiography, mechanocardiography sphygmocardiography, rheocardiography, echocardiography, nuclear medicine techniques, radar kymography, systolic time interval techniques and transfer functions. Specific topics include the history and present status of ballistocardiography, the past and present of kinetocardiography, the clinical application of carotid electrosphygmography, heart beat recording by ultralow frequency and direct body methods, echocardiography in the assessment of the severity of mitral stenois, the polycardiographic study of cardiac dynamics during work, the pulse contour method in the determination of cardiac output, the effects of fiber orientation on the modeling of ventricular power generation, and the dynamic characteristics of the thorax. A.L.W.

A80-29677 **Ballistocardiography - Past, present and future.** W. J. A. Goedhard (Amsterdam, Vrije Universiteit, Amsterdam, Netherlands). In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978. Basel, S. Karger AG, 1979, p. 27-45. 21 refs.

The physiological basis, techniques and possible applications of the noninvasive technique of ballistocardiography in its present state of development are discussed. Preliminary results of experiments investigating the relation of two-dimensional ballistocardiography to aortic flow rate show that the transfer function between them is not a constant under all circumstances, indicating that further research is required to determine the parameters influencing the ballistocardiography signal. Techniques for recording signals in one, two or three dimensions exist and allow investigations of various levels of complexity. The analysis of the signals obtained, however, has not been standardized, although the amplitude of IJ in acceleration ballistocardiography in the head-foot orientation and the comparison of traces obtained with those of a healthy subject by computerized cross-correlation analysis are possible approaches. Despite these problems, it is concluded that research on ballistocardiography should be continued due to its potential in the early diagnosis of coronary heart disease and in clinical medicine. A.L.W.

A80-29678 **Direct body ballistocardiography - A 25 year survey - Landmarks in its representation of cardiac dynamics.** N. J. Winer. In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978. Basel, S. Karger AG, 1979, p. 46-57; Discussion, p. 57. 13 refs.

The direct body BCG (Ballistocardiogram) has been shown to reflect various expressions of the known physiological principles of cardiac dynamics. Emphasis has been placed on the identification and characteristics of the individual segment rather than on gross pattern variability for proper BCG pattern evaluation. Its sensitivity in the detection of early myocardial infarction with particular attention to its initial HI forces has been described. The significance of the simple Master two-step test (double) in eliciting the amplification or deterioration of these forces as a measure of myocardial integrity has also been emphasized. With this proposed definitive direction, there is call for widely organized attempts to clarify its potential as an important adjuvant in the study of clinical heart disease. (Author)

A80-29679 **Kinetocardiography - Past and present.** W. H. Bancroft, Jr. (U.S. Veterans Administration Hospital, Birmingham, Ala.) In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978. Basel, S. Karger AG, 1979, p. 58-71; Discussion, p. 72. 10 refs.

Past research in and the present status of the noninvasive technique of kinetocardiography, which involves the recording of the absolute displacement of several points of the precordium, in the diagnosis of heart disease are discussed. Equipment used in the recording of kinetocardiograms is described, and a normal kinetocardiogram is presented. The evaluation of kinetocardiography data by computer processing is discussed, and it is noted that amplitude and time normalization make averaging of the curves obtained more meaningful for the comparison of normal and abnormal kinetocardiograms. It is shown that the technique can discriminate between various severities of coronary artery disease and can also be used to monitor changes in the same subject prior to and following coronary artery surgery. It is concluded that the most promising areas for the use of kinetocardiography appear to be the evaluation of coronary artery bypass surgery and the extent of dyskinesis, however support for research in this area must be continued. A.L.W.

A80-29680 **Clinical application of carotid electrosphygmography.** H. Chlebus (Akademia Medyczna, Warsaw, Poland). In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978. Basel, S. Karger AG, 1979, p. 73-82; Discussion, p. 82, 83. 10 refs.

Consideration is given to the clinical applications of sphygmography, the graphic measurement of the pulse. The history of the graphic representation of the pulse is briefly discussed, and the contour of the arterial pulse wave and its relation to the characteristics of blood flow and arterial distensibility are examined. Experimental studies of the application of carotid resonance electrosphygmography to the determination of arterial distensibility and the assessment of arterial degeneration are presented, including an evaluation of carotid arteriograms, aortic pulse wave velocity and the left ventricular systolic time intervals. It is reported that a significant correlation between pulse wave velocity as determined by X-ray aortography and quantitative sphygmographic data was found. It is concluded that carotid resonance electrosphygmography represents a useful noninvasive method for the quantitative evaluation of arterial damage, especially in the cases of atherosclerosis and hypertension. A.L.W.

A80-29681 **Genesis of the sphygmogram from the kinetocardiogram.** G. Juznic (Ljubljana, Univerza, Ljubljana, Yugoslavia). In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978. Basel, S. Karger AG, 1979, p. 84-107; Discussion, P. 107, 108. 39 refs. Research supported by the Boris Kidric Fund.

The relationship between the carotid sphygmogram and the kinetocardiogram is investigated in terms of the functional uniformity of the cardiovascular system. The displacements of the chest wall and carotid artery of 10 healthy young adults were determined using photoelectric and resonance receiver transducers placed on the thorax and the amplitude and time intervals at rest and under the influence of catechclamines were analyzed. Results demonstrate the genesis of the sphygmogram from the kinetogram by the propagation of the deformation initiated at the aorta to the apex, where it is reflected and directed to the carotid artery. It is also concluded that the measurement of reflection wave and pulse wave velocities can be used as a test of the reactivity of an individual's cardiovascular system to stress and thus indicate a predisposition to coronary disease. A.L.W.

A80-29682 **Sphygmographic assessment of arterial distensibility in patients at risk of degenerative arterial disease.** H. Chlebus, J. Waclawek and M. Ciswicka-Sznajderman (Akademia Medyczna, Warsaw, Poland). In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978. Basel, S. Karger AG, 1979, p. 154-158. 5 refs.

Evidence indicates that the pattern of central pulse waveform is related to the pulse wave velocity (PWV) and expresses the distensibility of the aorta and its large branches. Investigations have shown that carotid resonance electrosphygmograms (CRESGs) reflect true central arterial pressure oscillations; their features have been qualified as quantitative criteria of the functional assessment of the mechanical properties of the arteries. Vascular ageing, atherosclerosis, structural damage to the arterial wall in consequence of hypertension, and the elevated blood pressure itself, represent the most frequent causes of decreased arterial distensibility. The studies presented were carried out to evaluate the development of arterial degeneration and sclerosis in the course of primary hyperlipoproteinaemias and primary arterial hypertension. (Author)

A80-29683 **Comparative examination of the pulse of both right and left carotid arteries.** H. Chlebus and J. Raczynski

(Akademia Medyczna, Warsaw, Poland). In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978. Basel, S. Karger AG, 1979, p. 159-163.

Recent advances in sphygmography, in the registration, description, measurement and interpretation of the contour of the central arterial pulse wave, provides facilities for a wider clinical application of this noninvasive method to quantitative assessment of arterial dynamics. The abnormal features of carotid resonance electrosphygmograms have been defined as quantitative criteria of reduced arterial distensiblity. Deformation of the tracings may depend on the severity and extensiveness of degenerative lesions and on their distance from the point of examination. Simultaneous records of the pulse of both right and left carotid arteries would help to differentiate the influence of local and distant arterial lesions on the contour of the tracings. Remote influences might give rather similar, symmetric deformation of the contour of both arteriograms. (Author)

A80-29684 **Evaluation of the pulse contour method in beat-to-beat determination of the cardiac output in small laboratory animals.** S. Nikolic, D. Susic, and D. Kentera (Institute for Medical Research, Belgrade, Yugoslavia). In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978. Basel, S. Karger AG, 1979, p. 169-173. 7 refs.

A80-29685 **Influence of diastolic fibre orientation on the left ventricular power generation.** V. Starc (Ljubljana, Univerza, Ljubljana, Yugoslavia). In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978. Basel, S. Karger AG, 1979, p. 174-179. 9 refs.

A mathematical model of power generation in the left ventricle which takes into account myocardial muscle fiber orientations is presented. The model approximates the left ventricle as a thin spherical shell obeying the law of Laplace, with a myocardium composed of helically wound muscle fibers consisting of serially connected contractile elements of equal length and the shape of the ventricle remaining constant at various diastolic volumes. It thus implies that an increase in end-diastolic volume is accompanied by an increase in fiber length, as well as an alteration in the helix parameter and the density of contractile elements. Power generated by the heart wall is thus represented as a product of the average contractile element density, a form factor of the ventricle, and the power of a single contractile element. A.L.W.

A80-29686 **Dynamic characteristics of the thorax connected with the heart action.** G. Juznic, I. Emri, D. Peterec, and M. Prepadnik (Ljubljana, Univerza, Ljubljana, Yugoslavia). In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978.
Basel, S. Karger AG, 1979, p. 180-194; Discussion, p. 194. 23 refs. Research supported by the Boris Kidric Fund.

The dynamic characteristics of thoracic motion are investigated as functions of subject somatotypae and respiratory position in order to provide a basis for the quantitative use of noninvasive methods for studying cardiovascular functions. A reflex hammer was used to apply shocks with a force of 2 N to 88 costal and intercostal points of the thorax, and the resonance frequency, damping coefficient, stiffness constant extinction time and transfer functions of different parts of the thorax were determined on the basis of accelerometer and seismocardiophone observations. It is found that the leptosome has high damping and a short extinction time, while the athletic type has a high resonance frequency and a high stiffness constant and the pyknic type has the lowest damping, resonance frequency and stiffness constant and the highest oscillating time. The lowering of intrathoracic pressure is observed to lead to higher damping in the costal points and a higher resonance frequency and stiffness constant in the intercostal points. Transfer functions are shown to be greatest in the pyknic type and depend on respiratory position. It is concluded that the brief testing of thoracic dynamic characteristics will facilitate the quantitative use of noninvasive methods in the evaluation of cardiovascular function. A.L.W.

A80-29687 **Further observations on modelling of the cardiovascular function in the electrical model.** G. Juznic, D. Peterec, and A. Jagodic (Ljubljana, Univerza, Ljubljana, Yugoslavia). In: Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography and Cardiovascular Dynamics, Ljubljana, Yugoslavia, March 20-22, 1978.
Basel, S. Karger AG, 1979, p. 195-208. 17 refs. Research supported by the Boris Kidric Fund.

A80-29909 # **Investigation of transitional characteristics of the equilibrium preservation system (Issledovanie perekhodnykh kharakteristik sistemy sokhraneniia ravnovesiia).** G. V. Mamasakhlisov (Tbilisskii Gosudarstvennyi Universitet, Tiflis, Georgian SSR). *Akademiia Nauk Gruzinskoi SSR, Soobshcheniia,* vol. 96, Nov. 1979, p. 433-436. 7 refs. In Russian.

An investigation is presented of the transitional characteristics of the human equilibrium preservation system. The electromyographic, kinematic, and dynamic indices of the motor apparatus during the disturbance of the human vertical posture caused by the acceleration of the supporting platform are analyzed. It is shown that muscular responses to a disturbed vertical posture do not constitute a simple sequel to the extension reflex; the possible mechanisms are discussed with reference to a central program of equilibrium preservation. A.T.

A80-30342 **The identification of the 3-micron spectral feature in galactic infrared sources.** F. Hoyle and C. Wickramasinghe (University College, Cardiff, Wales). *Astrophysics and Space Science,* vol. 68, no. 2, Apr. 1980, p. 499-503. 8 refs.

It is shown that a 3-micron extinction feature in galactic infrared sources cannot be due to water-ice grains. Infrared spectra with a resolution of Delta lambda/lambda = 0.015 are in remarkably close agreement with the 2.5-4 micron extinction properties calculated for bacterial grains. (Author)

A80-30434 # **Cardiac output at high altitude (Rabota serdtsa v usloviiakh vysokogor'ia).** S. B. Daniiarov. Leningrad, Izdatel'stvo Medizina, 1979. 152 p. 313 refs. In Russian.

Contemporary literature concerning the functioning of the heart at high altitudes is reviewed. Attention is given to the hemodynamic indicators of heart function under conditions of hypoxic hypoxia, changes in the contractile activity of the heart at high altitude, the dynamics of left ventricular papillary muscle contraction during altitude adaptation, and changes in myocardial structure and metabolism under altitude-induced hypoxic hypoxia. Results of extensive experiments on the characterization of the injection function of the heart during altitude acclimatization are also analyzed. A.L.W.

A80-30455 # **Visual learning and interhemispherical interaction (Zritel'noe obuchenie i mezhpolusharivoe vzaimodeistvie).** M. A. Makashvili (Akademiia Nauk Gruzinskoi SSR, Institut Fiziologii, Tiflis, Georgian SSR). *Akademiia Nauk Gruzinskoi SSR, Soobshcheniia,* vol. 96, Dec. 1979, p. 685-688. 9 refs. In Russian.

An attempt was made to study whether the corpus callosium has an influence on the conditional reflex behavior of cats. The experiments were carried out with control cats and cats with midline dissection of the corpus callosium. Using diffuse-light-intensity and other more complex stimuli, it was found that interhemispherical interaction of the visual analysor is indispensible for perception and processing of visual information. V.P.

A80-30456 # **Changes in the rhythmicity of the cerebral bioelectric potentials of head-shielded rabbits subjected to roentgen irradiation of the body in the minimum lethal dose (Izmeneniia ritmiki biopotentsialov mozga krolikov pri rentgenovskom obluchenii tulovishcha v minimal'no smertel'noi doze v usloviiakh ekranirovaniia golovy).** G. V. Feigin (Akademiia Nauk Gruzinskoi SSR, Institut Fiziologii, Tiflis, Georgian SSR). *Akademiia Nauk Gruzinskoi SSR, Soobshcheniia,* vol. 96, Dec. 1979, p. 701-704. In Russian.

A80-30457 # **Fermentative activity of neutrophil leukocytes in rats under conditions of hypoxic hypoxia (Fermentativnaia aktivnost' neitrofil'nykh leikotsitov krys pri gipoksicheskoi gipoksii).** E. S. Chertkova (Akademiia Nauk Gruzinskoi SSR, Institut Eksperimental'noi Morfologii, Tiflis, Georgian SSR). *Akademiia Nauk Gruzinskoi SSR, Soobshcheniia,* vol. 96, Dec. 1979, p. 721-724. In Russian.

A80-30513 # **Medical research work onboard the Soyuz 30-Salyut 6 orbital laboratory (Badania medyczne w kompleksie orbitalnym 'Sojuz 30-Salut 6').** S. Baranski, R. Bloszczynski, M. Hermaszewski, J. Kubiczkowa, A. Piorko, R. Saganiak, Z. Sarol, F. Skibniewski, J. Stendera, and W. Walichnowski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 12, no. 4, 1979, p. 9-20. In Polish.

The paper deals with medical aspects of a spaceflight involving the Soviet cosmonaut Klimuk and his Polish crew member Hermaszewski. Studies of the cardiovascular system are described, placing emphasis on the tests carried out on the third day in space. The physical exercises, protective measures, and the nutrition and hygienic aspects of the space flight are discussed. V.P.

A80-30514 # **Procedures and facilities for studying the capacity for work of cosmonauts (Metoda i aparatura do badania zdolnosci wysilkowej kosmonautow).** S. Baranski, R. Bloszczynski, M. Hermaszewski, J. Kubiczkowa, A. Piorko, R. Saganiak, Z. Sarol, F. Skibniewski, J. Stendera, and W. Walichnowski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 12, no. 4, 1979, p. 21-42. In Polish.

The paper deals with tests carried out to check the performance level of the Polish astronaut Hermaszewski prior to and after a space flight. The tests were carried out by a newly developed procedure consisting of determining the quantity of work performed during periods of a few minutes under conditions of cardiovascular equilibrium, regulated by the feedback principle between the heart rate and the cycloergometer load. The block and circuit diagrams of the respective facilities are given and discussed. V.P.

A80-30515 # **Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6 (Zastosowanie kardiolidera do kontroli czynnosci serca kosmonauty podczas treningu fizycznego oraz w ubiorze podciznieniowym w stacji orbitalnej 'Salut 6').** S. Baranski, R. Bloszczynski, M. Hermaszewski, J. Kubiczkowa, A. Piorko, R. Saganiak, Z. Sarol, F. Skibniewski, J. Stendera, and W. Walichnowski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 12, no. 4, 1979, p. 43-50. In Polish.

The paper deals with tests carried out on the Polish cosmonaut Hermaszewski to study the influence of weightlessness on physical activity. An apparatus with threshold alarm devices ('cardioleader') developed to monitor the heart rate is described. V.P.

A80-30516 # **Electrogustometric studies in orbital flight (Badania elektrogustometryczne w locie orbitalnym).** S. Baranski, R. Bloszczynski, M. Hermaszewski, J. Kubiczkowa, A. Piorko, R. Saganiak, Z. Sarol, F. Skibniewski, J. Stendera, and W. Walichnowski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 12, no. 4, 1979, p. 51-60. 15 refs. In Polish.

The specifications of an electrogustometer adapted to operate in a space environment are given, along with the specifications of the set of electrodes. The block and digital circuit diagrams of the device are discussed. Some results of an investigation of the taste perception thresholds of a Polish cosmonaut, prior to and during space flight are examined. V.P.

A80-30517 # **Observation of the vestibular function during space flight (Obserwacja czynnosci narzadow przedsionkowych podczas lotu kosmicznego).** S. Baranski, R. Bloszczynski, M. Hermaszewski, J. Kubiczkowa, A. Piorko, R. Saganiak, Z. Sarol, F. Skibniewski, J. Stendera, and W. Walichnowski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 12, no. 4, 1979, p. 61-74. 23 refs. In Polish.

Equilibrium disturbances induced by zero gravity manifest themselves as vestibular disorders, motion sickness, and spatial illusions. In the present paper, these disorders are studied in the light of available findings on United States astronauts and some results of studies conducted on a Polish cosmonaut during and after a space flight. Some possible mechanisms of the space-induced disorders are examined. V.P.

A80-30518 # **Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission (Oznaczenie cisnienia czastkowego tlenu w tkance podskornej kosmonautow podczas lotu w stacji kosmicznej 'Salut 6').** S. Baranski, R. Bloszczynski, M. Hermaszewski, J. Kubiczkowa, A. Piorko, R. Saganiak, Z. Sarol, F. Skibniewski, J. Stendera, and W. Walichnowski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 12, no. 4, 1979, p. 75-80. In Polish.

A polarographic technique was used to measure the oxygen tension in subcutaneous tissue of the forearm of cosmonaut Hermaszewski prior to, after, and on the fourth day of a space mission. A drop in the oxygen exchange rate in the peripheral tissues during weightlessness was observed. The mechanisms of this change are studied, taking into consideration the blood distribution in the organism and microcirculation disorders reflected by a decreased blood flow rate in arterial-venous junctions. V.P.

A80-30520 # **The psychological experiments 'Self-interrogation' and 'Relaxation' (Eksperymenty psychologiczne 'Samoocena' i 'Relaks').** S. Baranski, R. Bloszczynski, M. Hermaszewski, J. Kubiczkowa, A. Piorko, R. Saganiak, Z. Sarol, F. Skibniewski, J. Stendera, and W. Walichnowski (Wojskowy Instytut Medycyny Lotniczej, Warsaw, Poland). *Postepy Astronautyki,* vol. 12, no. 4, 1979, p. 85-101. 11 refs. In Polish.

The paper deals with physiological tests performed on cosmonaut Hermaszewski to evaluate his ability to function in space and his adaptation to the space environment. His ability to cope with sensory and social deprivation, psychological stress, and other space factors is attributed to his excellent physical, functional, and emotional state, the comradeship with his Soviet crew member, the motivation of performing difficult but honorable functions, and last but not least to thorough preflight training in which a special recreation program, termed Relaxation, played an important part. V.P.

A80-30673 **MTF of the defocused optical system of the human eye for incoherent monochromatic light.** L. J. Bour (Utrecht, Rijksuniversiteit, Utrecht, Netherlands). *Optical Society of America, Journal,* vol. 70, Mar. 1980, p. 321-328. 19 refs. Research supported by the Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek.

A psychophysical method has been used to measure the modulation transfer function (MTF) of the defocused optical system of the human eye for incoherent monochromatic light (514 nm) and for various pupil diameters. The results have been compared with theoretical calculations based on aberration coefficients found previously. MTF's have been computed for white light with the help of the measurements obtained for monochromatic light. (Author)

A80-30674 **Flicker-induced asymmetries in border enhancement and the distinction between brightness and darkness systems.** A. Remole (Waterloo, University, Waterloo, Ontario, Canada). *Optical Society of America, Journal,* vol. 70, Mar. 1980, p. 329-334. 21 refs. Natural Sciences and Engineering Research Council of Canada Grant No. A-9951.

Border enhancement is observed in a flickering bright-dark field. It is found that both the dark and the bright portions of the enhanced region increase in extent from the border during certain flicker frequencies, but not symmetrically about the border. This asymmetry is described by plotting the ratio of the dark and bright enhanced regions against stimulus frequency. The ratio fluctuates with frequency, the amplitude of the fluctuations being greatest at low frequencies. The foveal region stimulated by the border has some effect on the ratio functions. They cannot be mimicked by ratios obtained from enhancement responses to low and high luminances on either the dark or bright side of the border. It is suggested that these flicker-induced asymmetries are best understood in the context of separate neural systems for the perception of darkness and brightness. (Author)

A80-30813 **A psychoacoustic study of impulsive helicopter noise (Etude psycho-acoustique des bruits impulsifs d'hélicoptères).** A. Damongeot (Société Nationale Industrielle Aérospatiale, Marignane, Bouches-du-Rhône, France). *(Colloque Acoustique-Aérodynamique, 6th, Paris, France, May 29-31, 1978.) Revue d'Acoustique,* vol. 12, no. 48, 1979, p. 60-69. 7 refs. In French. Research sponsored by the Direction Technique des Constructions Aéronautiques and Ministère de la Culture et de l'Environnement.

The degree of annoyance caused by the intensity and impulsiveness of impulsive helicopter noise is investigated. Pairwise comparisons of the relative annoyance provoked by an identical impulsive helicopter noise and various intensities of a nonimpulsive helicopter noise were made by 20 juries comprising a total of 116 subjects. Results indicate that the units presently in use for quantifying annoyance (dBA, TPNdB, PNdB and EPNdB) do not completely represent the levels brought about by impulsive noise; these values must be corrected upwards by up to 6 units to reach the equivalent effects of continuous noise. An impulsivity indicator derived from the variance of the sound pressure is then introduced as a correcting factor in the establishment of helicopter noise certification standards, and it is shown to account well for the observed results. A.L.W.

A80-30815 **The psychoacoustic effects of aircraft noise on sleep - An in situ study (Les effets psycho-acoustiques des bruits d'avion sur le sommeil - Etude in situ).** M. Vallet, F. Simonnet (Institut de Recherche des Transports, Arcueil, Val-de-Marne, France), and J. M. Gagneux (Association de Recherche, Pollution, Environnement et Nuissance, France). *(Colloque Acoustique-Aérodynamique, 6th, Paris, France, May 29-31, 1978.) Revue d'Acoustique,* vol. 12, no. 48, 1979, p. 79-81. 7 refs. In French.

The quality of sleep of persons living near an airport which is open at night is investigated, and results of the in situ studies are compared with those obtained in the laboratory reviewed by Lukas (1975) and Griefahn (1976). The sleep patterns of 40 men between the ages of 20 and 55 living in zones of various noise exposure surrounding Roissy airport for a year were monitored during four consecutive nights by EEG, EOG, EMG and EKG. The frequencies of awakenings and sleep-stage variations in the presence of aircraft noise observed in situ are found to be lower than in the reported laboratory tests, indicating an adaptation to the noise in habituated sleepers, and to increase very slowly with increasing noise level. Responses to aircraft noise are also observed to depend on the number of flights on a given night, with reaction rate increasing to a level where it stabilizes, however even at the lowest noise levels, no zero-responses were observed. A.L.W.

A80-30854 **An investigation of the effects of impulse noise exposure on man - Impulse noise with a relatively low peak level.** K. Yamamura, S. Hiramatsu, T. Hikichi, S. Hiramatsu (Sapporo Medical College, Sapporo, Japan), and K. Aoshima (Toyama Medical and Pharmaceutical University, Toyama, Japan). *European Journal of Applied Physiology,* vol. 43, Mar. 1980, p. 135-142. 14 refs. Research supported by the Environmental Agency of Japan.

The effects of impulse noise of a relatively low peak level were examined to develop damage risk criteria for impulse noise. Eight to 13 normal male students (aged 20-24 years) were exposed to impulse noise. Peak levels of impulse noise were 100 dB and 105 dB, B-duration of impulse noise being 10 ms, 50 ms, and 100 ms, and the repetition rates of impulse noise were 3 per 1 s and 1 per 3 s. Exposure time was 8 h. Exposure conditions of long B-duration induced greater TTS2 than those of short B-duration (P less than 0.05). Impulse noise exposure at a high peak level induced slightly larger TTS2 than that at a low peak level. TTS2 increased proportionally to the logarithm of the amount of impulse noise. Exposure to impulse noise induced smaller TTS2 than that of steady-state noise of an equal energy level. Exposure to large amounts of impulse noise induced slightly greater urinary 17 OHCS levels than small amounts of impulse noise, and exposure to impulse noise induced smaller urinary 17 OHCS levels than steady-state noise of an equal energy level. The decreasing effect of the acoustic reflex on the acoustic energy of impulse noise was considered to be the reason for the results obtained. (Author)

A80-30873 **Diagnostic accuracy of the conventional 12-lead and the orthogonal Frank-lead electrocardiograms in detection of myocardial infarctions with classifiers using continuous and Bernoulli features.** U. Jain and P. M. Rautaharju (Dalhousie University, Halifax, Canada). *Journal of Electrocardiology,* vol. 13, Apr. 1980, p. 159-166. 22 refs. Research supported by the Medical Research Council of Canada and Nova Scotia Heart Foundation; Department of National Health and Welfare of Canada Grants No. 603-1052-45; No. 6603-20-10-45.

The present investigation evaluates the possibility of using a decision-theoretic classifier and a set of ECG features which are discretized to obtain Bernoulli variables, and compares the diagnostic accuracy of the 12-lead and Frank-lead ECG in detecting myocardial infarctions. The branch-and-bound algorithm, the sequential forward selection and backward rejection procedures are used for selecting the best subsets of Bernoulli and continuous features out of the primary set of features measured from the 12-lead and Frank-lead ECG. The classification accuracy of Bernoulli and continuous features is estimated in a test library composed of ECGs of 237 subjects with old myocardial infarcts and 299 subjects without infarction. It is concluded that while Bernoulli variables perform as well as or better than continuous variables over a wide range of sensitivity and specificity, continuous features appear to yield a higher diagnostic accuracy when a high level of specificity is required. The information content of the 12-lead ECG appears as good as or better than that of the Frank-lead ECG. S.D.

A80-31075 # **Role of thyroxin in the thermoregulation of albino rats following cold acclimation (O roli tiroksina v termoreguliatsii belykh krys posle aklimatsii k kholodu).** V. I. Sobolev (Donetskii Gosudarstvennyi Universitet, Donetsk, Ukrainian SSR). *Fiziologicheskii Zhurnal SSSR,* vol. 66, Feb. 1980, p. 268-273. 14 refs. In Russian.

A80-31446 **Influence of microwave irradiation on the resistance of rats to transversely applied g forces.** V. S. Tikhonchuk. *(Kosmicheskie Issledovaniia,* vol. 17, July-Aug. 1979, p. 636-638.) *Cosmic Research,* vol. 17, no. 4, Jan. 1980, p. 525-527. 6 refs. Translation.

A80-31480 # **Vibration of the basilar membrane in the mammalian cochlea (O kolebanii baziliarnoi membrany vo vnutrennem ukhe mlekopitaiushchikh).** V. M. Babich and S. M. Novoselova.

In: Mathematical problems of the theory of wave propagation. 10. Leningrad, Izdatel'stvo Nauka, 1979, p. 54-62. 32 refs. In Russian.

The cochlea is modeled as a hydromechanical waveguide with smoothly varying properties along whose midsection an elastic anisotropic plate - the basilar membrane - is located. A WKB type method is used to investigate the displacement of the membrane. The results are presented in graphical form and discussed in detail. B.J.

A80-31584 # **Liquid conditioned suit and its use in alleviating heat stress in military flying.** P. K. Bannerjee, M. K. Vyawahare, C. A. Verghese, and J. S. Sant (Indian Air Force, Institute of Aviation Medicine, Bangalore, India). *Aviation Medicine,* vol. 23, Dec. 1979, p. 79-84. 11 refs.

Efforts are now being made to develop suitable cooling packs for aircrews, which will be compatible with the space, weight and power provision of an aircraft. The paper deals with two such systems: (1) Model 1, a laboratory model of freon package; and (2) Model 2, a miniaturized insulated ice package. The objective was to study their suitability in alleviating the heat load that is commonly prevalent in low-level flying in tropical summer. Nine healthy male volunteers participated in the study. The first model of the refrigerant pack for laboratory trials on liquid-conditioned suit derives its cooling from the conventional freon refrigeration; the second model derives its cooling from fusion of ice and gradual temperature rise of water thus formed. The effectiveness of these two systems is evaluated in terms of reduction in physiological strain. S.D.

A80-31585 # **An evaluation protocol for fighter aircrew with non specific ST-T abnormalities.** M. M. Singh, K. Rai, S. K. Adaval (Indian Air Force, Institute of Aviation Medicine, Bangalore, India), M. Akhtar (Army Hospital, Delhi, India), and G. N. Kunzru. *Aviation Medicine,* vol. 23, Dec. 1979, p. 85-91. 26 refs. Research supported by the Indian Air Force. AFMRC Project 763/75.

Twenty aircrew members with asymptomatic nonspecific ECG abnormality were selected for this study. A detailed evaluation of such 'asymptomatic nonspecific ECG abnormality' with various stress tests available at 1 AM was carried out in order to establish and outline a standard program of evaluation for early diagnosis and disposal. ECGs were recorded at rest, in lying and standing positions, after Masters Double Two-step exercise, during and after submaximal and maximal treadmill exercise, during and after hyperventilation and Valsalva's maneuver, under hypoxia at rest and after Masters Double Two-step exercise, during tilt table studies and during/after +Gz stress. All the electrocardiographic studies were repeated after administration of propanolol as a beta blocker. S.D.

A80-31586 # **Aeromedical and physiologic aspects of fighter pilot selection and performance - Theoretical considerations.** J. E. Whinnery (USAF, School of Aerospace Medicine, Brooks AFB, Tex.). *Aviation Medicine,* vol. 23, Dec. 1979, p. 92-95. 16 refs.

Theoretical considerations are discussed regarding aeromedical and physiological aspects of fighter pilot selection and performance. The discussion focuses on definition of aerial combat stress, requisite for physical conditioning, and future trends. The recently introduced high-performance fighter aircraft produce a complex multistress environment with severe physiologic and psychologic demands placed on aircraft pilots. The etiology of loss of consciousness and loss of vision is due to lack of cerebral and retinal perfusion, respectively, resulting from the head-to-foot force of +Gz with a corresponding increased blood pooling in the lower extremities. Any condition which might predispose a pilot to an increased susceptibility to unconsciousness should be avoided. A final aspect of aircrewmen moving into a new higher stress environment is the possibility of exposure to a potentially hazardous environment. S.D.

A80-31588 # **Effects of alcohol on aircrew performance - A field study.** K. S. Soodan (Indian Air Force, Institute of Aviation Medicine, Bangalore, India). *Aviation Medicine,* vol. 23, Dec. 1979, p. 103-106.

Alcohol is known to affect the performance of individuals. The performance of 16 pilots has been studied 5 hr and 7 hr after the consumption of 3 oz of alcoholic drink on simulated flying task. The study revealed a decrease in the performance of the aircrew at the 5-hr stage. A decrement in performance of a lesser degree was present even at the 7-hr stage. (Author)

A80-31589 # **Dynamic vision under vibration and changes with curvature of transparencies.** M. K. Vyawahare, J. S. Sant, D. T. Shakunthala, and C. A. Verghese (Indian Air Force, Institute of Aviation Medicine, Bangalore, India). *Aviation Medicine,* vol. 23, Dec. 1979, p. 107-110. 14 refs.

Deterioration in dynamic visual acuity under low frequency vibration has been studied. Objects, moving with varying linear speeds in the range of 60-120 cm/sec. and having fixed contrast with the background, were presented to subjects. Threshold size of detection of moving objects show a significant change under vibration. Distortion and curvature in the viewing shield enhances the threshold size of objects. It is observed that low frequency vibration produces visual acuity decrement for static as well as dynamic objects. (Author)

A80-31590 # **Aeromedical evaluation of aircraft accidents - Human engineering aspects.** P. C. Sharda (Indian Air Force, Medical Services, New Delhi, India). *Aviation Medicine,* vol. 23, Dec. 1979, p. 113, 114.

Statistics continue to show an increased incidence of serious aircraft accidents where the cause has been attributed to human factors. In this paper, a few cases are selected to highlight various human engineering aspects probably operative in aircraft accident and injury causation. The discussion covers design deficiencies, modification and nonstandard aircraft, maintenance lapse, operational error, inadequacy in personal safety equipment, and aircrew-aircraft incompatibility in terms of anthropometric limitations. It is clear that certain factors do exist, but their respective role in accident or injury causation can only be conjectured. S.D.

A80-31591 # **Psycho-social aspects of aircraft accidents.** V. Kumar (AFCME, New Delhi, India). *Aviation Medicine,* vol. 23, Dec. 1979, p. 115-118. 9 refs.

The cause of human error in an aircraft accident can be determined by investigating the psychosocial aspects of the individual responsible for the accident. The paper discusses psychosocial factors relative to attention, emotional stability, motivation, experience, skill, self-esteem, fatigue, psychological stress and aircraft pilot, accident proneness, attitudes and flying, habit interference, crew behavior, man in a group, alcohol aftereffects and flying, as well as maintenance crew and air traffic control staff. Recommendations are made for reliably determining the cause of human error in an aircraft accident and for making psychosocial studies very meaningful. S.D.

A80-31592 # **Injury dynamics in aircraft accident.** R. Singh (Indian Air Force, Institute of Aviation Medicine, Bangalore, India). *Aviation Medicine,* vol. 23, Dec. 1979, p. 119-124. 8 refs.

The impact forces encountered in aircraft accidents are generally abrupt accelerations of short duration, usually less than 1 sec., thereby causing mechanical damage that results in injuries to aircraft occupants. The discussion covers human tolerance to abrupt accelerations, along with aircraft crash injuries and dynamics. The basic causes and mechanism of the injuries are discussed. For quick retrieval of information to correlate injuries with aircraft environment during crash, a supplementary form is suggested to be incorporated into the current Form MS 1956. S.D.

A80-31633 # **Determination and elimination of low-frequency zero-level oscillations of an EKG during automated processing (Otsenka i ustvanenie nizkochastotnykh kolebanii nulevogo urovnia EKG v protsesse avtomaticheskoi obrabotki).** Iu. V. Paramonov and N. E. Afanasenko (Akademiia Nauk SSSR, Institut Kibernetiki, Kiev, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 45, 1979, p. 32-39. 5 refs. In Russian.

An algorithm for eliminating zero-level noise oscillations in the processing of EKG data is presented. The procedure involves the use of the least squares method within the limit of a given P-T cycle. The effectiveness of the method is evaluated, and preliminary results of processing are discussed. B.J.

A80-31634 # **Complex statistical analysis of the detection of the QRS complex (Kompleksnaia statisticheskaia otsenka obnaruzheniia kompleksa QRS).** S. M. Makeev (Akademiia Nauk Ukrainskoi SSR, Institut Kibernetiki, Kiev, Ukrainian SSR) and A. G. Taranenko (Kievskii Institut Inzhenerov Grazhdanskoi Aviatsii, Kiev, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 45, 1979, p. 54-57. 7 refs. In Russian.

An algorithm for the recognition of the QRS complex and the R branch in the processing of EKG data is developed. Results of experimental verification of the algorithm are presented, and the computer implementation of the algorithm is discussed with reference to the automated processing of clinical EKG data. B.J.

A80-31635 # **Measurement of local indices of operator performance in the tracking mode (Izmerenie lokal'nykh pokazatelei kachestva deiatel'nosti operatora v rezhime slezheniia).** V. A. Chernomorets (Akademiia Nauk Ukrainskoi SSR, Institut Kibernetiki, Kiev, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 45, 1979, p. 65-70. In Russian.

The paper examines methods for describing operator behavior on the basis of empirical data concerning operator performance, with particular reference given to compensatory tracking operations. A method to increase the resolution of performance measurement methods is described, and attention is given to problems associated with the digitization of analog data. B.J.

A80-31636 # **Recognition of EKG structural elements in an automated complex (Raspoznovanie strukturnykh elementov elektrokardiogrammy v avtomatizirovannom komplekse).** E. M. Maslova and T. A. Rabosh (Ministerstvo Zdravookhraneniia Ukrainskoi SSR, Vinnitskii Meditsinskii Institut, Vinnitsa, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 45, 1979, p. 88-90. In Russian.

A80-31638 # **Design principles for a system of automated processing of cardiological data on the M-6000 computer (Nekotorye printsipy postroeniia kompleksa avtomatizirovannoi obrabotki kardiologicheskoi informatsii spomoshch'iu EVM M-6000).** T. A. Volkhonskaia, E. M. Maslova, A. K. Galitskii, and M. A. Chekailo (Akademiia Nauk Ukrainskoi SSR, Institut Kibernetiki, Kiev, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 45, 1979, p. 91-94. In Russian.

A80-31639 # **Design characteristics of an imitation system for the study of physiological processes on a digital computer (Osobennosti postroeniia imitatsionnoi sistemy dlia issledovaniia na ETsVM fiziologicheskikh protsessov).** Iu. N. Onopchuk (Akademiia Nauk Ukrainskoi SSR, Institut Kibernetiki, Kiev, Ukrainian SSR). *Kibernetika i Vychislitel'naia Tekhnika,* no. 45, 1979, p. 103-106. 7 refs. In Russian.

The use of pseudo-observations to develop imitation software for the digital-computer investigation of physiological processes is examined; this limitation procedure can be used to study the dynamics of gas transfer in the human body and in sea-animal organisms. The development of imitation software is considered with reference to the determination of input data and the selection of numerical procedures and integration step. B.J.

A80-31800 * **Influence of auditory fatigue on masked speech intelligibility.** D. E. Parker, W. L. Martens, and P. A. Johnston (Miami University, Oxford, Ohio). *Acoustical Society of America, Journal,* vol. 67, Apr. 1980, p. 1392, 1393. Research supported by Miami University; Contracts No. F33615-75-C-5029; No. NAS9-14258.

Intelligibility of PB word lists embedded in simultaneous masking noise was evaluated before and after fatiguing-noise exposure, which was determined by observing the number of words correctly repeated during a shadowing task. Both the speech signal and the masking noise were filtered to a 2825-3185-Hz band. Masking-noise leves were varied from 0- to 90-dB SL. Fatigue was produced by a 1500-3000-Hz octave band of noise at 115 dB (re 20 micron-Pa) presented continuously for 5 min. The results of three experiments indicated that speed intelligibility was reduced when the speech was presented against a background of silence but that the fatiguing-noise exposure had no effect on intelligibility when the speech was made more intense and embedded in masking noise of 40-90-dB SL. These observations are interpreted by considering the recruitment produced by fatigue and masking noise. (Author)

A80-32216 # **Express-diagnostic criteria of the cardiohemodynamic efficiency of juvenile athletes (Ekspress-diagnosticheskie kriterii kardio-gemodinamicheskoi proizvoditel'nosti u iunykh sportsmenov).** V. S. Shaginian and V. P. Kovtun (Detskii Vrachebno-Fizkul'turnyi Dispanser, USSR). *Akademiia Nauk Gruzinskoi SSR, Soobshcheniia,* vol. 96, Oct. 1979, p. 185-188. In Russian.

A80-32230 # **Influence of longitudinal accelerations on fluid-electrolyte metabolism and renal function under conditions of immersion (Vliianie prodol'nykh peregruzok na vodno-solevoi obmen i funktsiiu pochek v usloviiakh immersii).** E. B. Shul'zhenko, A. I. Grigor'ev, V. B. Noskov, B. R. Dorokhova, and E. A. Aleksandrova. *Fiziologiia Cheloveka,* vol. 6, Mar.-Apr. 1980, p. 280-285. 16 refs. In Russian.

Three-day immersion experiments are carried out on ten healthy male individuals (25-30 yr) subjected to low-magnitude +Gz accelerations. It is found that a stay in immersion produces in a normal man an increase in diuresis and excretion of osmotically active substances including sodium. This process is most pronounced in the first day of immersion. Administration of isotonic NaCl solution causes accelerated elimination of fluid, sodium, osmotically active substances, and potassium; this should be considered a homeostatic reaction intended to recover the adequately decreased volume of intravascular fluid. Head-foot accelerations of low magnitude prevent the increase of diuresis and the excretion of electrolytes on the second and third days of the immersion period. S.D.

A80-32231 # **The circadian rhythm of aerobic efficiency (Sutochnyi ritm aerobnoi proizvoditel'mosti).** S. G. Krivoshchekov, V. F. Osipov, and Iu. A. Vlasov (Akademiia Meditsinskikh Nauk SSSR, Novosibirsk, USSR). *Fiziologiia Cheloveka,* vol. 6, Mar.-Apr. 1980, p. 310-316. 14 refs. In Russian.

Experiments were conducted on young healthy male subjects who performed various types of physical exercise. The objective was to evaluate the circadian rhythms of aerobic efficiency in man, along with the characteristics of physiological support of working capacity at different times of the day. Maximum oxygen uptake and 'pulse oxygen threshold' (POT) are considered. Possible causes for the circadian fluctuations of the POT are examined. It appears that during the circadian organization of the whole organism, the circadian rhythm of the cardiorespiratory-system functions assures during daytime an optimal readiness to active work; during nighttime the functional systems procure the conditions for the best course of reconstructive anabolic processes. S.D.

A80-32232 # **Effect of gas-mixture density on the performance of the respiratory system (Vliianie plotnostei gazovykh smesei na rabotu dykhatel'nogo apparata).** I. S. Breslav and E. L. Kalacheva

(Akademiia Nauk SSSR, Institut Fiziologii, Leningrad, USSR). *Fiziologiia Cheloveka,* vol. 6, Mar.-Apr. 1980, p. 317-322. 20 refs. In Russian.

Experiments on healthy individuals reveal that during free breathing of gas mixtures of varying density (He-O2, SF6-02), man chooses such a regime of pulmonary ventilation which ensures the optimization of the relation between elastic and inelastic resistance to respiration without a significant change in the total performance of the respiratory system. During forced breathing, the gas-mixture density affects the energy cost of ventilation. When breathing a gas mixture of higher density than that of air, the functional reserves of the resiratory system are limited. S.D.

A80-32233 # **Functional state of the cardiovascular system following a three-day immersion and prophylactic rotations in a small-radius centrifuge (Funktsional'noe sostoianie serdechno-sosudistoi sistemy posle 3-sutochnoi immersii i profilakticheskikh vrashchenii na tsentrifuge korotkogo radiusa).** I. F. Vil'-Vil'iams and E. B. Shul'zhenko. *Fiziologiia Cheloveka,* vol. 6, Mar.-Apr. 1980, p. 323-327. 9 refs. In Russian.

An experimental study was carried out on volunteer healthy male individuals to evaluate the reaction of the circulatory system after mimicking the effect of detraining by water immersion and combining immersion with prophylactic gravitational accelerations in a small-radius centrifuge. The results obtained demonstrated the possibility of using periodic gravitational accelerations in a small-radius centrifuge over the range 0.8-1.6 Gz (at the 'foot' level) for reducing the effects of determining of the cardiovascular system, which were developed during immersion, and for maintaining the reserve capabilities of the circulatory system. S.D.

A80-32234 # **Sleep pattern variation during adaptation to high-altitude hypoxia (Izmenenie sna v protsesse adaptatsii k vysotnoi gipoksii).** V. B. Malkin, V. P. Danilin, and N. F. Landukhova. *Fiziologiia Cheloveka,* vol. 6, Mar.-Apr. 1980, p. 341-347. 18 refs. In Russian.

During three successive nights nine male subjects were placed in an altitude test chamber (4200 m) right before the initial stage of sleep. Regular changes in the nighttime sleep phase structure were observed. These changes were reduced total sleep duration and reduced number of completed sleep cycles. The observations indicated extended Stage I duration, slow-sleep shortening, and distinct deprivation of fast sleep. Sleep normalization was observed during the second and particularly the third night. S.D.

A80-32235 # **Investigation of the predictive value of electronystagmograms /ENGs/ in professional-selection vestibulometry (Issledovanie prognosticheskoi tsennosti elektronistagmogramm /ENG/ pri vestibuliarnom profotbore).** B. I. Poliakov, M. I. Serebrennikov, Iu. V. Lysenko, Iu. P. Ozerov, and B. V. Permiakov. *Fiziologiia Cheloveka,* vol. 6, Mar.-Apr. 1980, p. 366-368. 9 refs. In Russian.

A rotating-chair test procedure is proposed whereby healthy male individuals experienced nystagmus under specified rotary accelerations in a rotary chair. It is found that the intensity of nystagmus is higher for persons with low vestibular-autonomic stability level (VSL) than for persons with high VSL. The dynamics of horizontal-nystagmus disappearance is a distinct indicator for detecting persons with low and high VSL. Conditions for recognizing persons prone to VSL are determined. S.D.

A80-32305 **A theoretical basis for microwave and RF field effects on excitable cellular membranes.** C. A. Cain (Illinois, University, Urbana, Ill.). *IEEE Transactions on Microwave Theory and Techniques,* vol. MTT-28, Feb. 1980, p. 142-147. 25 refs.

A model of a mechanism for nonthermal interaction of RF or microwave fields with excitable cellular membranes is presented. It may be possible for an oscillating component of membrane potential to change the conductance of the membrane to all ion species which transverse voltage-dependent membrane channels. Some specific effects on squid giant axon predicted by the model are discussed. (Author)

A80-32413 **Suprathreshold processing of complex visual stimuli - Evidence for linearity in contrast perception.** A. P. Ginsburg, M. W. Cannon (USAF, Aviation Vision Laboratory, Wright-Patterson AFB, Ohio), and M. A. Nelson (Systems Research Laboratories, Inc., Dayton, Ohio). *Science,* vol. 208, May 9, 1980, p. 619-621. 18 refs.

Magnitude estimation experiments show that perceived contrast for both sine and square waves is a linear function of stimulus contrast. The suprathreshold sine:square ratio required for equal perceived contrast derived from these data was verified by contrast matching experiments. These findings imply a high degree of linearity in suprathreshold visual processing of contrast. (Author)

A80-32414 **Saccadic eye movements and body sway.** K. D. White (Florida, University, Gainesville, Fla.), R. B. Post, and H. W. Leibowitz (Pennsylvania State University, University Park, Pa.). *Science,* vol. 208, May 9, 1980, p. 621-623. 18 refs. Research supported by the Alexander von Humboldt-Stiftung; Deutsche Forschungsgemeinschaft Contract No. SFB-70; Grant No. PHS-MH-08061.

Different conditions of moving retinal images show differential influences on postural stability. A surrounding pattern moved during steady fixation increases body sway, but similar image motions generated by voluntary saccades do not. Mechanisms for postural control do not respond to visual feedback during saccades. Analogous principles in saccadic suppression and space constancy are discussed. (Author)

A80-32576 **Air safety in 1978 from the medical point of view (Point de vue médical sur la sécurité aérienne en 1978).** J. Timbal (Laboratoire Central de Biologie Aéronautique, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 1st Quarter, 1979, p. 12-14. In French.

Medical aspects of the prevention of aircraft accidents are discussed. A brief review of aircraft accident rates in the past 20 years is presented which points out that this rate has been decreasing exponentially towards an asymptotic level, with the proportion of human responsibility remaining fairly constant. The selection, medical and psychological surveillance and training of flight personnel, aircraft accident investigation, emergency equipment improvements and the design of future aircraft are discussed as means of improving air safety. It is concluded that the most important of these means will be the medical training of flight personnel and the intensification of accident investigations, while close attention must also be given to the design of future aircraft equipment. A.L.W.

A80-32577 **The investigator confronted with medical problems in technical investigations of aircraft accidents (L'enquêteur confronté aux problèmes médicaux lors des investigations techniques sur les accidents d'avions).** M. Vigier. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 1st Quarter, 1979, p. 15-19. In French.

The close cooperation necessary between technical and medical investigators of aircraft accidents is discussed from the point of view of the technical investigator. The general framework within which aircraft accident investigations are conducted is reviewed, with attention given to the requirements of the International Civil Aviation Organization and the provisions of the French government. The responsibilities of the investigator with respect to the determination of events and conditions before, during and after the accident are outlined, and the role of medical personnel in the analysis of crew medical histories and the sequence of events leading to and during the accident and the examination of survivors and victims is emphasized. Finally, recommendations concerning the modification of international and national regulations and present autopsy procedures, medical instruction, equipment cases and accident report formats to reflect the necessary medical-technical cooperation are presented. A.L.W.

A80-32578 The importance of toxicological studies in aircraft accidents (Intérêt des études toxicologiques dans les accidents aériens). P. E. Picart and J. P. Delcroix (Centre de Recherches de Médecine Aéronautique, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 1st Quarter, 1979, p. 20-23. 11 refs. In French.

The application of toxicological techniques to the theoretical reconstruction of aircraft accidents is discussed. The possible roles of voluntary substances, including alcohol, medications and CO and nicotine from cigarette smoke, and environmental intoxicants including fuel, cooling fluids, lubricants, hydraulic fluids and battery fluids, in causing and allowing the identification of causes of aircraft accident fatalities are examined, and means for determining their levels in the body are indicated. The importance of toxicological investigations to aircraft accident investigation is concluded, and it is noted that such studies can only be considered as part of a cooperative effort between the toxicologist and the investigating body for the rapid acquisition of useful information. A.L.W.

A80-32579 The contribution of histopathology to investigations following aircraft accidents (Contribution de l'histopathologie aux enquêtes après accidents aériens). C. Nogues. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 1st Quarter, 1979, p. 24-30. 8 refs. In French.

The histopathological examination of tissue samples obtained in the investigation of aircraft accidents is discussed. Information obtainable from studies of hepatic, pulmonary, renal and visceral lesions and tissue debris is illustrated, and the classification of lesions into those caused by the accident, those of apparently questionable significance (possible relating to pre-existing conditions), those contributing to the reconstruction of the events of the accident and those not relating to the cause of the accident is considered. It is concluded that, although histopathological analysis rarely leads to the proof of the cause of an aircraft accident, it can provide information as to the sequence of events occurring during the accident and pre-existing conditions leading to the aggravation of dangerous circumstances. A.L.W.

A80-32580 A physical study of vibratory stress - Physiological interpretation - Importance in aircraft accidents (Etude physique de l'agression vibratoire - Interprétation physiologique - Intérêt dans les accidents d'aéronefs). P. Quandieu, P. Borredon, and L. Pellieu (Centre d'Etudes et de Recherches de Médecine Aérospatiale, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 1st Quarter, 1979, p. 31-35. In French.

The physical responses of an animal to mechanical vibration are investigated, taking into account the effects of muscle tension and the implications of the study for aircraft accident investigations. The relative acceleration of a laboratory rabbit with its feet secured to a test platform with respect to the platform, which was undergoing 10-Hz sinusoidal vibrations at peak magnitudes of 1 g, was measured by a force sensor placed under the animal and attached to the platform. It is found that muscular activity can serve to damp the vibrations. Results are interpreted in terms of a model of a mechanical system consisting of a series of passive and active rejection mechanical filters connected in parallel, with stiffness dependent on muscle tension. A.L.W.

A80-32581 The organization of medical aid in air disasters - Berlin-Tegel international airport (Organisation de secours médicaux en cas de catastrophe aérienne - A propos de l'aéroport international de Berlin-Tegel). G. Poyot (Armée de l'Air, Base Aérienne, Ochey, Meurthe-et-Moselle, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 1st Quarter, 1979, p. 36-39. In French.

Consideration is given to the provisions for medical aid in the event of a major passenger aircraft crash at the Berlin-Tegel international airport. The emergency medical plan consists of the localization of the accident and the broadcasting of the medical and fire alert, the fighting of any fire and the freeing of victims, medical first aid (triage and the preparation of wounded for evacuation) and the evacuation of wounded to the receiving hospitals. Medical personnel are drawn from the permanent medical staff of the air base having jurisdiction over the airport and from local hospitals, and are equipped with a mobile triage and first aid station capable of handling 75 casualties. Medical strategies include a pretriage to identify and treat the most seriously wounded at the site of the accident, the optimal placement of the triage center, and the utilization of specialized equipment packages designed for the treatment of the most common aircraft accident injuries. The plan requires the supervision of the chief airport physician from the time of the first alert to the evacuation of the wounded, and close cooperation between the health services of the base. A.L.W.

A80-32582 Medical considerations in light aircraft accidents (Considérations médicales sur les accidents de l'aviation légère). G. Plantureux, R. Auffret, and J. Lavernhe (Aéroclub de France, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 1st Quarter, 1979, p. 40-44. 16 refs. In French.

The causes and medical consequences of accidents involving private airplanes and gliders are analyzed. Light aircraft accident and injury rates are reviewed, and it is noted that both rates have decreased in the past ten years, with involuntary landings and mid-air collisions the greatest sources of fatal accidents. A detailed examination of the causes of light aircraft accidents demonstrates the predominant contributions of human errors, the most prevalent of which are found to be errors in judgement and insufficient pilot ability. A statistical analysis of the bodily distribution and severity of the injuries of 334 persons injured in light aircraft accidents in France between 1974 and 1977, indicates that very serious injuries are rare and are usually associated with rapid death. Most injuries occur to the head, neck and upper limbs rather than the better protected thorax and abdomen. Means suggested to reduce light aircraft accidents and their severity include modifications to cabin equipment, and improved pilot training and regulation. A.L.W.

A80-32583 The place of the psychological factor among the causes of aircraft accidents in general aviation (La place du facteur psychique dans les causes des accidents aériens en aviation générale). R. J. Digo (Centre Principal d'Expertise Médicale du Personnel Navigant, Paris, France) and J. Lavernhe (Compagnie Nationale Air France, Centre d'Examen Médical du Personnel Navigant, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 1st Quarter, 1979, p. 45-51. In French.

The significance of psychological factors as causes of general aviation aircraft accidents is discussed. The qualitative deficiencies of the medical examination of general aviation pilots and the unique psychological character of general aviation are pointed out, and the causes of aircraft accidents are classified as extrinsic (meteorological, technical, or infrastructural) or intrinsic human factors, which are further subdivided into human technical failures, somatic failures, psychosomatic failures, psychological failures, moral failures, and human relations failures. The various psychopathological traits encountered in general aviation are then examined, including age-related disorders, neuroses, psychosomatic disorders, psychotic states, psychopathic personalities and bio-neuro-organic states including intoxication. Finally, a set of measures intended to reduce the incidence of psychologically caused aircraft accidents is proposed. A.L.W.

A80-32584 The influence of intermittent aircraft noise on sleep. II (Influence des bruits intermittents d'avions sur le sommeil. II). M. V. Strumza. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 1st Quarter, 1979, p. 52-59. In French.

Results of investigations of the immediate reactions of sleeping persons to intermittent sound stimuli are presented as part of a review of studies of the influence of intermittent aircraft noise on the sleep of persons living near an airport. Responses to the noise are shown to depend on the type of noise, its intensity and duration, the number of stimuli during the night, the information content of the noise and the ambient environment, and expressions relating peak sound intensity, sound duration, and stimulus number to waking frequencies, sleep stage disturbances as indicated by electroencephalography and neuro-autonomic reactions are presented. The rates of physiological responses to noise are also shown to depend on the age, sleep stage, condition with respect to sleep deprivation, circadian rhythm and individual characteristics of the sleepers, although not on their sex. A.L.W.

A80-32585 **Considerations with regard to a test of the Essilor visiotest (Réflexions à propos d'un essai du visiotest Essilor).** J. P. Chevaleraud (Service de Santé des Armées, Paris, France), M. Maille (Hôpitaux des Armées, Paris, France), and G. Santucci. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 1st Quarter, 1979, p. 60-62. In French.

Results of an evaluation of the visiotest device in the detection of vision anomalies are reported. Data obtained from the visiotest concerning the monocular visual acuities, myopic or hypermetropic tendencies, horizontal and vertical oculomotor equilibria, stereoscopic vision and color vision of 75 male subjects were compared with that obtained using conventional techniques. Discrepancies between the results of measurements of all factors with the exception of vertical oculomotor equilibrium are noted and modifications which would allow an improvement in visiotest performance are proposed. It is concluded that the visiotest may be used pending modifications for the monitoring of visual aptitudes and in the physical examination of private pilot's license candidates. A.L.W.

A80-32586 **The application of echocardiography to the cardiological evaluation of flight personnel (Apport de l'échocardiographie à l'expertise cardiologique du personnel navigant).** J. Droniou, J. C. Duret, J. C. Richart, and J. Pernod. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 1st Quarter, 1979, p. 63-68. 11 refs. In French.

Following a brief review of the principles and techniques of the established method of one-dimensional motion time echocardiography, and the promising technique of two-dimensional echocardiography, the importance of echocardiography to the cardiological evaluation of flight personnel is discussed. The use of echocardiography in the diagnosis of two conditions incompatible with aeronautical activity, mitral prolapsus and obstructive cardiomyopathy is illustrated, and consideration is given to its use in the evaluation of myocardial function. It is concluded that the noninvasive character and information quality of echocardiography are well adapted to the cardiological evaluation of flight personnel, and make the technique well suited to the selection and monitoring of astronauts and pilots of high-performance aircraft. A.L.W.

A80-32587 **Abdominal echotomography - Its place in the evaluation of flight personnel (Echotomographie abdominale - Sa place dans l'expertise du personnel navigant.)** E. Robin, J. Taboury, J. Flageat, C. Kleitz, P. J. Metges, and R. P. Delahayé (Hôpital d'Instruction des Armées Begin, Saint Mandé, Val-de-Marne; Service de Santé pour l'Armée de l'Air, Ecole d'Application, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 1st Quarter, 1979, p. 69-74. In French.

The application of echotomography to the physical evaluation of flight personnel is discussed. The physical bases of the propagation of ultrasonic waves through a medium and at an interface between two media and the generation and detection of ultrasonic waves are reviewed, and the operational principles of amplitude-mode, time-motion-mode, brightness-mode and dynamic-mode echotomography are outlined. Information obtainable from an echotomographic examination of the liver, the spleen, the gall bladder, the pancreas, the kidneys, the abdominal aorta and the bladder is discussed, and the principle cases in which echotomography is employed to detect and characterize specific abdominal conditions are surveyed. It is concluded that echography represents a rapid, inexpensive, noninvasive means of obtaining photographic records without possible side effects, and has a great potential for use in aeronautical medicine. A.L.W.

A80-32588 **Central field of vision and electroculography in moderate hypoxia (Champ visuel central et électroculographie en hypoxie modérée).** G. F. Santucci, B. Darnaud, and J. Chevaleraud. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 3rd Quarter, 1979, p. 192-195. 8 refs. In French.

Experiments were conducted at an altitude of 3600 m on 10 healthy subjects (9M plus 1F) 20 to 30 years of age. Each subject was required to recognize the different light flashes presented to him and to define their location in a 30-deg visual field. The results indicate that a 3600-m (moderate) hypoxia is incapable of perturbing both the central field of vision and the electroculogram. In particular, when a visual field is affected at such an altitude, this disorder is essentially related more to the central components than to the retinal components. S.D.

A80-32589 **On the feasibility of contact lenses for flight personnel (A propos de la tolérance des protheses de contact chez le personnel navigant).** J. P. Boissin (Compagnie Nationale Air France, Service Médical, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 3rd Quarter, 1979, p. 198-200. In French.

Regular annual supervision and answers given by contact-lens wearers to an anonymous questionnaire have demonstrated that contact lenses do not present a severe hazard to aircrew members. However, the conditions under which the contact lenses are employed often lead to the impracticality of contact lenses and thus to a relatively important rate at which crew members gave up wearing contact lenses. S.D.

A80-32590 **Study of pilot's sight direction on Mercure flight simulator (Etude de la direction du regard des pilotes sur simulateur de vol Mercure).** J. P. Papin, D. Viard (Centre de Recherches de Médecine Aéronautique, Paris, France), and M. Neboit (Organisme National de Sécurité Routière, Montlhéry, Essonne, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 3rd Quarter, 1979, p. 201-204. In French.

The direction of sight of a pilot is analyzed in the Mercure flight simulator in the contex of research work on the nature of visual information to be presented to pilots on future electronic visual-display systems. The observations are recorded during the takeoff and landing phases using the NAC Eye Recorder on 16-mm film. Results are given for landing with a headup display. Finally, a preliminary interpretation is presented on the basis of a few analyzable results. S.D.

A80-32591 **Considerations regarding sudden deafness - Aeronautical incidents (Réflexions sur la surdité brusque - Incidences aéronautiques).** H. Lienhart, P. Salgas (Hôpitaux des Armées, Paris, France), and P. Blanc (Centre Principal d'Expertise Médicale du Personnel Navigant, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 3rd Quarter, 1979, p. 205-210. 9 refs. In French.

In the light of pertinent observations, the paper reviews the principal data on the diagnostic and urgent treatment of sudden deafness in aeronautical incidents. Attention is given to the possibility of recovery, even complete, in cases detected after long delays. The consequences of sudden deafness at the level of medical examination of air flight personnel are identified. S.D.

A80-32592 **Impedance measurement - Importance in otologic assessment of air flight personnel (L'impédancemétrie - Intéret dans l'expertise otologique du personnel navigant de l'aéronautique).** H. Lienhart (Hôpitaux des Armées, Paris, France) and P. Blanc (Centre Principal d'Expertise Médicale du Personnel Navigant, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare*, vol. 18, 3rd Quarter, 1979, p. 211-216. In French.

Following a brief outline of the principle and method of measuring the impedance of the middle ear, the paper reviews the results that can be attained particularly in the diagnosis of closed-tympan transmission deafness and in the study of auditory-tube permeability. Clinical observations are presented which demonstrate the important role of the impedance-measuring method in the medical assessment of air flight personnel. S.D.

A80-32593 Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia (Etude de l'effet inotrope cardiaque rencontré au début de l'hypoxie hypoxique). P. J.-P. Borredon, M. Fischler, C. Grousset, J.-D. Massard, P. Quandieu, M. Marin, and F. Lienhard (Service de Santé pour l'Armée de l'Air, Ecole d'Application; Centre de Recherches de Médecine Aeronautique, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 3rd Quarter, 1979, p. 217-224. 11 refs. In French.

The increase in the left ventricular pressure (LVP) during the initial phase of hypoxic hypoxia produced by artificial ventilation with pure nitrogen is investigated in the rabbit. ATP and creatine phosphate (CP) contents in the myocardium are determined. During the initial phase of hypoxic hypoxia, the LVP increases with decreasing CP content, while the ATP level remains unchanged. A linear relation between LVP increase and CP evolution is observed with epinephrine injection. The CP tissue level measurement appears to be an excellent criterion for determining the dynamic effort performed or to be performed by the heart cell effector. S.D.

A80-32594 Effect of normobaric hyperoxia on renal ammoniogenesis (L'effet de l'hyperoxie normobare sur l'ammoniogenese rénale). I. Nastoiu, I. Pintilie, and T. Bades (Centre Médicine Aéronautique, Bucarest, Rumania). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 3rd Quarter, 1979, p. 225-227. 10 refs. In French.

The present study on pilot trainees deals with an analysis of the influence of short-duration normobaric hyperoxia on renal ammonium generation as a mechanism of acid-base homeostasis. The analysis is intended to elucidate the extent to which normobaric (100 percent) oxygen respiration participates in disturbing the acid-base balance of the organism. It is shown that a decrease in the hydrogen ions at the renal tubular cell level, as a result of respiratory alkalosis induced by normobaric hyperoxia, does not bring about renal ammoniogenesis. S.D.

A80-32595 Preliminary results of microwave effects on the central nervous system of a primate /Macaca mulatta/ (Résultats préliminaires de l'étude des effets des micro ondes sur le systeme nerveux central d'un primate /Macaca-mulatta/). M. J. Klein and C. L. Milhaud (Centre de Recherche de Médecine Aérospatiale, Paris, France). *(Société Française de Radioprotection, Congrès International, 9th, Nainville-les-Roches, France, May 22-26, 1978.) Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 3rd Quarter, 1979, p. 232-237. 47 refs. In French. Direction des Recherches, Etudes et Techniques Contracts No. 74-1147; No. 77-1001.

Thirteen adult, male Macaque rhesus monkeys (4-8 kg) were exposed to ionizing radiation under different experimental conditions: 9 monkeys for electrophysiological cerebral studies, and 4 monkeys for the study of behavioral effects. Attention is given to cerebral electrogenesis in the monkey. Preliminary results indicate that the thermal-origin effects on cerebral electrogenesis and behavior appear to be well established above a certain average power density. Adaptation of the animal model to the wavelength under study will make it possible to reduce the discrepancies of present biological results. S.D.

A80-32596 Vibration transmission through different helicopter seat cushions (Transmissibilité des vibrations à travers différents coussins de siège d'hélicoptère). J. L. Poirier (Centre d'Essais en Vol, Laboratoire de Médecine Aérospatiale, Brétigny-sur-Orge, Essonne, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 4th Quarter, 1979, p. 262-268. In French.

Vibration tests were conducted in order to determine optimal cushion-backrest combinations for helicopter seats. Subjects were subjected to four types of acceleration at sinusoidal vibration frequencies of 2 and 30 Hz. A summary of results is provided, and the optimal (in terms of comfort) cushion is identified. B.J.

A80-32599 Gastric ulcers affecting pilots of the Peruvian air force (L'ulcère gastrique chez le personnel de pilotes de la force de l'air du Pérou). A. Cueto Duthurburu. *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 4th Quarter, 1979, p. 284-287. 12 refs. In French.

A80-32600 Acute microwave irradiation with regard to a case recently monitored at Begin Hospital (Irradiation aiguë aux micro-ondes à propos d'un cas récemment suivi à l'Hôpital Begin). R. P. Delahaye, P. Doury, J. Conrad, P. J. Metges, and S. Pattin (Hôpital d'Instruction des Armées Begin, Saint Mandé, Val-de-Marne; Service de Santé pour l'Armée de l'Air, Ecole d'Application; Service de Santé pour l'Armée de Terre, Ecole d'Application, Paris, France). *Médecine Aéronautique et Spatiale, Médecine Subaquatique et Hyperbare,* vol. 18, 4th Quarter, 1979, p. 293-296. In French.

The case history of a radar technician exposed to 20 min of global microwave irradiation is reported. The subject experienced a sensation of heat in his hands and lower back pain during the accidental exposure during routine antenna maintenance, which intensified following the exposure, resulting in inability to move and nausea for a period of four days. A comprehensive examination on the fourth day, however, revealed no clinical, hemotological, biochemical or opthalmological irregularities. Recommendations concerning the prevention of further accidental exposure to microwaves by workers are presented. A.L.W.

ADRENOCORTICAL RESPONSE IN RATS SUBJECTED TO A STRESS OF RESTRAINT BY IMMOBILIZATION WHETHER ACCOMPANIED BY HYPOTHERMIA OR NOT

Laia Buchel, Monique Prioux-Guyonneau, and Lola Libian Apr. 1980 10 p refs Transl. into ENGLISH from Compt. Rend. Soc. Biol. (France), v. 168, no. 10-12, 1974 p 1202-1207 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76119) Avail: NTIS HC A02/MF A01 CSCL 06C

The restraint associated with hypothermia which increases the adrenal activity in rats was investigated. In rats with nomothermia or light hypothermia, the plasma and adrenal corticosterone levels increase at least threefold whatever the duration of restraint. Their return to normal values depends on the duration of the restraint. Exposure to cold produces in free rats a light hypothermia with an increase of the plasma and adrenal corticosterone levels, and in restraint animals an important hypothermia which does not potentiate the stimulation of adrenocortical activity induced by the restraint alone. PLASMA CORTISOL LEVELS AND AUDITORY FUNCTIONING IN HUMANS EXPOSED TO SHORT AND PROLONGED DURATIONS OF NOISE Ph.D. Thesis

Thomas Edward Bennett 1979 154 p
Avail: Univ. Microfilms Order No. 8005976

Audiometric and hormonal effects of noise exposure were studied in male and female subjects exposed to moderately intense noise (85 dBA, broadband, pink noise) for short and prolonged durations. The major focus was on: (1) characterizing changes in circulating cortisol levels (using radioimmunoassay) before, during, and after noise exposure; (2) measuring the effects of noise on three facets of auditory perception (pure tone threshold sensitivity, level of initial masing perception, and loudness discrimination ability); and (3) examining possible relationships among duration of noise exposure, curculating hormone levels, and hearing ability in male and female human subjects. It was established that noise exposure results in a decreased ability to detect pure tones (threshold shifts), an increased ability to detect changes in loudness (a recruitment phenomenon), and a decreased ability to detect, tones in the presence of background noise (discrimination impairments). Dissert. Abstr.

INITIAL DYNAMICS OF THE EKG DURING AN ELECTRICAL DEFIBRILLATION OF THE HEART

I. I. Bikov, Ya. P. Chebotarov, and V. G. Nikolaev Apr. 1980 12 p refs Transl. into ENGLISH from Fiziol. Zh. Akad. Nauk Ukr RSR (USSR), v. 15, no. 3, 1969 p 322-327 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(NASA-TM-76002) Avail: NTIS HC A02/MF A01 CSCL 06P

In tests on 11 mature dogs, immobilized by means of an automatic blocking and synchronization system, artefact free EKG were obtained, beginning 0.04-0.06 sec after passage of a defibrillating current. Different versions of the start of fibrillation were noted, in application of the defibrillating stimulus in the early phase of the cardiac cycle. A swinging phenomenon, increasing amplitude, of fibrillation was noted for 0.4-1.5 sec after delivery of a subthreshold stimulus. Conditions for a positive outcome of repeated defibrillation were found, and a relationship was noted between the configuration of the exciting process with respect to the lines of force of the defibrillating current and the defibrillation threshold. It was shown that the initial EKG dynamics after defibrillation is based on a gradual shift of the pacemaker from the myocardium of the ventricles to the sinus node, through phases of atrioventricular and atrial automatism. COLD SHIVERING ACTIVITY AFTER UNILATERAL DESTRUCTION OF THE VESTIBULAR APPARATUS

G. I. Kuzmina Mar. 1980 11 p refs Transl. into ENGLISH from Fiziol. Zh. SSSR (USSR), v. 65, no. 11, 1979 p 1655-1660 Transl. by Kanner (Leo) Associates, Redwood City, Calif.
(NASA-TM-76099) Avail: NTIS HC A02/MF A01 CSCL 06P

The bioelectric activity of muscles (flexors and extensors of the forelimbs and hindlimbs) during cold shivering after unilateral destruction of the vestibular apparatus. It was found, that unilateral delabyrinthing produces bilateral facilitation of cold shivering in the flexor extremities more pronounced on the ipsilateral side. In the extensor muscles there was an absence of bioelectric activity both before and after delabyrinthing. Enhancement of cold shivering in the flexor extremities following intervention was evidently conditioned by removal of the inhibiting effect of the vestibulary apparatus on the function of special centers. (NASA-TM-76069) Avail: NTIS HC A02/MF A01 CSCL 06S

The experiments were performed on rabbits kept in small cages for 2-12 weeks. Their motor activity was greatly restricted. The arteries of the heart were injected with an India ink gelatine mass, injection was directly into the coronary arteries. After fixation in 10% formaline solution 120 micron sections were cut. These were cleared by the Malygin method and examined with a light microscope. After exposure to hypokinetic conditions the picture of the cardiac arterial bed changed. During the first weeks the capillaries of the myocardium were significantly constricted, their course becoming sinuous. With prolonged exposure to hypokinetic conditions the vessels were found to dilate gradually and myocardial architectonics changed. Author

MODEL FOR MEASURING THE HEALTH IMPACT FROM CHANGING LEVELS OF AMBIENT AIR POLLUTION: MORBIDITY STUDY

Tsukasa Namekata, Bertram W. Carnow, Zanet Flournoy-Gill, Eileen B. OFarrell and Domenic Reda Aug. 1979 74 p refs
(Contract EPA-68-02-2492)
(PB80-107030; EPA-600/1-79-024) Avail: NTIS HC A04/MF A01 CSCL 06T

The relationship between human health and ambient air concentrations of the major pollutants in the city of Chicago is examined using linear regression models to quantitatively estimate the degree of the air pollution contribution to emergency room visits for cardiac and respiratory diseases. According to the results, sulfur dioxide based on patient exposure levels accounts for about 13% of the variation of emergency room visits for acute bronchial and lower respiratory infections and about 22% for total cardiac diagnoses. Nitric oxide based on measurements from the closest site to the hospitals can account for about 7% of the variation of visits for total respiratory diagnoses, 6% for allergic conditions and upper respiratory infections. 4% for total cardiac diagnoses and 4% for hypertension and vascular heart diseases GRA

ABSORPTION CHARACTERISTICS OF PROLATE SPHEROIDAL MODEL OF MAN AND ANIMALS AT AND NEAR RESONANCE FREQUENCY Final Report, 15 Sep. 1976 - 15 Mar. 1978
Vijai K. Tripatai and Hyuckjae Lee Aug. 1979 74 p refs
(Grant EPA-R-804697)
(PB80-108293; EPA-600/1-79-025) Avail: NTIS HC A04/MF A01 CSCL 06R

The absorption characteristics of prolate spheroidal models consisting of homogeneous biological tissues radiated with plane waves at an arbitrary angle of incidence at and near the resonance frequency were evaluated. A general formulation of Stevenson's method in the third approximation is presented which can be applied to an arbitrary angle of incidence and leads to an improvement in frequency range of validity and accuracy as compared with first order solutions. The extended boundary condition emthod is also presented since it was found to be inplementable for realistic models at frequencies approaching resonance. GRA

K-LINES: A THEORY OF MEMORY
Marvin Minsky Jun. 1979 25 p refs
(Contract N00014-79-C-0260)
(AD-A078116; AI-M-516) Avail: NTIS HC A02/MF A01 CSCL 05/10

Most theories of memory suggest that when we learn or memorize something, some representation of that something is constructed, stored, and later retrieved. This raises questions like: How is information represented? How is it stored? How is it retrieved? Then, how is it used? This paper tries to deal with all of these at once. When you get an idea and want to remember it, you create a K-line for it. When later activated, the K-line induces a mental state resembling the one that created it. A partial mental state is a subset of those mental agencies operating at one moment. This view leads to many ideas about the development, structure and physiology of Memory, and about how to implement frame-like representations in a distributed processor. GRA

SUMMARY OF DEPARTMENT OF TRANSPORTATION/FEDERAL AVIATION ADMINISTRATION TASK FORCE ON CREW WORKLOAD REPORT Final Report, May 1977 - Aug. 1978
George C. Hay, Charles D. House, and Richard L. Sulzer Dec. 1978 216 p refs
(AD-A068189; FAA-EM-78-15) Avail: NTIS HC A10/MF A01 CSCL 01/2

An analysis of the total accident experience of U.S. certificated air-route carriers reveals that there is no evidence that a flight deck crew of two in an appropriately designed aircraft is less safe than a crew of three pilots. A review of the procedures followed in the airworthiness certification of recent U.S. air-carrier aircraft indicates that manufacturers have demonstrated pilot workload in a fully modern and competent fashion, under the cognizance of FAA, and that actual crew complement approval is based on both the results of the workload demonstrations and the experience gained in a significant flight test program. HUMAN COMFORT RESPONSE TO DOMINANT RANDOM MOTIONS IN LONGITUDINAL MODES OF AIRCRAFT MOTION
Ralph W. Stone, Jr. Jan. 1980 130 p refs
(Contract NAS1-14908)
(NASA-CR-159186; UVA/528156/MAE-CE79/130) Avail: NTIS HC A07/MF A01 CSCL 05H

The effects of random vertical and longitudinal accelerations and pitching velocity passenger ride comfort responses were examined on the NASA Langley Visual Motion Simulator. Effects of power spectral density shape were studied for motions where the peak was between 0 and 2 Hz. The subjective rating data and the physical motion data obtained are presented without interpretation or detailed analysis. There existed motions in all other degrees of freedom as well as the particular pair of longitudinal airplane motions studied. These unwanted motions, caused by the characteristics of the simulator may have introduced some interactive effects on passenger responses J.M.S.

(Contract N00014 78 C 0238)
(AD A079323; VPI HFL 79 12/ONR 79 1) Avail: NTIS HC A03/MF A01 CSCL 05/8

This report summarized the work performed during the first year, dealing with two tasks. The first task, entitled 'Human Engineering Survey and Analysis', reviews the current flap panel display technologies, a summary of the human operator-critical characteristics of each technology, a technical summary of relevant human operator visual characteristics, and an evaluation of each technology by current visual display theoretical evaluation approaches. The second task, entitled 'Hue/Luminance Contrast Tradeoffs,' involved laboratory research designed to develop a metric by which luminance contrast and chrominance contrast can be traded off in display design to provide a metric of total effective display contrast. Work to date on both these tasks is summarized in this report. GRA

ESTABLISHMENT OF THE REPEATABILITY OF PERFORMANCE OF THE SA103C THREE YEAR OLD CHILD TEST DUMMIES Final Report, Sep. 1978 - Jun. 1979
Kenneth N. Naab and Stephen A. Baum Jun. 1979 137 p refs
(Contract DOT-HS-8-02022)
(PB80-112204, CALSPAN-6385-V-1, DOT-HS-805-071) Avail: NTIS HC A07/MF A01 CSCL 13I

The performance repeatability of four SA103C three year old child test dummies was investigated. The primary measures of dummy sled test performance analyzed with the statistical methods were: (1) peak head resultant acceleration; (2) peak chest resultant acceleration; (3) maximum head horizontal displacement; and (4) maximum knee horizontal displacement. An analysis of the absolute deviations of each data point from the overall means demonstrated that the dummy variations were within an acceptable level for all performance measures. In addition, performance comparison overlay time history graphs are presented for direct comparisons. GRA

The effect of immobilization for 1, 2, and 24 hours, and of daily (for 2 hours for 7 days) immobilization on the blood nucleotide (ATP, ADP, AMP) level was studied on 79 male rats. A progressive reduction of the ATP content was most pronounced in immobilization for 24 hours. This was accompanied by an increase of lymphopenia and eosinopenia. A fall of the relative weight of the thymus and a weight gain of the adrenal glands was observed along with a reduction of ascorbic acid concentration in both of them. In case of daily immobilization for 2 hours, the ATP and ADP content on the 1st and 2nd day was below the normal level, and then showed a gradual increase, with complete normalization in 6-7 days, except for inorganic phosphorus the level of which remained lower than normal. R.E.S.

INVESTIGATION OF THE EFFECT OF SPACE FLIGHT FACTORS ON CHROMOSOMES IN SEEDS
L. G. Dubinina Mar. 1980 4 p Transl. into ENGLISH from the book "Issledovaniya Deystviya Faktorov Kosmicheskogo Poleta na Khromosomy i Semenakh" Moscow, Nauka Press, 1978 p 106-107 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76113) Avail: NTIS HC A02/MF A01 CSCL 06C

Frequency of mutations in postflight air-dry Crepis capillaris seeds kept for five days aboard an artificial satellite was 36.0 + or - 1.9%, vs. 19.01 + or - 1.2% for seeds in a similar ground experiment. Both groups of seeds were prepared in identical concentrations and were treated by the same mutagen. The spectrum of mutations in postflight Crepis capillaris seeds contained a large number of chromosome-type mutations and some cells showed multiple alterations. Postflight seeds not treated with mutagens had a slightly higher level of mutability. R.E.S.

EFFECTS OF MOTOR PATTERNS ON WATER-SOLUBLE AND MEMBRANE PROTEINS AND CHOLINESTERASE ACTIVITY IN SUBCELLULAR FRACTIONS OF RAT BRAIN TISSUE
L. Z. Pevzner, L. Venkov, and L. Cheresharov Apr. 1980 9 p refs Transl. into ENGLISH from Ukr. Biokhim. Zh. (USSR), v. 50, no. 1, 1978 p 20-24 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by Acad. of Sci., Leningrad and Bulgarian Acad. of Sci., Sofia
(Contract NASw-3198)
(NASA-TM-76115) Avail: NTIS HC A02/MF A01 CSCL 06C

Albino rats were kept for a year under conditions of daily motor load or constant hypokinesia. An increase in motor activity results in a rise in the acetylcholinesterase activity determined in the synaptosomal and purified mitochondrial fractions while hypokinesia induces a pronounced decrease in this enzyme activity. The butyrylcholinesterase activity somewhat decreases in the synaptosomal fraction after hypokinesia but does not change under the motor load pattern. Motor load causes an increase in the amount of synaptosomal water-soluble proteins possessing an intermediate electrophoretic mobility and seem to correspond to the brain-specific protein 14-3-2. In the synaptosomal fraction the amount of membrane proteins with a low electrophoretic mobility and with the cholinesterase activity rises. Hypokinesia, on the contrary, decreases the amount of these membrane proteins. Author

THE EFFECTS OF RESTRAINT ON UPTAKE OF RADIOACTIVE SULFATE IN THE SALIVARY AND GASTRIC SECRETIONS OF RATS WITH PYLORIC LIGATION

J. A. Chayvialle, R. Lambert, and D. Ruet Mar. 1980 9 p refs Transl. into ENGLISH from Comt. Rend. Soc. Biol. (France), v. 166, no. 1, 1978 p 114-118 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76073) Avail: NTIS HC A02/MF A01 CSCL 06C

The effects of restraint on the amount of nondialysable radioactive sulfate in the gastric wall and the gastric juice and saliva were investigated. It was found that restraint provokes a significant decrease in salivary radioactive sulfate. This, in turn, is responsible for the decrease of sulfate in the gastric contents observed under these conditions in rats with pyloric ligation. Esophageal ligation associated with this prevents passage of saliva and lowers the amount of radioactive sulfate in the gastric juice. Restraint causes then an increase in the amount of sulfate in the gastric juice, the value observed being very much lower than that of rats with a free esophagus. At the level of the gastric wall, the change observed during restraint does not reach a significant threshold. R.E.S.

N80-21965*# National Aeronautics and Space Administration, Washington, D. C.

EFFECT OF SCENEDESMUS ACUMINATUS GREEN ALGAE EXTRACTS ON THE DEVELOPMENT OF CANDIDA LIPOLYTIC YEAST IN GAS CONDENSATE-CONTAINING MEDIA

B. I. Bilmes, G. A. Kasymova, V. I. Runov, and N. N. Karavayeva Mar. 1980 7 p refs Transl. into ENGLISH from Uzb. Biol. Zh. (USSR), no. 4, Apr. 1979 p 12-14 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76081) Avail: NTIS HC A02/MF A01 CSCL 06C

Data are given of a comparative study of the growth and development as well as the characteristics of the biomass of the C. Lipolytica yeast according to the content of raw protein, protein, lipids, vitamins in the B group, and residual hydrocarbons during growth in media with de-aromatized gas-condensate FNZ as the carbon source with aqueous and alcohol extracts of S. acuminatus as the biostimulants. It is shown that the decoction and aqueous extract of green algae has the most intensive stimulating effect on the yeast growth. When a decoction of algae is added to the medium, the content of residual hydrocarbons in the biomass of C. lipolytica yeast is reduced by 4%; the quantity of protein, lipids, thamine and inositol with replacement of the yeast autolysate by the decoction of algae is altered little. Author

CONTENT OF LIPIDS IN BLOOD AND TISSUES OF ANIMALS DURING HYPODYNAMIA

I. V. Federov, Yu. P. Rylnikov, and T. M. Lobova Jan. 1980 11 p refs Transl. into ENGLISH from Kardiologiya (USSR), v. 13, no. 7, 1973 p 50-54 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76023) Avail: NTIS HC A02/MF A01 CSCL 06C

Experiments on 97 rats and 50 rabbits were undertaken to study the influence of hypodynamia on the lipid content in the blood, liver, heart, and in the aorta. Reduction of muscular activity contributed to the increase of cholesterol and beta lipoprotein levels in the blood and to accumulation of cholesterol in the liver and the heart. The total lipid content in these tissues decreased. In the aorta the total lipid content increased, while lecithin and cephalin figures went down. The character of biochemical changes in hypodynamia resembles in many ways the lipid metabolism changes in atherosclerosis. Author

PHYSICAL AND CHEMICAL STUDIES OF CHLOROPHYLL IN MICROEMULSIONS Progress Report

Raymond A. Mackay 1979 22 p refs
(Contract EG-77-S-02-4452)
(COO-4452-001) Avail: NTIS HC A02/MF A01

Initial studies were designed to provide fundamental information on both the nature of photoreactions in microemulsions and the utility of these media as solvents for absorbers of solar energy. As a test system, the photoreduction of absorbed dye (methyl red and crystal violet) sensitized by chlorophyll a in an anionic mineral oil in water microemulsion was studied. Using ascorbate as the water soluble reducing agent and pigment concentrations of less than one per drop, the reaction exhibits a pseudo first order dependence on crystal violet, but a pseudo zero order dependence on methyl red. The effect of sensitizer, ascorbate concentration, and light intensity on the quantum yield was also examined. These studies were then extended to include concentrated chlorophyll solutions, microemulsions of varying charge type, product catalysis and synthetic porphyrins. DOE

AGE RELATED CHANGES IN THE BONE TISSUE UNDER CONDITIONS OF HYPOKINESIA

E. P. Podrushnyak and E. I. Suslov Apr. 1980 7 p refs Transl. into ENGLISH from Fiziol. Zh. (USSR), v. 9, no. 6, Nov. Dec. 1973 p 841-843 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by USSR Academy of Medical Sciences, Kiev
(Contract NASw-3199)
(NASA-TM-76019) Avail: NTIS HC A02/MF A01 CSCL 06S

Microroentgenography of nine young people, aged 24-29, before and after hypokinesia (16-37 days strict bed rest), showed that the heel bone density of those with initially high bone density generally decreased and that of those with initially low bone density generally increased. X-ray structural analysis of the femurs of 25 corpses of accidentally killed healthy people, aged 18-70, data are presented and discussed, with the conclusion that the bone hydroxyapatite crystal structure stabilizes by ages 20 to 25, is stable from ages 25 to 60 and decreases in density after age 60. It is concluded that bone tissue structure changes, both with age, and in a comparatively short time in hypokinesia. Author

MAIN TRENDS IN EXPERIMENTAL MORPHOLOGICAL RESEARCH IN ANGIOLOGY AND OUTLOOK FOR ITS DEVELOPMENT
N. A. Dzhavakhishvili and Ye. P. Melman Jan. 1980 10 p Transl. into ENGLISH from Arkh. Anat., Gistol. Embriol. (USSR), v. 66, no. 2, 1970 p 21-25 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-75980) Avail: NTIS HC A02/MF A01 CSCL 06E

The main prospective trends in the problem of collateral circulation and new trends in experimental angiology with respect to the effect of gravitational forces, hypodynamia and hypokinesia on the vascular bed are discussed. Author

N80-21979# Coast Guard Research and Development Center, Groton, Conn.
MARINE TRAFFIC DATA OF CHICAGO, ILLINOIS AND SOUTH SHORE OF LAKE MICHIGAN Final Report
J. J. Cherny, III, R. A. Silva, M. R. Young, and R. H. Charters Sep. 1979 118 p
(AD-A080060; CGR/DC-18/79) Avail: NTIS HC A06/MF A01 CSCL 15/5

Data was collected on the marine traffic and VHF-FM marine communications channel usage at Calumet Harbor, Chicago Harbor, and Lemont, Illinois, at the junction of the Chicago Sanitary and Ship Canal and Calumet-Sag Channel. The daily average of marine traffic, including large, medium, small and anchored vessels, and tugs-in-tow, transiting the Calumet Harbor/Indiana Harbor area is 48 and transiting Chicago Harbor is 312. The daily average of tug/barge and small vessel transits on the Chicago Sanitary and Ship Canal is 30; the Calumet-Sag Channel is 11. Approximately 300 hours of communications of VHF-FM Channel 16 and 150 hours of VHF-FM Channel 13 were recorded and monitored to determine channel efficiency (i.e., percentage of valid messages) and utilization. Channel 16 efficiency at Calumet Harbor is 47.76%; at Chicago Harbor, 66.50%; and at Lemont, 64.72%. R.E.S.

TESTING EVALUATION OF THE ELECTROCHEMICAL ORGANIC CONTENT ANALYZER Final Report
R. J. Davenport Nov. 1979 69 p refs
(Contract NAS9-15402)
(NASA-CR-160569; LSI-TR-334-4) Avail: NTIS HC A04/MF A01 CSCL 06K

The breadboard electrochemical organic content analyzer was evalauted for aerospace applications. An awareness of the disadvantages of expendables in some systems resulted in an effort to investigate ways of reducing the consumption of the analyzer's electrolyte from the rate of 5.17 kg/30 days. It was found that the electrochemical organic content analyzer can result in an organic monitor in the water quality monitor having a range of 0.1 to 100 mg/1 total organic carbon for a large number of common organic solutes. In a flight version it is anticipated the analyzer would occupy .0002 cu m, weigh 1.4 kg, and require 10 W or less of power. With the optimum method of injecting electrolyte into the sample (saturation of the sample with a salt) it would expend only 0.04 kg of electrolyte during 30 days of continuous operation. R.E.S.

THE EFFECT OF VARIETY AND MATURITY ON THE QUALITY OF FREEZE-DRIED CARROTS. THE EFFECT OF MICROWAVE BLANCHING ON THE NUTRITIONAL AND TEXTURAL QUALITY OF FREEZE-DRIED SPINACH Final Report
1979 131 p refs
(Contract NAS9-12434)
(NASA-CR-160567) Avail: NTIS HC A07/MF A01 CSCL 06H

Using carrots, the quality of freeze-dried products was studied to determine the optimum varieties and maturation stages for quality attributes such as appearance, flavor, texture, and nutritive value. The quality of freeze-dried carrots is discussed in terms of Gardner color, alcohol insoluble solids, viscosity, and core/cortex ratio. Also, microwave blanching of freeze-dried spinach was studied to determine vitamin interrelationships, anatomical changes, and oxidative deteriorations in terms of preprocessing microwave treatments. Statistical methods were employed in the gathering of data and interpretation of results in both studies. R.E.S.

PRINCIPLES FOR CLASSIFICATION OF WORK LOAD FOR WOMEN
A. O. Navakatikyan, A. P. Okhrimenko, A. N. Karakashyan, and V. A. Buzunov Mar. 1980 9 p refs Transl. into ENGLISH from Gig. Tr. Prof. Zabol. (USSR), no. 2, Jul. 1979 p 10-14 Transl. by Scientific Translation Service, Santa Barbara, Calif.
(Contract NASw-3198)
(NASA-TM-76084) Avail: NTIS HC A02/MF A01 CSCL 05H

In an attempt to develop guidelines for classification by degree of intensity of various kinds of physical work performed by women, the effects of different work loads on women as compared to men were studied under industrial and experimental conditions, including response of the cardiovascular and respiratory systems to specified physical exercises of increasing intensity. Physiological criteria for assessing female labor in terms of intensity are proposed. Author

A STUDY OF AGENT-REACTIVE FABRICS FOR USE IN PROTECTIVE CLOTHING Final Report, May 1978 - Jul. 1979
Gerald Zon Dec. 1979 114 p refs
(Contract DAAK11-78-C-0060)
(AD-A079940; AD-E410219; ARC/LS/TR-0060-2; ARCSL-CR-80002) Avail: NTIS HC A06/MF A01 CSCL 15/2

A broad investigation has been carried out in order to obtain modified fabrics which exhibit catalytic activity toward hydrolytic decomposition of chemical warfare agents. The major areas of study included the development of chemically modified Nomex and cotton-blend fabrics, mechanistic inquiries with regard to factors which control simulant/agent hydrolysis, and the design and construction of a suitable fabric testing apparatus for comparative evaluation of candidate fabrics. GUIDELINES FOR SPACECRAFT CLEANLINESS CONTROL
Paris ESA May 1979 33 p
(ESA-PSS-51/QRA-23-ESTEC-ISS-1) Avail: NTIS HC A03/MF A01

Possible spacecraft failures or malfunctions due to contamination are described. Ways are indicated in which contamination levels are predicted, spacecraft contamination is reduced, and contamination levels on and around the spacecraft are monitored. The cleaning procedures, the requirements regarding cleaning agents and cleanliness monitoring are discussed. Author (ESA)

ADVANCED INDUSTRIAL ROBOT CONTROL SYSTEMS
R. Paul, J. Luh, T. Anderson, J. Bender, E. Berg, B. Brown, C. S. Lin, M. Reminton, M. Walker, and C.-H. Wu Jul. 1979 92 p refs
(Grant NSF APR-77-14533)
(PB80-106396; TR-EE79-35; NSF/RA-790231, Rept-2) Avail: NTIS HC A05/MF A01 CSCL 13I

Work performed to improve the performance of current industrial robots by developing a consistent theory and task description language is described. The work includes: (1) the development of a simple joint motion control scheme to provide for the execution of structured robot task programs and to provide the capability of performing tasks on a moving conveyor; (2) the integration of teaching into the task program; (3) a direct on-line approach to motion time optimization; and (4) an approach to Cartesian motion control of a manipulator employing a fast exact method. SUBJECT INDEX

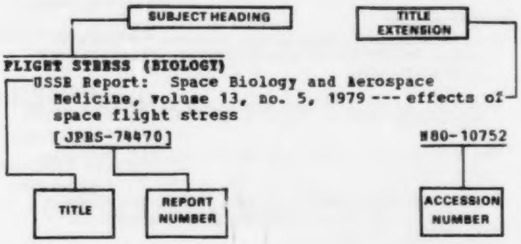
AEROSPACE MEDICINE AND BIOLOGY */A Continuing Bibliography (Suppl. 208)* JULY 1980

Typical Subject Index Listing



SUBJECT HEADING
TITLE EXTENSION
FLIGHT STRESS (BIOLOGY)
USSR Report: Space Biology and Aerospace Medicine, volume 13, no. 5, 1979 --- effects of space flight stress
[JPRS-74470]
N80-10752
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ABDOMEN
Abdominal echotomography - Its place in the evaluation of flight personnel A80-32587

ABERRATION
MTF of the defocused optical system of the human eye for incoherent monochromatic light A80-30673

ABNORMALITIES
An evaluation protocol for fighter aircrew with non specific ST-T abnormalities A80-31585

ABSORPTIVITY
Absorption characteristics of prolate spheroidal model of man and animals at and near resonance frequency [PB80-108293] N80-21028

ACCELERATION STRESSES (PHYSIOLOGY)
Investigation of transitional characteristics of the equilibrium preservation system --- human vertical posture response during acceleration A80-29909
Influence of longitudinal accelerations on fluid-electrolyte metabolism and renal function under conditions of immersion A80-32230
Functional state of the cardiovascular system following a three-day immersion and prophylactic rotations in a small-radius centrifuge A80-32233
Vibration transmission through different helicopter seat cushions A80-32596
Effect of tranquilizers on animal resistance to the adequate stimuli of the vestubular apparatus [NASA-TM-76109] N80-21960

ACCELERATION TOLERANCE
Influence of microwave irradiation on the resistance of rats to transversely applied g forces A80-31446
Investigation of the predictive value of electronystagmograms /ENGs/ in professional-selection vestibulometry A80-32235

ACOUSTIC IMPEDANCE
Impedance measurement - Importance in otologic assessment of air flight personnel A80-32592

ADAPTATION
Cardiac output at high altitude --- Russian book A80-30434
Preservation of equilibrium in orthograde and inverted body positions [NASA-TM-76112] N80-21976

ADRENAL GLAND
Adrenocortical response in rats subjected to a stress of restraint by immobilization whether accompanied by hypothermia or not [NASA-TM-76119] N80-21015

AEROSPACE ENGINEERING
Testing evaluation of the electrochemical organic content analyzer [NASA-CR-160569] N80-21981

AEROSPACE ENVIRONMENTS
Fifth Working Conference (Space Biology) at the 21st Plenary Session of COSPAR [NASA-TM-76107] N80-21017
Investigation of the effect of space flight factors on chromosomes in seeds [NASA-TM-76113] N80-21962

AEROSPACE MEDICINE
Medical research work onboard the Soyuz 30-Salyut 6 orbital laboratory A80-30513
An evaluation protocol for fighter aircrew with non specific ST-T abnormalities A80-31585
Aeromedical and physiologic aspects of fighter pilot selection and performance - Theoretical considerations A80-31586
Aeromedical evaluation of aircraft accidents - Human engineering aspects A80-31590
Influence of longitudinal accelerations on fluid-electrolyte metabolism and renal function under conditions of immersion A80-32230
The circadian rhythm of aerobic efficiency A80-32231
Effect of gas-mixture density on the performance of the respiratory system A80-32232
Functional state of the cardiovascular system following a three-day immersion and prophylactic rotations in a small-radius centrifuge A80-32233
Sleep pattern variation during adaptation to high-altitude hypoxia A80-32234
Air safety in 1978 from the medical point of view A80-32576
The investigator confronted with medical problems in technical investigations of aircraft accidents A80-32577
The importance of toxicological studies in aircraft accidents A80-32578
The contribution of histopathology to investigations following aircraft accidents A80-32579
A physical study of vibratory stress - Physiological interpretation - Importance in aircraft accidents A80-32580
The organization of medical aid in air disasters - Berlin-Tegel international airport A80-32581
Medical considerations in light aircraft accidents A80-32582
Considerations with regard to a test of the Essilor visiotest A80-32585

The application of echocardiography to the cardiological evaluation of flight personnel A80-32586
Abdominal echotomography - Its place in the evaluation of flight personnel A80-32587
Central field of vision and electroculography in moderate hypoxia A80-32588
On the feasibility of contact lenses for flight personnel A80-32589
Considerations regarding sudden deafness - Aeronautical incidents A80-32591
Impedance measurement - Importance in otologic assessment of air flight personnel A80-32592
Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia A80-32593
Effect of normobaric hyperoxia on renal ammoniogenesis A80-32594
Gastric ulcers affecting pilots of the Peruvian air force A80-32599
Hazards of high altitude decompression sickness during falls in barometric pressure from 1 atm to a fraction thereof [NASA-TM-76015] N80-21977

AGE FACTOR
Age related changes in the bone tissue under conditions of hypokinesia [NASA-TM-76019] N80-21971

AGING (BIOLOGY)
Favorable effects of the antioxidants sodium and magnesium thiazolidine carboxylate on the vitality and life span of Drosophila and mice A80-29085

AGRICULTURE
The effect of variety and maturity on the quality of freeze-dried carrots. The effect of microwave blanching on the nutritional and textural quality of freeze-dried spinach [NASA-CR-160567] N80-21982

AIR POLLUTION
Model for measuring the health impact from changing levels of ambient air pollution: Morbidity study [PB80-107030] N80-21027

AIR QUALITY
Model for measuring the health impact from changing levels of ambient air pollution: Morbidity study [PB80-107030] N80-21027

AIRCRAFT ACCIDENT INVESTIGATION
Aeromedical evaluation of aircraft accidents - Human engineering aspects A80-31590
Injury dynamics in aircraft accident A80-31592
Air safety in 1978 from the medical point of view A80-32576
The investigator confronted with medical problems in technical investigations of aircraft accidents A80-32577
The importance of toxicological studies in aircraft accidents A80-32578
The contribution of histopathology to investigations following aircraft accidents A80-32579
Medical considerations in light aircraft accidents A80-32582
The place of the psychological factor among the causes of aircraft accidents in general aviation A80-32583

AIRCRAFT ACCIDENTS
Psycho-social aspects of aircraft accidents A80-31591
A physical study of vibratory stress - Physiological interpretation - Importance in aircraft accidents A80-32580
The organization of medical aid in air disasters - Berlin-Tegel international airport A80-32581

AIRCRAFT NOISE
A psychoacoustic study of impulsive helicopter noise A80-30813
The psychoacoustic effects of aircraft noise on sleep - An in situ study A80-30815
The influence of intermittent aircraft noise on sleep. II A80-32584

AIRCRAFT PILOTS
Aeromedical and physiologic aspects of fighter pilot selection and performance - Theoretical considerations A80-31586
Study of pilot's sight direction on Mercure flight simulator A80-32590
Gastric ulcers affecting pilots of the Peruvian air force A80-32599
Summary of Department of Transportation/Federal Aviation Administration task force on crew workload report [AD-A068189] N80-21032

AIRCRAFT SAFETY
Air safety in 1978 from the medical point of view A80-32576
Summary of Department of Transportation/Federal Aviation Administration task force on crew workload report [AD-A068189] N80-21032

AIRPORTS
The psychoacoustic effects of aircraft noise on sleep - An in situ study A80-30815
The influence of intermittent aircraft noise on sleep. II A80-32584

ALTITUDE ACCLIMATIZATION
Sleep pattern variation during adaptation to high-altitude hypoxia A80-32234

ANALOG TO DIGITAL CONVERTERS
Analog-digital converter for the ELKAR electrocardiograph A80-31637

ANALYZERS
Testing evaluation of the electrochemical organic content analyzer [NASA-CR-160569] N80-21981

ANTHROPOMETRY
Establishment of the repeatability of performance of the SA103C three year old child test dummies [PB80-112204] N80-21036

ANTIBODIES
On the cellular autoimmune mechanism for eliminating erythrocytes normally and under extreme influences [NASA-TM-75735] N80-21014

ANTIOXIDANTS
Favorable effects of the antioxidants sodium and magnesium thiazolidine carboxylate on the vitality and life span of Drosophila and mice A80-29085

APPROXIMATION
Absorption characteristics of prolate spheroidal model of man and animals at and near resonance frequency [PB80-108293] N80-21028

ARTERIES
Comparative examination of the pulse of both right and left carotid arteries A80-29683
Effects of hypokinesia and hypodynamia on the intraorganic arteries of the heart [NASA-TM-76069] N80-21026

ARTERIOSCLEROSIS
Sphygmographic assessment of arterial distensibility in patients at risk of degenerative arterial disease A80-29682

Role of thyroxin in the thermoregulation of albino rats following cold acclimation A80-31075

COLOR CENTERS

The representation of colours in the cerebral cortex A80-29421

COLOR VISION

The representation of colours in the cerebral cortex A80-29421

COMPENSATORY TRACKING

Measurement of local indices of operator performance in the tracking mode A80-31635

COMPUTER GRAPHICS

The crew activity planning system bus interface unit [NASA-CR-160566] N80-21980

COMPUTER SYSTEMS DESIGN

Design principles for a system of automated processing of cardiological data on the M-6000 computer A80-31638

The crew activity planning system bus interface unit [NASA-CR-160566] N80-21980

COMPUTERIZED SIMULATION

Further observations on modelling of the cardiovascular function in the electrical model A80-29687

Design characteristics of an imitation system for the study of physiological processes on a digital computer A80-31639

CONCENTRATION (COMPOSITION)

Effect of space flight on sodium, copper, manganese and magnesium content in the skeletal bones [NASA-TM-75506] N80-21025

CONFERENCES

Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography, and Cardiovascular Dynamics, Univerza v Ljubljani, Ljubljana, Yugoslavia, March 20-22, 1978 A80-29676

Fifth Working Conference (Space Biology) at the 21st Plenary Session of COSPAR [NASA-TM-76107] N80-21017

CONTACT LENSES

On the feasibility of contact lenses for flight personnel A80-32589

COOLING SYSTEMS

Liquid conditioned suit and its use in alleviating heat stress in military flying A80-31584

COPPER

Effect of space flight on sodium, copper, manganese and magnesium content in the skeletal bones [NASA-TM-75506] N80-21025

CORONARY ARTERY DISEASE

Sphygmographic assessment of arterial distensibility in patients at risk of degenerative arterial disease A80-29682

COSMONAUTS

Medical research work onboard the Soyuz 30-Salyut 6 orbital laboratory A80-30513

Procedures and facilities for studying the capacity for work of cosmonauts A80-30514

Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6 A80-30515

Electrogustometric studies in orbital flight A80-30516

Observation of the vestibular function during space flight A80-30517

Determination of oxygen tension in the subcutaneous tissue of cosmonauts during the Salyut-6 mission A80-30518

The psychological experiments 'Self-interrogation' and 'Relaxation' A80-30520

CRASH INJURIES

Injury dynamics in aircraft accident A80-31592

CRASHES

The organization of medical aid in air disasters - Berlin-Tegel international airport A80-32581

Medical considerations in light aircraft accidents A80-32582

CREW PROCEDURES (INFLIGHT)

The crew activity planning system bus interface unit [NASA-CR-160566] N80-21980

CUSHIONS

Vibration transmission through different helicopter seat cushions A80-32596

D

DARKNESS

Flicker-induced asymmetries in border enhancement and the distinction between brightness and darkness systems A80-30674

DATA PROCESSING

Determination and elimination of low-frequency zero-level oscillations of an EKG during automated processing A80-31633

Design principles for a system of automated processing of cardiological data on the M-6000 computer A80-31638

DECOMPRESSION SICKNESS

Hazards of high altitude decompression sickness during falls in barometric pressure from 1 atm to a fraction thereof [NASA-TM-76015] N80-21977

DECONTAMINATION

Guidelines for spacecraft cleanliness control [ESA-PSS-51/QRA-23-ESTEC-ISS-1] N80-21985

DEFOCUSING

MTF of the defocused optical system of the human eye for incoherent monochromatic light A80-30673

DIAGNOSIS

Diagnostic accuracy of the conventional 12-lead and the orthogonal Frank-lead electrocardiograms in detection of myocardial infarctions with classifiers using continuous and Bernoulli features A80-30873

Express-diagnostic criteria of the cardiohemodynamic efficiency of juvenile athletes A80-32216

Glycerol test in diagnosing increased intralabyrinth pressure [NASA-TM-76110] N80-21022

DIASTOLE

Influence of diastolic fibre orientation on the left ventricular power generation A80-29685

DIGITAL COMPUTERS

Design characteristics of an imitation system for the study of physiological processes on a digital computer A80-31639

DISPLAY DEVICES

Signs and display systems: Graphic design and human engineering. A bibliography with abstracts [PB80-803158] N80-21031

Research on new electronic display technologies [AD-A079323] N80-21035

DISTORTION

Compensation for distortion in eye-movement monitors A80-29178

DRUGS

Effect of syrepar and oxaphenamide on liver function in experimental hypokinesia [NASA-TM-76011] N80-21973

DUMMIES

Establishment of the repeatability of performance of the SA103C three year old child test dummies [PB80-112204] N80-21036

DYNAMIC CHARACTERISTICS

Dynamic characteristics of the thorax connected with the heart action A80-29686

E

EARDRUMS

Use of double pulse holography for vibration analysis on a human ear in vivo A80-29359

ECHOCARDIOGRAPHY

The application of echocardiography to the cardiological evaluation of flight personnel A80-32586

EFFERENT NERVOUS SYSTEMS

Effect of tranquilizers on animal resistance to the adequate stimuli of the vestubular apparatus [NASA-TM-76109] N80-21960

ELECTROCARDIOGRAPHY

Clinical application of carotid electrosphygmography A80-29680

Genesis of the sphygmogram from the kinetocardiogram A80-29681

Comparative examination of the pulse of both right and left carotid arteries A80-29683

Diagnostic accuracy of the conventional 12-lead and the orthogonal Frank-lead electrocardiograms in detection of myocardial infarctions with classifiers using continuous and Bernoulli features A80-30873

An evaluation protocol for fighter aircrew with non specific ST-T abnormalities A80-31585

Determination and elimination of low-frequency zero-level oscillations of an EKG during automated processing A80-31633

Complex statistical analysis of the detection of the QRS complex --- in electrocardiography A80-31634

Recognition of EKG structural elements in an automated complex A80-31636

Analog-digital converter for the ELKAR electrocardiograph A80-31637

Initial dynamics of the EKG during an electrical defibrillation of the heart [NASA-TM-76002] N80-21015

ELECTROCHEMISTRY

Testing evaluation of the electrochemical organic content analyzer [NASA-CR-160569] N80-21981

ELECTROLYTE METABOLISM

Influence of longitudinal accelerations on fluid-electrolyte metabolism and renal function under conditions of immersion A80-32230

ELECTROMAGNETIC RADIATION

Absorption characteristics of prolate spheroidal model of man and animals at and near resonance frequency [PB80-108293] N80-21028

ELECTRONYSTAGMOGRAPHY

Investigation of the predictive value of electronystagmograms /ENGs/ in professional-selection vestibulometry A80-32235

ENVIRONMENTAL MONITORING

Formulation of a preliminary assessment of halogenated organic compounds in man and environmental media [PB80-112170] N80-21029

ENZYME ACTIVITY

Effects of motor patterns on water-soluble and membrane proteins and cholinesterase activity in subcellular fractions of rat brain tissue [NASA-TM-76115] N80-21963

ERYTHROCYTES

On the cellular autoimmune mechanism for eliminating erythrocytes normally and under extreme influences [NASA-TM-75735] N80-21014

ETHYL ALCOHOL

Effects of alcohol on aircrew performance - A field study A80-31588

EXOBIOLOGY

The identification of the 3-micron spectral feature in galactic infrared sources --- possible bacteria existence in circumstellar and interstellar dust A80-30342

Fifth Working Conference (Space Biology) at the 21st Plenary Session of CCSPAR [NASA-TM-76107] N80-21017

Aerospace Medicine and Biology: Cumulative index, 1979 [NASA-SP-7011(202)] N80-21970

EYE (ANATOMY)

MTF of the defocused optical system of the human eye for incoherent monochromatic light A80-30673

EYE EXAMINATIONS

Compensation for distortion in eye-movement monitors A80-29178

Considerations with regard to a test of the Essilor visiotest A80-32585

EYE MOVEMENTS

Compensation for distortion in eye-movement monitors A80-29178

F

FABRICS

A study of agent-reactive fabrics for use in protective clothing [AD-A079940] N80-21984

FEMALES

Principles for classification of work load for women [NASA-TM-76084] N80-21983

FERMENTATION

Fermentative activity of neutrophil leukocytes in rats under conditions of hypoxic hypoxia A80-30457

FIBER ORIENTATION

Influence of diastolic fibre orientation on the left ventricular power generation A80-29685

FIBRILLATION

Initial dynamics of the EKG during an electrical defibrillation of the heart [NASA-TM-76002] N80-21015

FIGHTER AIRCRAFT

An evaluation protocol for fighter aircrew with non specific ST-T abnormalities A80-31585

Aeromedical and physiologic aspects of fighter pilot selection and performance - Theoretical considerations A80-31586

FIRST AID

The organization of medical aid in air disasters - Berlin-Tegel international airport A80-32581

FLICKER
Flicker-induced asymmetries in border enhancement and the distinction between brightness and darkness systems
A80-30674

FLIGHT CHARACTERISTICS
Human comfort response to dominant random motions in longitudinal modes of aircraft motion
[NASA-CR-159186] N80-21033
Human comfort response to random motions with a dominant pitching motion
[NASA-CR-159140] N80-21034

FLIGHT CREWS
An evaluation protocol for fighter aircrew with non specific ST-T abnormalities
A80-31585
Effects of alcohol on aircrew performance - A field study
A80-31588
Summary of Department of Transportation/Federal Aviation Administration task force on crew workload report
[AD-A068189] N80-21032
The crew activity planning system bus interface unit
[NASA-CR-160566] N80-21980

FLIGHT FITNESS
Procedures and facilities for studying the capacity for work of cosmonauts
A80-30514

FLIGHT SIMULATION
Study of pilot's sight direction on Mercure flight simulator
A80-32590

FLIGHT STRESS (BIOLOGY)
Liquid conditioned suit and its use in alleviating heat stress in military flying
A80-31584

FLIGHT TESTS
Electrogustometric studies in orbital flight
A80-30516

FLUOROSCOPY
Development of a stereofluoroscopy system
[NASA-CR-160568] N80-21972

FLYING PERSONNEL
The application of echocardiography to the cardiological evaluation of flight personnel
A80-32586
Abdominal echotomography - Its place in the evaluation of flight personnel
A80-32587
On the feasibility of contact lenses for flight personnel
A80-32589
Considerations regarding sudden deafness - Aeronautical incidents
A80-32591
Impedance measurement - Importance in otologic assessment of air flight personnel
A80-32592

FREEZE DRYING
The effect of variety and maturity on the quality of freeze-dried carrots. The effect of microwave blanching on the nutritional and textural quality of freeze-dried spinach
[NASA-CR-160567] N80-21982

G

GAS DENSITY
Effect of gas-mixture density on the performance of the respiratory system
A80-32232

GAS MIXTURES
Effect of gas-mixture density on the performance of the respiratory system
A80-32232

GASTROINTESTINAL SYSTEM
Reduction of the duration of restraint for the production of experimental ulcers in rats: Application to the study of protective substances
[NASA-TM-76136] N80-21016

GENERAL AVIATION AIRCRAFT
The place of the psychological factor among the causes of aircraft accidents in general aviation
A80-32583

GENETICS
Investigation of the effect of space flight factors on chromosomes in seeds
[NASA-TM-76113] N80-21962

GLANDS (ANATOMY)
The effects of restraint on uptake of radioactive sulfate in the salivary and gastric secretions of rats with pyloric ligation
[NASA-TM-76073] N80-21964

GLYCEROLS
Glycerol test in diagnosing increased intralabyrinth pressure
[NASA-TM-76110] N80-21022

GRAPHIC ARTS
Signs and display systems: Graphic design and human engineering. A bibliography with abstracts
[PB80-803158] N80-21031

H

HALOCARBONS
Formulation of a preliminary assessment of halogenated organic compounds in man and environmental media
[PB80-112170] N80-21029

HEALTH PHYSICS
Acute microwave irradiation with regard to a case recently monitored at Begin Hospital
A80-32600

HEART
Effects of hypokinesia and hypodynamia on the intraorganic arteries of the heart
[NASA-TM-76069] N80-21026

HEART DISEASES
Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography, and Cardiovascular Dynamics, Univerza v Ljubljani, Ljubljana, Yugoslavia, March 20-22, 1978
A80-29676
Direct body ballistocardiography - A 25 year survey - Landmarks in its representation of cardiac dynamics
A80-29678

HEART FUNCTION
Influence of diastolic fibre orientation on the left ventricular power generation
A80-29685
Dynamic characteristics of the thorax connected with the heart action
A80-29686
Further observations on modelling of the cardiovascular function in the electrical model
A80-29687
Cardiac output at high altitude --- Russian book
A80-30434
Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia
A80-32593
Initial dynamics of the EKG during an electrical defibrillation of the heart
[NASA-TM-76002] N80-21019

HEART RATE
Comparative examination of the pulse of both right and left carotid arteries
A80-29683
Evaluation of the pulse contour method in beat-to-beat determination of the cardiac output in small laboratory animals
A80-29684
Use of a cardioleader to monitor the heart rate of cosmonauts during physical exercises and under conditions of a low-pressure suit onboard Salyut 6
A80-30515

HELICOPTER DESIGN
Vibration transmission through different helicopter seat cushions
A80-32596

HELICOPTERS
A psychoacoustic study of impulsive helicopter noise
A80-30813

HEMODYNAMIC RESPONSES
Express-diagnostic criteria of the cardiohemodynamic efficiency of juvenile athletes
A80-32216

HEMODYNAMICS
Noninvasive access to cardiovascular dynamics: Experimental and applied; Proceedings of the Eleventh European Congress on Ballistocardiography, Noninvasive Cardiography, and Cardiovascular Dynamics, Univerza v Ljubljani, Ljubljana, Yugoslavia, March 20-22, 1978
A80-29676
Evaluation of the pulse contour method in beat-to-beat determination of the cardiac output in small laboratory animals
A80-29684

HIGH ALTITUDE ENVIRONMENTS
Cardiac output at high altitude --- Russian book
A80-30434
Sleep pattern variation during adaptation to high-altitude hypoxia
A80-32234

HISTOLOGY
The contribution of histopathology to investigations following aircraft accidents
A80-32579

HOLOGRAPHIC INTERFEROMETRY
Use of double pulse holography for vibration analysis on a human ear in vivo
A80-29359

HORMONES
Plasma cortisol levels and auditory functioning in humans exposed to short and prolonged durations of noise
N80-21018

HUMAN BODY
Preservation of equilibrium in orthograde and inverted body positions
[NASA-TM-76112] N80-21976

HUMAN FACTORS ENGINEERING
Aeromedical evaluation of aircraft accidents - Human engineering aspects
A80-31590
Psycho-social aspects of aircraft accidents
A80-31591
Signs and display systems: Graphic design and human engineering. A bibliography with abstracts
[PB80-803158] N80-21031
Human comfort response to dominant random motions in longitudinal modes of aircraft motion
[NASA-CR-159186] N80-21033
Research on new electronic display technologies
[AD-A079323] N80-21035
Establishment of the repeatability of performance of the SA103C three year old child test dummies
[PB80-112204] N80-21036

HUMAN PATHOLOGY
The contribution of histopathology to investigations following aircraft accidents
A80-32579

HUMAN PERFORMANCE
Express-diagnostic criteria of the cardiohemodynamic efficiency of juvenile athletes
A80-32216
The circadian rhythm of aerobic efficiency
A80-32231
Effect of gas-mixture density on the performance of the respiratory system
A80-32232
Functional state of the cardiovascular system following a three-day immersion and prophylactic rotations in a small-radius centrifuge
A80-32233
Reliability and information content of tests with cardioleader in cyclic types of sports
[NASA-TM-76090] N80-21975

HUMAN TOLERANCES
Investigation of transitional characteristics of the equilibrium preservation system --- human vertical posture response during acceleration
A80-29909
The psychoacoustic effects of aircraft noise on sleep - An in situ study
A80-30815
An investigation of the effects of impulse noise exposure on man - Impulse noise with a relatively low peak level
A80-30854

HYDROMECHANICS
Vibration of the basilar membrane in the mammalian cochlea
A80-31480

HYPEROXIA
Effect of normobaric hyperoxia on renal ammoniogenesis
A80-32594

HYPERTHERMIA
Cold shivering activity after unilateral destruction of the vestibular apparatus
[NASA-TM-76099] N80-21021
Metabolism and activity of zoxazolamine in white rats during forced immobilization with and without hyperthermia
[NASA-TM-76074] N80-21968

HYPODYNAMIA
Coagulating activity of the blood, vascular wall, and myocardium under hypodynamia conditions
[NASA-TM-76056] N80-21023
Effects of hypokinesia and hypodynamia on the intraorganic arteries of the heart
[NASA-TM-76069] N80-21026
The effects of restraint on uptake of radioactive sulfate in the salivary and gastric secretions of rats with pyloric ligation
[NASA-TM-76073] N80-21964
Content of lipids in blood and tissues of animals during hypodynamia
[NASA-TM-76023] N80-21967
Effect of hyperbaric oxygenation on carbohydrate metabolism protein synthesis in the myocardium during sustained hypodynamia
[NASA-TM-76012] N80-21974

HYPOKINESIA
Adrenocortical response in rats subjected to a stress of restraint by immobilization whether accompanied by hypothermia or not
[NASA-TM-76119] N80-21015
Atherosclerotic changes of vessels caused by restriction of movement
[NASA-TM-76022] N80-21020
Effects of hypokinesia and hypodynamia on the intraorganic arteries of the heart
[NASA-TM-76069] N80-21026
Effects of motor patterns on water-soluble and membrane proteins and cholinesterase activity in subcellular fractions of rat brain tissue
[NASA-TM-76115] N80-21963
Changes of gas metabolism, gas homeostatis and tissue respiration in rats during prolonged hypokinesia
[NASA-TM-75982] N80-21966
Metabolism and activity of zoxazolamine in white rats during forced immobilization with and without hyperthermia
[NASA-TM-76074] N80-21968
Age related changes in the bone tissue under conditions of hypokinesia
[NASA-TM-76019] N80-21971
Effect of syrepar and oxaphenamide on liver function in experimental hypokinesia
[NASA-TM-76011] N80-21973

HYPOTHERMIA
Adrenocortical response in rats subjected to a stress of restraint by immobilization whether accompanied by hypothermia or not
[NASA-TM-76119] N80-21015

HYPOXIA
Fermentative activity of neutrophil leukocytes in rats under conditions of hypoxic hypoxia
A80-30457
Sleep pattern variation during adaptation to high-altitude hypoxia
A80-32234
Central field of vision and electroculography in moderate hypoxia
A80-32588
Investigation of the cardiac inotropic effect occurring at the onset of hypoxic hypoxia
A80-32593

I

ILLINOIS
Marine traffic data of Chicago, Illinois and South Shore of Lake Michigan
[AD-A080060] N80-21979

IMAGE CONTRAST
Suprathreshold processing of complex visual stimuli - Evidence for linearity in contrast perception
A80-32413

IMAGING TECHNIQUES
Development of a stereofluoroscopy system
[NASA-CR-160568] N80-21972
IMMOBILIZATION
Effect of immobilization stress on the level of macroergic phosphates in the blood of rats
[NASA-TM-76021] N80-21959
Effects of immobilization articular cartilage: Autohistoradiographic findings with S35
[NASA-TM-76070] N80-21961
Metabolism and activity of zoxazolamine in white rats during forced immobilization with and without hyperthermia
[NASA-TM-76074] N80-21968
IMMUNOLOGY
On the cellular autoimmune mechanism for eliminating erythrocytes normally and under extreme influences
[NASA-TM-75735] N80-21014
IMPEDANCE MEASUREMENTS
Impedance measurement - Importance in otologic assessment of air flight personnel
A80-32592
INDUSTRIES
Advanced industrial robot control systems
[PB80-106396] N80-21986
INFRARED ASTRONOMY
The identification of the 3-micron spectral feature in galactic infrared sources --- possible bacteria existence in circumstellar and interstellar dust
A80-30342
INSTRUMENT COMPENSATION
Compensation for distortion in eye-movement monitors
A80-29178
INTERSTELLAR EXTINCTION
The identification of the 3-micron spectral feature in galactic infrared sources --- possible bacteria existence in circumstellar and interstellar dust
A80-30342
INTERSTELLAR MATTER
The identification of the 3-micron spectral feature in galactic infrared sources --- possible bacteria existence in circumstellar and interstellar dust
A80-30342

J

JOINTS (ANATOMY)
Effects of immobilization articular cartilage: Autohistoradiographic findings with S35
[NASA-TM-76070] N80-21961

K

KINESTHESIA
Preservation of equilibrium in orthograde and inverted body positions
[NASA-TM-76112] N80-21976
